## Acronyms and Abbreviations

NDOT            Nevada Department of Transportation

## 1.0 Introduction

Safe and sufficient truck parking has long been a need in the United States. Whether for a quick stop near an urban area to wait for congestion to clear or a business' delivery window to open, or an overnight break to sleep in the middle of a cross-country trip, truck parking is a key concern for:

- Commercial Motor Vehicle drivers;
- Industries that rely on efficient truck-deliveries;
- Consumers who increasingly order goods online and demand expedited delivery service; and
- Government agencies who regulate the industry, enforce statutes, pass zoning ordinances, and build and maintain highways and parking infrastructure.

In response to this need, the Nevada Department of Transportation (NDOT) is conducting The Nevada Truck Parking Implementation Plan which will develop a plan for expanding, improving, and integrating freight truck parking and truck parking communications systems in response to rising demand, changing hours of service requirements, and safety standards defined in Jason's Law. When implemented, these improvements will provide adequate and safe public truck parking where it's most needed, full-service private truck facilities, and real-time truck parking availability information.

This Implementation Plan consists of the following key tasks:

- Stakeholder Outreach and Coordination;
- Data Collection;
- Needs Assessment;
- Recommendations;
- Implementation Plan; and
- Final Report.

This technical memo is part of the Needs Assessment task, and is focused on identifying and quantifying the existing and future truck parking supply in Nevada.

Just like any other vehicle on the road, trucks need a safe, reliable place to park while waiting for a delivery bay at a distribution center to open, rush hour traffic to subside, a mountain pass to re-open after an incident, or shutting down for an overnight rest break to meet federal requirements. To calculate supply of available parking needed to meet all of these needs, the project team pulled data from a number of resources including:

- NDOT Truck Parking Inventory<sup>1</sup>;
- Nevada Rest Areas<sup>2</sup>;
- Trucker Path<sup>3</sup>;
- ALLSTAYS<sup>4</sup>;
- American Truck Parking<sup>5</sup>;
- Input from NDOT District engineers and maintenance staff;
- Input from Nevada Highway Patrol Commercial Enforcement Section; and
- Input from the State Freight Advisory Committee.

Authorized Parking: Pilot Flying J – Winnemucca  
Source: Cambridge Systematics, Inc.

Locations were then corroborated using either Google Earth/Google Maps or by field reviews conducted by the team.<sup>6</sup>

This document consists of the following sections:

- Section 1 – Introduction;
- Section 2 – An overview of key truck parking attributes;
- Section 3 – An analysis of truck parking capacity at the statewide and corridor level; and
- Appendix A – A complete inventory of truck parking locations in Nevada.

<sup>4</sup> <https://allstays.com/>

<sup>5</sup> <http://www.americantruckparking.com/>

<sup>6</sup> Note that 100 Walmart parking locations are identified in the map but shown as “0” spaces and not included in the capacity counts as their status and availability for use by truckers varies considerably from location to location.

## 2.0 Parking Attributes

The total truck parking inventory can be sub-divided based on a number of different attributes. This section briefly describes the key attributes used to differentiate between types of parking.

### 2.1 Authorized and Unauthorized

Authorized parking lots are locations where trucks are explicitly allowed to park. These can be public or private locations and can have a range of amenities (e.g., bathrooms, showers, food options, fuel, wireless internet) and security (e.g., lighting, fencing) or nothing more than an area designated for parking.

Unauthorized locations are places where trucks routinely park, but the area is not designed for truck parking and long-term truck parking is not legal. It is important to note that while similar from a legal standpoint, from a practical approach not all unauthorized parking is the same. For example, trucks parking on the side of a busy highway in a small town and trucks parking in a gravel area at the end of a dead-end road have different safety, infrastructure, and community impacts. An example of unauthorized parking is shown in Figure 2.1.

While this analysis attempted to identify commonly used unauthorized parking locations in the state where several trucks or more might be parked, it did not identify all possible locations with unauthorized truck parking activity since this list is potentially endless and shifting constantly.

**Figure 2.1** Unauthorized Parking, I-15 Valley of Fire Off-Ramp Near Moapa Paiute Travel Plaza

Source: Cambridge Systematics, Inc.

### 2.2 Paved and Unpaved

Paved lots are those where asphalt or concrete surfaces cover the locations where trucks are parking. While trucks can and do use both paved and unpaved areas to park, the information is useful when considering costs to enhance the facility and in operations and maintenance planning.

