# Previous Study Assessment Summary

## Previous Study Assessment Summary

The following technical memorandum summarizes the review of recently completed studies along the Mount Rose Highway Corridor. The review has been conducted to establish previously identified concerns, solutions, commitments, and overall evaluation of the corridor. This review is part of the existing condition evaluation for the Mount Rose Corridor Study being conducted by NDOT. The study is being performed to identify a long-term transportation vision and potential short-term and long-term improvements and policies in alignment with the identified vision. The study limits are along State Routes 431 and 341 extending from the Geiger Grade roundabout (Veteran's Parkway) on the east to Douglas Fir Drive on the west.

The following provides a summary of previous studies reviewed including:

- Name of study
- Agency responsible for the study
- Date of report
- Brief study description
- Items/suggestions that can be carried forward and considered as part of the current and on-going Mount Rose Corridor Study

### **1. Road Safety Assessment SR 431 from WA MP 18.694 to WA MP 23.050**

#### [1.1 Agency:](#)

NDOT

#### [1.2 Date:](#)

August 2018

#### [1.3 Brief Description](#)

Road Safety Assessment (RSA) performed in July 2018. Focused on intersection improvements to improve safety for uncontrolled left turns, on-and off side streets, updates to signing and striping, and installation of lighting.

#### [1.4 Items/ Suggestions to be carried forward into Mt. Rose Corridor Study](#)

Lighting update/consistency/conformance with current standards. Add DMS warning system package for speed and congestion warning throughout the corridor. Reinstall rumble strips per NDOT standards. Provide access restrictions and use of median islands throughout the corridor. Use of alternative pavement markings for delineation of bike lanes near right turn lanes. Remove emergency signal between Callahan and Bordeaux. Callahan Road channelizing islands. Thomas Creek modifications. Butch Cassidy extension at Thomas.

**2. Intersection Control Evaluation – Mt. Rose Highway and Callahan Road**

**2.1 Agency:**

NDOT

**2.2 Date:**

October 2018

**2.3 Brief Description**

Intersection Control Evaluation to identify preferred improvements to the Mt. Rose Highway and Callahan Road intersection.

**2.4 Items/ Suggestions to be carried forward into Mt. Rose Corridor Study**

Zero warrants met for a traffic signal. Reviewed a R-cut, traffic signal, and roundabout. Recommended alternative was a roundabout.

**3. Traffic Signal Warrant Study SR431 @ IR580 NB Off-Ramp**

**3.1 Agency:**

NDOT

**3.2 Date:**

January 2020

**3.3 Brief Description**

Signal warrant study conducted by NDOT for a signal at SR 431 and IR580 NB off-ramp.

**3.4 Items/ Suggestions to be carried forward into Mt. Rose Corridor Study**

Two warrants are met justifying the installation of a traffic signal.

**4. Mount Rose Scenic Byway Corridor Management Plan**

**4.1 Agency:**

Washoe County

**4.2 Date:**

2015

**4.3 Brief Description**

CMP developed for the corridor to create a platform for a coordinated approach between agencies and stakeholders to develop viable solutions and future collaborations.

**4.4 Items/ Suggestions to be carried forward into Mt. Rose Corridor Study**

Suggested looking at pedestrian crossings at Callahan Ranch Rd, Bordeaux, and Joy Lake. Park and Ride near Joy Lake Road. Reflects many of the existing improvements west of Wedge Parkway. Proposed a collector road from Wedge to Callahan. Scenic Byway signage proposed.

**5. South Meadows Multimodal Transportation Study**

**5.1 Agency:**

RTC

**5.2 Date:**

April 2020

**5.3 Brief Description**

Multimodal study that evaluated the transportation network in the South Meadows area included along SR 431 from the Geiger Grade roundabout to I-580.

**5.4 Items/Suggestions to be carried forward into Mt. Rose Corridor Study**

Potential failure at Virginia/Old 395 and Geiger Grade roundabout in 2040. Proposed ped improvements from Thomas Creek to Virginia). Convert Veterans roundabout into a traffic signal. Triple SB left @ S. Virginia and Veterans. Geiger grade realignment. Widen Veteran's Parkway to six lanes from Geiger to Virginia.

