

McCarren Boulevard Safety Management Plan

The purpose of a Safety Management Plan (SMP) is to conduct a safety-focused corridor study concentrated towards all road users and to include collaboration with stakeholders and the public. A SMP includes the development of short, mid, and long-range transportation safety improvement projects that incorporate traffic studies, access management, crash analyses, benefit-cost analysis, public and stakeholder input, and other impacts to all road users. The SMP process is consistent with the Nevada Strategic Highway Safety Plan's overall goals of zero fatalities and reducing serious injuries on Nevada's roadways.