## 2.3 Marked and Unmarked

This criteria identifies if the parking area is striped for truck parking. Stripes help drivers know where parking is permitted at a facility, and allow for a more precise estimate of site capacity. Marked lots are typically paved, though there may be additional parking available adjacent to a paved lot that is unmarked and unpaved. Unmarked lots may be paved or unpaved.

## 2.4 Private and Public

Public facilities include publically owned and operated rest areas, typically available for auto and truck use; truck inspection stations that either offer designated parking or allow truck parking when not in use; and designated truck pull-out areas that may or may not be paved and typically don't offer any services. Some public areas may or may not formally allow truck parking, such as pull-outs for brake check areas and for snow chain installation and removal.

Many private businesses offer truck parking as a service to drivers to attract their business and the revenue associated with selling fuel, food, and other commodities and services. The most common are privately owned and operated truck travel plazas, but others include hotels, casinos, convenience stores, restaurants, and other facilities.

An example of a public, authorized, unpaved, and unmarked lot is shown in Figure 2.2.

**Figure 2.2 Authorized, Public, Unpaved, Unmarked Spaces at Truck Parking Pull-out (I-15, Top of Mormon Mesa)**

Source: Cambridge Systematics, Inc.

### 3.0 Truck Parking Capacity

The following sections provide a summary of state level truck parking and then explore truck parking on each of the critical freight corridors in the state.

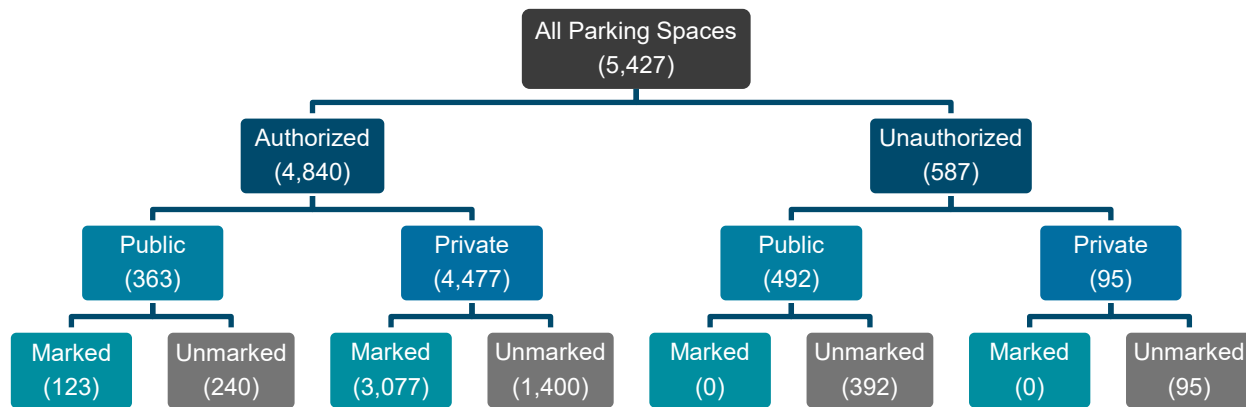

#### 3.1 Statewide Capacity

Including private truck stops and other businesses that cater to truck drivers, public rest areas, and commonly used unauthorized locations such as brake check areas, inspection sites, and roadside unpaved areas, there are approximately 5,427 truck parking spaces at 170 locations in Nevada.<sup>7</sup> Of these, approximately 4,840 spaces (90 percent) at 104 locations offer authorized parking with the remaining 587 (10 percent) unauthorized parking spaces spread between 65 separate locations. There are 20 private truck stops in the state with at least 100 parking spaces each which drives the large difference in parking spaces per location.<sup>8</sup> The largest truck parking location in the state is the Petro Shopping Center in Sparks with 400 spaces. A list of all truck parking locations in the state is found in Appendix A.

Figure 3.1 below provides a flowchart showing the breakdown in spaces by the various attributes described above. Marked spaces at privately operated, authorized truck parking locations comprise the greatest group, followed by a large number of unmarked spaces at privately operated, authorized locations.

Truck parking locations in Nevada are shown statewide in Figure 3.2 differentiated by authorized and unauthorized locations as well as the number of spaces available. The greatest concentrations of authorized parking are in the southern Nevada/Las Vegas and Northwest Nevada/Reno-Sparks-Carson City metropolitan areas. Truck parking in these regions of the state are shown in Figure 3.3 and Figure 3.4.