# Multimodal Planning Technical Memorandum

## Multimodal Planning Memorandum

This corridor planning effort for SR 431/Mount Rose Highway will review existing and planned conditions along the approximate 10-mile segment of Mount Rose Highway from the Geiger Grade roundabout (Veteran's Parkway) on the east to Douglas Fir Drive on the west to develop a range of prioritized improvements along the corridor. The study is being performed by NDOT to identify a long-term transportation vision and potential short-term and long-term improvements and policies in alignment with the identified vision.

This memo describes the existing and multimodal conditions along the Mount Rose Highway corridor, including existing and planned public transportation, bicycle lanes/paths, and pedestrian facilities.

### Public Transportation

RTC regional connector (Express bus – Route 395) is the only public transportation service along Mount Rose Highway, and only operates on Mount Rose for a short segment to serve the Summit Mall at an established park-and-ride. This is an intercity route connecting the RTC 4th Street Station in Reno and Little Lane at NDOT in Carson City. The service operates six times a day (three times in the morning and three times in the afternoon) during weekdays on both directions. There is no service on weekends and holidays.

Tahoe Truckee Area Regional Transportation (TART) is planning to extend a transit line from Lake Tahoe/Truckee Area to Reno-Tahoe International Airport that travels along the Mount Rose Corridor, connecting north via I-580. This project is in the Regional Transportation Plan (RTP) for 2045.

Because of the large amount of recreational traffic traveling between the Reno-Sparks area and Lake Tahoe, “informal” park-and-rides have popped up in various locations, facilitating carpooling, such as at the Galena Junction Shopping Center at Wedge Parkway.

### Bicycle Facilities

Because Mount Rose Highway is a designated Scenic Byway, the corridor is attractive to bicyclists. Bicycle facilities vary throughout the corridor:

- A separated, shared use path is located on the north side of the corridor from S. Virginia Street to Wedge Parkway
- Wide shoulders with some bike markings are provided in both directions from Wedge Parkway to Timberline Road.
- From Timberline to Douglas Fir, the corridor narrows with a minimal (approximately two-foot) shoulder.

Bicycle traffic often crosses Mount Rose Highway at Callahan Road, and just east of there. Currently, no expansions or improvements to the bicycle network is planned.

## **Pedestrian Facilities**

There are three main types of pedestrian facilities along the Mount Rose corridor, as described below.

### *Sidewalks*

There are limited sidewalk facilities along most of the Mount Rose Corridor. Pedestrians share a multi-use path with bicyclists on the north side of the corridor between S. Virginia Street and Wedge Parkway. Sidewalks are also provided on both sides of the corridor between Veterans Parkway and S. Virginia Street.

### *Crosswalks*

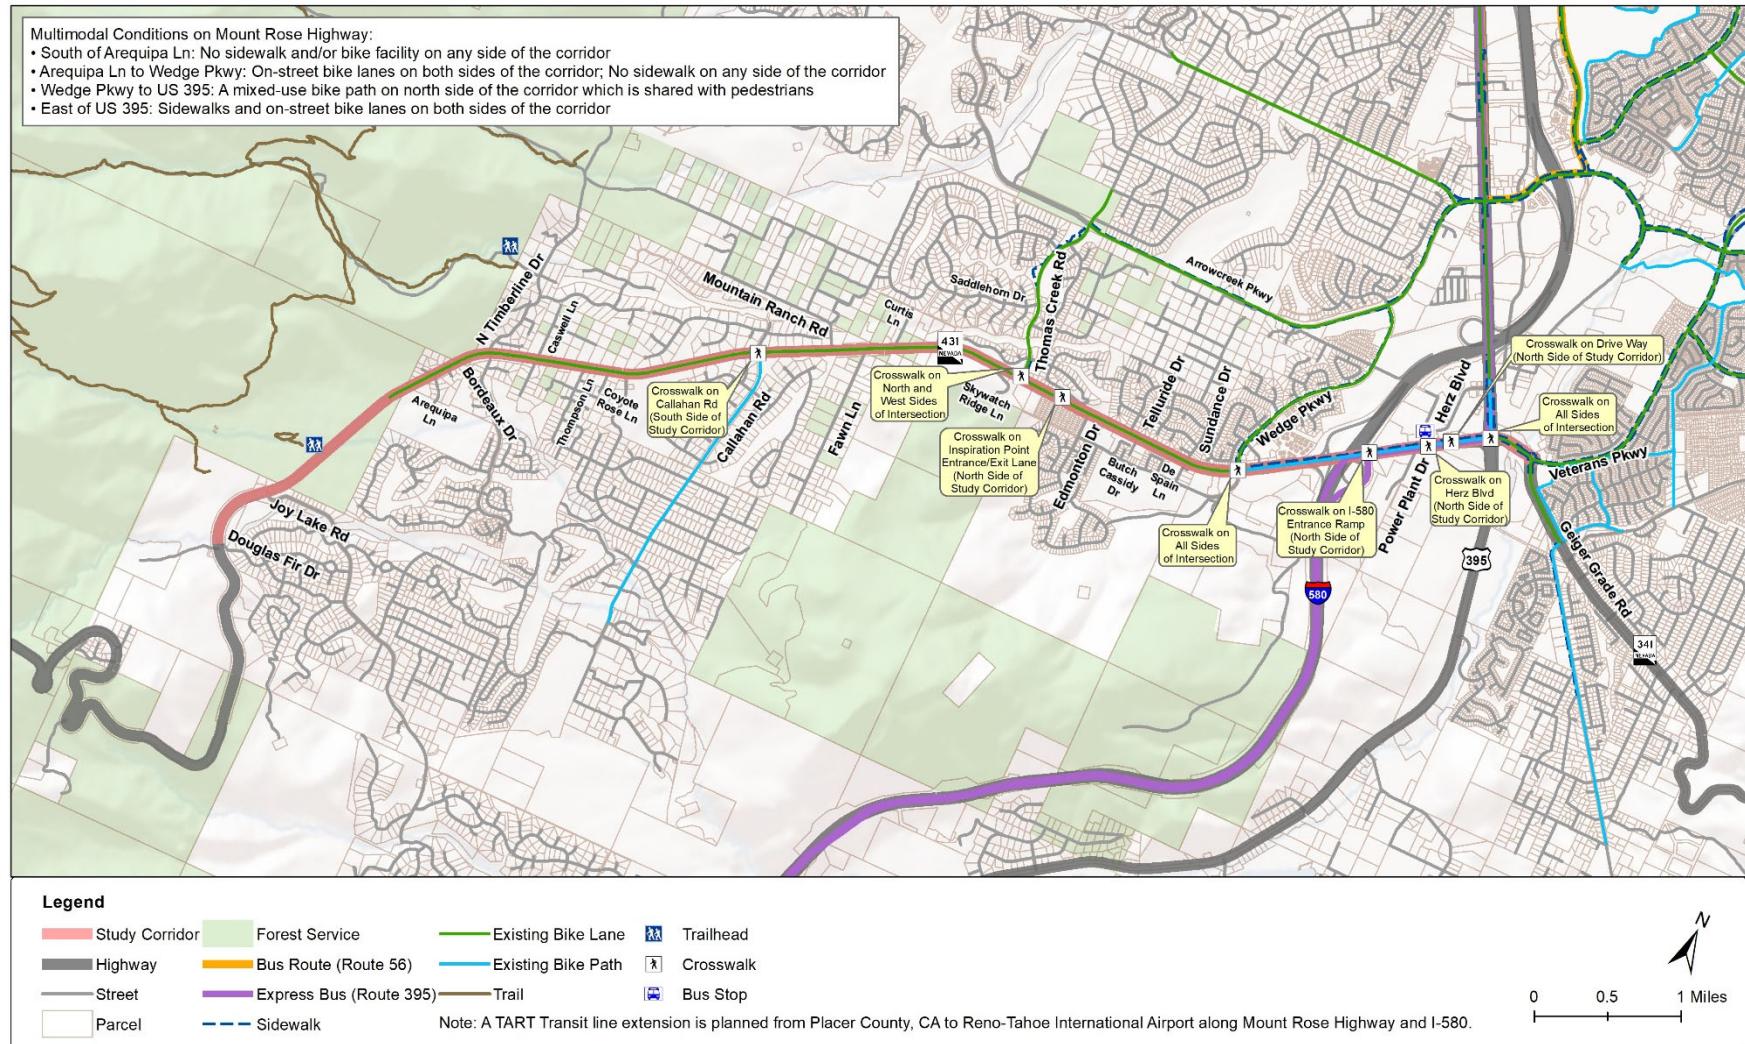

There are two intersections along Mount Rose Highway in which have fully directional crosswalks: S. Virginia Street and Wedge Parkway. All other crossings are limited, with crosswalks usually provided only on one side of the street.