**Figure 3.1 Truck Parking Capacity Categories**

<sup>7</sup> Note, this analysis generally treats parking on opposite sides of a divided highway as separate locations

<sup>8</sup> 43.5 spaces/location for authorized parking, 8.1 spaces/location for unauthorized parking

Figure 3.4 Northwestern Nevada Detail – Nevada Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

## 3.2 Key Freight Corridors - Truck Parking Capacity

Based on the Nevada State Freight Plan and in consultation with NDOT, the supply and demand analysis was limited to critical freight corridors in Nevada. Table 3.1 provides an overview of parking in these corridors; a more detailed discussion of truck parking capacity in each corridor is discussed below. It is important to note that corridors often overlap, sharing a route for several miles. Parking located where two routes overlap or intersect may be counted in multiple corridors in the below discussion.

**Table 3.1 Freight Corridor Truck Parking Capacity Summary**

Corridor	Direction	Corridor Length (mi)	Parking Locations	Authorized Spaces	Unauthorized Spaces	Total Spaces
I-15 (and I-215)	North-South	125	28	1,538	77	1,615
I-80	East-West	410	50	2,247	79	2,326
U.S. 6	East-West	306	20	164	95	259
U.S. 50	East-West	409	12	372	8	380
U.S. 93/93A and SR 318	North-South	520	33	1,178	115	1,293
U.S. 95/95A	North-South	647	54	1,156	266	1,422
U.S. 395 (and I-580)	North-South	85	5	30	16	46

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.1 I-15 Corridor

The I-15 corridor traverses Southern Nevada through the most heavily populated portion of the state, from Primm at the California border to Mesquite at the Arizona border, approximately 125 miles to the northeast. I-15 is a key trade corridor and vital linkage in the economies of the western U.S. and the entire nation, with some of the largest economic and population centers relying on the I-15 for inter-state and inter-regional mobility. Anchored in the south by Southern California, the I-15 Corridor is a principal corridor linking coastal ports to inland population centers and provides connection to other major east-west highways, including I-10, I-40, I-70, and I-80. The Bruce Woodbury Beltway (I-215 and Clark County 215) serves as a beltway around the north, west, and south of Las Vegas metropolitan area. I-515 is collocated with US 93 and US 95; parking along I-515 will be discussed as part of the US 93 and US 95 corridors.

The largest facility on the corridor is Morton's Valero Travel Plaza in North Las Vegas with approximately 225 spaces, shown in Figure 3.5. Table 3.2 provides an overview of parking in the I-15 corridor and Figure 3.6 shows the truck parking locations. The greatest concentration of parking is in the densely populated urban area from Blue Diamond Road to the Las Vegas Speedway, with approximately 956 truck parking spaces at 10 private facilities.

**Table 3.2 I-15 Corridor Truck Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	20	1,538	1,498/40	1,498/40
Unauthorized	8	77	10/67	9/68
Total	28	1,615	1,508/107	1,507/108

Source: NDOT, Analysis by Cambridge Systematics, 2018.

Figure 3.6 I-15 Corridor Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.2 I-80 Corridor

I-80 stretches approximately 410 miles across northern Nevada between the California border west of Reno to West Wendover and the Utah border. McCarran Boulevard (SR 659) provides a beltway around Reno and Sparks. I-80 provides a critical east-west connection between the San Francisco Bay area and the Intermountain West and Midwest including major metropolitan areas such as Salt Lake City, Denver, Kansas City, Chicago, Minneapolis, and points further east.

Table 3.3 provides an overview of parking in the corridor. The largest parking facility in the western segment, and the State, is a Petro Shopping Center in Sparks with approximately 400 spaces, shown in Figure 3.7. The largest facility in the eastern segment is the Pilot Travel Center in West Wendover with approximately 125 spaces. Figure 3.8 shows the western portion of the corridor from California to US 95 in Winnemucca and Figure 3.9 shows the corridor from Winnemucca east to Utah. Concentrations of truck parking supply exist on the eastern edge of Sparks, in Fernley, Winnemucca (intersection with US 95) and Wells (intersection with US 93).