### *Trails*

There are numerous trails on the north side of Mount Rose Highway. Most are not located directly on the highway, with the exception of the Jones Creek Trailhead located in the vicinity of Galena Creek Visitor Center. There is a desire to have a grade separated crossing near this trailhead, somewhere between Joy Lake Road and Douglas Fir.

## MT. ROSE HIGHWAY CORRIDOR PLAN

### Multimodal Features

# Land Use Planning Technical Memorandum

## Land Use Planning Memorandum

This corridor planning effort for SR 431/Mount Rose Highway will review existing and planned conditions along the approximate 10-mile segment of Mount Rose Highway from the Geiger Grade roundabout (Veteran's Parkway) on the east to Douglas Fir Drive on the west to develop a range of prioritized improvements along the corridor. The study is being performed by NDOT to identify a long-term transportation vision and potential short-term and long-term improvements and policies in alignment with the identified vision.

This memo describes the existing and planned land use conditions along the Mount Rose Highway corridor, along with any anticipated changes that may impact travel patterns and/or traffic operations. Maps of existing and planned land uses are located at the end of this memo.

### Existing Land Use

Land uses along the Mount Rose corridor vary, but are primarily comprised of clusters of residential development, with a mix of both single-family and multi-family housing, commercial development, and large tracts of vacant land. Much of the commercial and office development are located on the northern half of Mount Rose Highway, generally north from Edmonton Drive. Between Edmonton Drive and Douglas Fir Drive, the corridor is much more residential in nature, mixed with parcels of vacant land and Forest Service.

Multi-family residential is scattered throughout the Mount Rose corridor, with a majority of complexes east of Wedge Parkway. Several complexes within the corridor are home consortium projects, which include up to two percent of affordable housing units.

Near the junction with I-580 are two large commercial centers: The Summit Reno outside shopping mall at S. Virginia Street/Veterans Parkway, and the Galena Junction shopping center at Wedge Parkway. The University of Nevada, Reno – Redfield Campus is located south of Mount Rose at Wedge Parkway. To the west are several medical office buildings, including the Summit Surgery Center.

Located just south of Mount Rose Highway and off Butch Cassidy Drive, are Galena High School and Doral Academy Reno, a charter K-8 school. While these are the only schools directly off the corridor, Sage Ridge School – a private grades 3-12 college prep school, Marce Herz Middle School, and Hunsberger Elementary School, are located off Arrowcreek Parkway, parallel to Mount Rose, but connected by Thomas Creek Parkway.

Mount Rose crosses a large tract of the Toiyabe National Forest, with pockets of forest service land crossing both sides of the corridor. The Galena Creek Recreation Area/Galena Creek Regional Park is located at the southern end of the study area, with a trailhead right off the roadway.

### Planned Land Use

Planned land uses, as defined in the City of Reno's Reimagine Reno Master Plan and Washoe County's Master Plan, including subarea plans, maintain the trends that currently exist: lower density

residential/forest lands to the south, residential and community land uses along the central segment, and a more diverse mix of uses closer to I-580 and US 395.

### *City of Reno*

The study corridor within the City of Reno is the area primarily east of Wedge Parkway, but also includes educational facilities south of Butch Cassidy Drive. Overall, future land uses are not expected to change much from today. This area includes two large retail/commercial centers (northeast and northwest of Mount Rose/I-580), along with educational facilities clustered to the southwest. The University of Nevada, Reno – Redfield Campus' master plan includes construction of a few additional buildings on campus, but topographic and drainage constraints makes much of the land south of the campus not easily developable.

### Anticipated New Development

The biggest potential for new growth and development within the City of Reno is between I-580 and South Virginia Street, south of Mount Rose Highway. This area is part of the Redfield Regional Center zoning overlay, which allows more functional and flexible zoning. A large plot of vacant land exists south of Mount Rose Highway, with recent potential development concepts including a multi-parcel industrial park. Additionally, vacant land south of Ormat Geothermal is in discussion for a future Waste Management Transfer Station.

North of Mount Rose Highway, the potential exists for infill development within the Summit Sierra Mall site, such as an additional hotel, coffee shop, and other shops.