**Table 3.3 I-80 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	36	2,247	2,084 /163	2,132/115
Unauthorized	14	79	5/74	24/55
Total	50	2,326	2,089/237	2,156/170

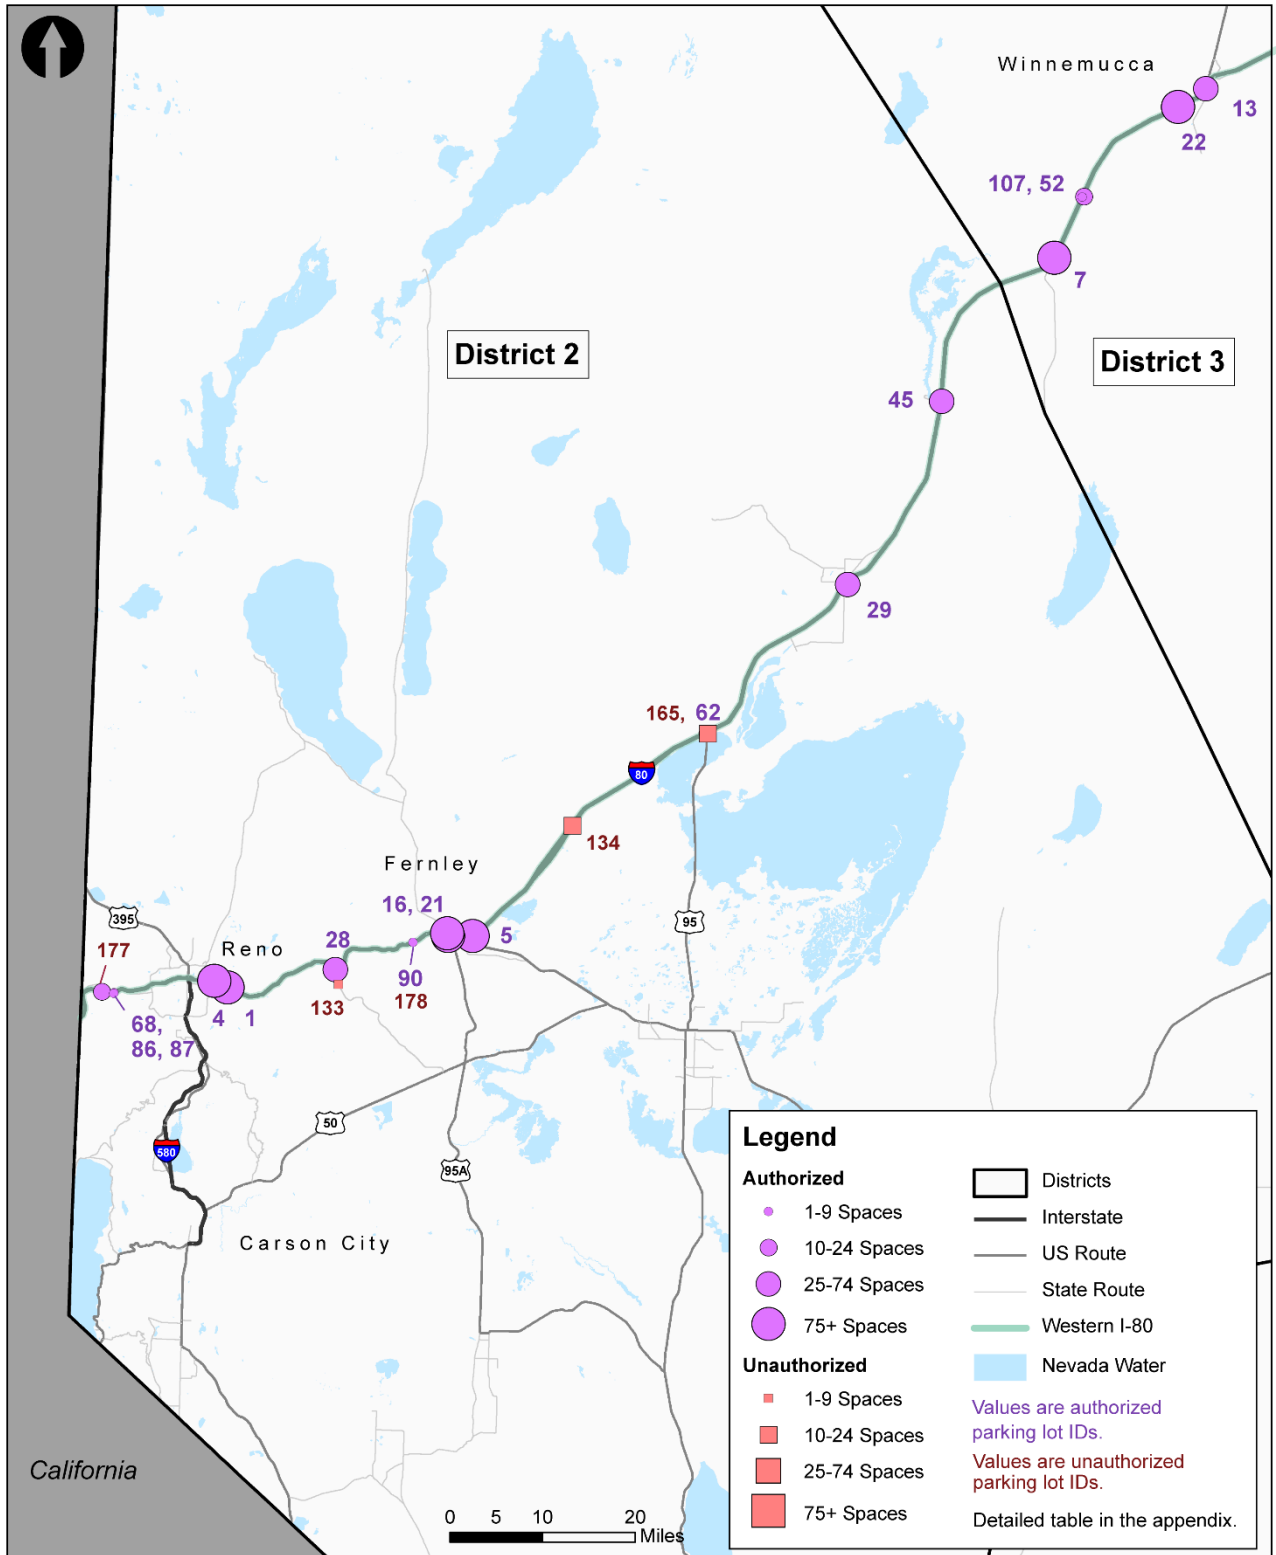

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.3 US 6 Corridor

US 6 stretches for approximately 306 miles across central Nevada, from Boundary Peak near the California border to Baker near the Utah border. The highway crosses a series of desert mountain ranges and valleys. It passes through the cities of Tonopah and Ely, and joins with US 95 (the most heavily traveled portion of US 6) and US 50 in some places, as well as with smaller state routes.

Table 3.4 provides an overview of parking in the corridor. Nearly half of the truck parking supply along this route comes from three parking facilities in Ely (where the route intersects with US 90 and US 50), with the largest two facilities each having 50 spaces. Figure 3.10 shows the R Place Food truck stop, one of the three parking options on US 6 in Ely. Figure 3.11 is a map of all parking locations in the corridor.

**Table 3.4 US 6 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	8	164	148/16	68/96
Unauthorized	12	95	0/95	28/67
Total	20	259	148/111	93/163

Figure 3.11 US 6 Corridor Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.4 US 50 Corridor

US 50 is a 409 mile east-west corridor that runs through the central part of the state. On the west side, it enters Nevada at Lake Tahoe, and on the east side, it enters Utah near Baker. Nicknamed the “Loneliest Road in America”, US 50 traverses varied terrain including mountain ranges and desert valleys and passes through Carson City, Fallon, and Ely. There is one alternate route (US 50A) which runs from Silver Springs north to Fernley (concurrent with US 95A), then turns southeast and rejoins US 50 west of Fallon.

Table 3.5 provides an overview of parking in the corridor. The majority of truck parking is found in the western segment in Fernley. The Flying J Travel Center and the Pilot Travel Center have approximately 100 spaces. On the eastern segment, the Silver Sage Travel Stop and Love’s Ely located in Ely provide approximately 50 spaces each. There are no parking opportunities on US 50 between the California border and Fallon. Figure 3.12 shows the Eureka Rest Area, one of the public truck parking options on this corridor. Figure 3.13 illustrates all of the truck parking locations in the corridor.

**Table 3.5 US 50 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	10	372	358/14	304/68
Unauthorized	2	8	0/8	3/5
Total	12	380	358/22	307/73

**Figure 3.12 Eureka Rest Area, US 50**

Source: Google Maps

Figure 3.13 US 50 Corridor Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.5 US 93 Corridor

US 93 is a major north-south corridor that runs in the eastern part of Nevada. It spans 520 miles, stretching from the Arizona border in the south, through Las Vegas and Ely, to the Idaho border in the north. Within the Las Vegas metropolitan area, it joins with I-11, I-515, and/or I-15. At Crystal Springs, State Route 318 continues straight north while US 93 turns east before returning north. SR 318 is included as part of the corridor and is a key truck route in the state—NDOT data indicates that this is the preferred route over US 93 for vehicles in the corridor.<sup>9</sup>

Both US 93 and State Route 318 continue north with SR 318 ending at US 6 and US 93 joining US 50/US 6 between Majors Place and Ely. At Lages Station, US 93 splits into two forks with US 93A traveling northeast and ending at I-80 in West Wendover. US 93 continues north through Wells and an interchange with I-80 until crossing into Idaho at Jackpot.

Truck parking for US 93, US 93A, and SR 318 are included in Table 3.6. Truck parking supply is fairly abundant along this major corridor, with over 1,200 spaces, however the majority of these are located at junctions with I-15 and I-80. The more rural portions of US 93 have few spaces, some of which is found at unauthorized pull-outs, as shown in Figure 3.14 in Alamo. The largest parking facility in the southern segment is the Hoover Dam Lodge Truck Parking, with approximately 200 spaces. The largest facility in the northern segment is the Pilot Travel Center in West Wendover with approximately 125 spaces. Table 3.6 and Figure 3.15 provide an overview of truck parking in this corridor.

The southern segment of US 93 between Arizona and Las Vegas became part of I-11 in 2018, highlighting the need to supply adequate truck parking in the corridor.

**Table 3.6 US 93 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	21	1,178	1,138/40	779/399
Unauthorized	11	115	10/105	35/80
Total	32	1,293	1,148/145	814/479

<sup>9</sup> Approximately 350 AADTT for SR 318 from Crystal Springs to US 6 versus approximately 35 AADTT on US 93 from Crystal Springs to Panaca. Count of 4+ axle trucks.

Figure 3.15 US 93 Corridor Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.6 US 95 Corridor

US 95 is a major north-south corridor that runs in the western part of Nevada, stretching for approximately 647 miles. At the south end, it enters Nevada from the California border, passes through the Las Vegas metropolitan area, then continues northward until it reaches the Oregon border. US 95 runs concurrent with I-11, I-515, and US 93 from southeast of Henderson to I-15. From I-15 to I-80 much of US 95 is the preferred future I-11 corridor.<sup>10</sup> Between Tonopah and Coaldale Junction, US 95 joins US 6. At Schurz, the highway splits into two; the western fork continues toward Fernley while the eastern fork continues to I-80 north of Fallon. US 95 runs concurrently with I-80 east to Winnemucca before turning north and entering Idaho.

This major corridor has nearly 1,500 truck parking spaces. Truck parking supply is spread throughout the corridor, but the largest facilities tend to be where highways converge. In the northern segment, the largest parking facilities are the TA Travel Center of America in Mill City with approximately 152 spaces, the Flying J Travel Center in Fernley with 100 spaces, and the Pilot Travel Center in Fernley with 100 spaces. In the central segment, the largest facility is the Stagecoach Hotel & Casino in Beatty, with approximately 100 spaces. In the southern segment, the largest facility is the Railroad Pass Hotel & Casino in Henderson with 94 spaces, shown in Figure 3.16. Table 3.7 provides a summary of the corridor truck parking supply and Figure 3.17 shows the locations of these facilities.

**Table 3.7 US 95 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	31	1,156	1,059/97	965/191
Unauthorized	23	266	60/206	120/146
Total	54	1,422	1,119/303	1,085/337

Source: NDOT, Analysis by Cambridge Systematics, 2018.

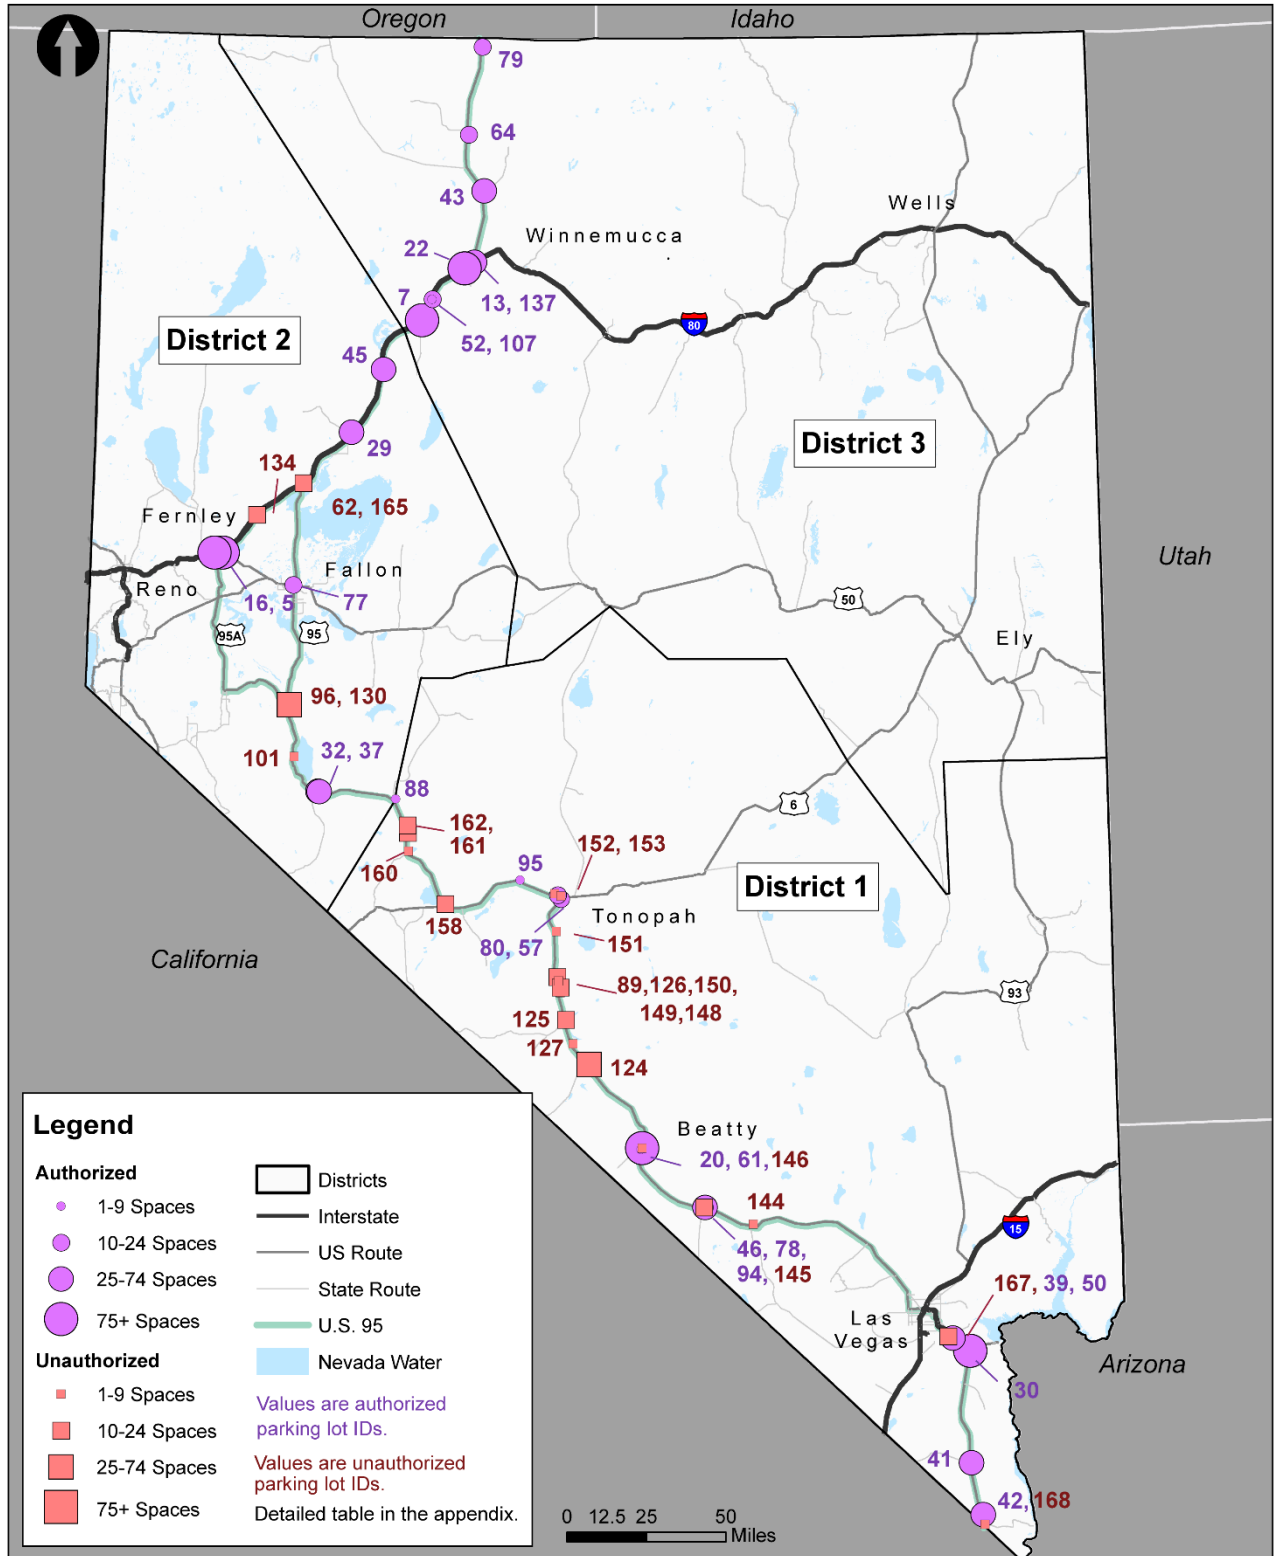

**Figure 3.16 Railroad Pass Truck Stop, Henderson**

Source: Cambridge Systematics, Inc.

<sup>10</sup> The Fixing America’s Surface Transportation Act, or FAST Act, formally designates Interstate 11 throughout Arizona. It states that the I-11 corridor will generally follow Interstate 19 from Nogales to Tucson, Interstate 10 from Tucson to Phoenix, and US 93 from Wickenburg to the Nevada state line. From there, the Interstate 11 corridor extends north through Nevada, and is designated as an interstate highway north of Las Vegas, through Reno, connecting to Interstate 80.

Figure 3.17 US 95 Corridor Truck Parking Locations

Source: NDOT, Analysis by Cambridge Systematics, 2018.

### 3.2.7 US 395/I-580

US 395/I-580 is an 85 mile north-south highway on the western edge of Nevada that runs along the Sierra Nevada mountain range. The northern segment enters Nevada from the California border at Cold Springs, passing through Reno and Carson City, and the southern segment ends near Topaz Lake at the California border. US 395/I-580 offers an alternative to I-5 for trucks traveling between southern California and Reno and points north and east.

There are fewer than 50 total truck parking spaces located on this highway, though additional facilities are available on I-80 in Sparks, just east of the corridor. Two-thirds of the truck parking supply (30 parking spaces) is found at the Wa She Shu Travel Plaza facility in Gardnerville, shown in Figure 3.18. Other unauthorized parking spots can be found at truck inspection stations. Table 3.8 summarizes truck parking in this corridor and Figure 3.19 highlights truck parking locations.

**Table 3.8 US 395/I-580 Corridor Parking Capacity**

Attributes	Parking Locations	Parking Spaces	Private/Public Spaces	Paved/Unpaved Spaces
Authorized	1	30	30/0	30/0
Unauthorized	4	16	0/16	5/11

### 3.3 Future Capacity

In addition to existing capacity, there are three known projects which will expand the amount of authorized parking in the state. Two projects are already under construction, the third is proposed only:

- Eagles Landing Travel Center – I-15 at Lower Flat Top Drive (west side of Mesquite), shown in Figure 3.20. This facility will include a Pilot Flying J truck stop and is anticipated to add approximately 80 truck parking spaces once complete in the fall of 2018.<sup>11</sup>
- Golden Gate Travel Plaza – on SR 535 at Exit 298 of I-80 (west side of Elko), shown in Figure 3.21. There are approximately 7.8 acres designated for the truck stop facility.<sup>12</sup> There is no known completion date.
- Loves Travel Stop – Proposed construction on SR 289 at exit 176 of I-80 (west side of Winnemucca), shown in Figure 3.22. Details about this project are unknown.

Locations and pictures of construction are shown in the figures below.