### *Washoe County*

For land use planning purposes, Washoe County divides the community into specific planning areas, for more focused planning and policy development. The Mount Rose corridor is located in three planning areas.

*Southeast Truckee Meadows Area Plan:* east of US 395 (Washoe County only has planning jurisdiction over areas south of the Mount Rose Study Corridor)

- The vision for this area is to respect the suburban character, provide additional open space, and ensure that infrastructure is coincident with development and appropriate in scale.
- Land uses are expected to be mostly suburban residential.

*Southwest Truckee Meadows Area Plan:* US 395 to Caswell Lane (north side of Mount Rose); US 395 to approximately Thomas Creek alignment (south side of Mount Rose)

- The overall vision for this area is to remain residential in nature (no commercial development west of Thomas Creek Parkway), provide ample open space and recreational opportunities, and maintain the scenic quality of the Mount Rose Corridor.
- This area is planned to remain mostly suburban in nature, with a mix of rural and suburban residential neighborhoods.
- Trails and bike routes are interspersed within the neighborhoods and along Mount Rose Highway, connecting communities and recreation sites.

*Forest Area Plan:* Remainder of the study area

- Much like the Southeast Truckee Meadows vision, the vision for the Forest area is prevent the spread of commercial development, provide a range of housing opportunities, and maintain the scenic quality of the Mount Rose Corridor. This area extends nearly to Lake Tahoe, and therefore includes

additional sub-planning areas. The majority of the Mount Rose study area is classified as the Galena-Callahan Suburban Character Management Area and is where most of the area's development is clustered.

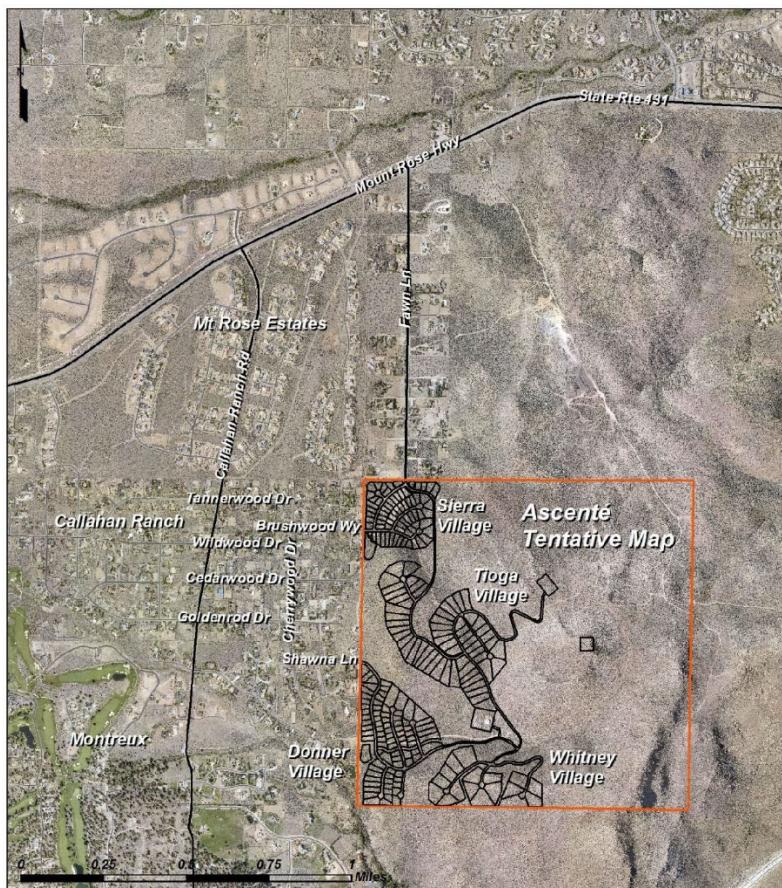

- Existing and planned trails are interspersed within the neighborhoods and along Mount Rose Highway, connecting communities and recreation sites.

### Anticipated New Development

Washoe County has previously approved a new subdivision named Ascente, located south on Fawn Lane, in the Forest area plan. This subdivision is a merge of two parcels that totals 632 acres, with development of 225 single-family homes, including approximately 35 percent of the site to remain in open space. Lots within the subdivision are a mix of low and medium density suburban residential, ranging from one-third of an acre to more than two acres in size, split into four distinct villages.

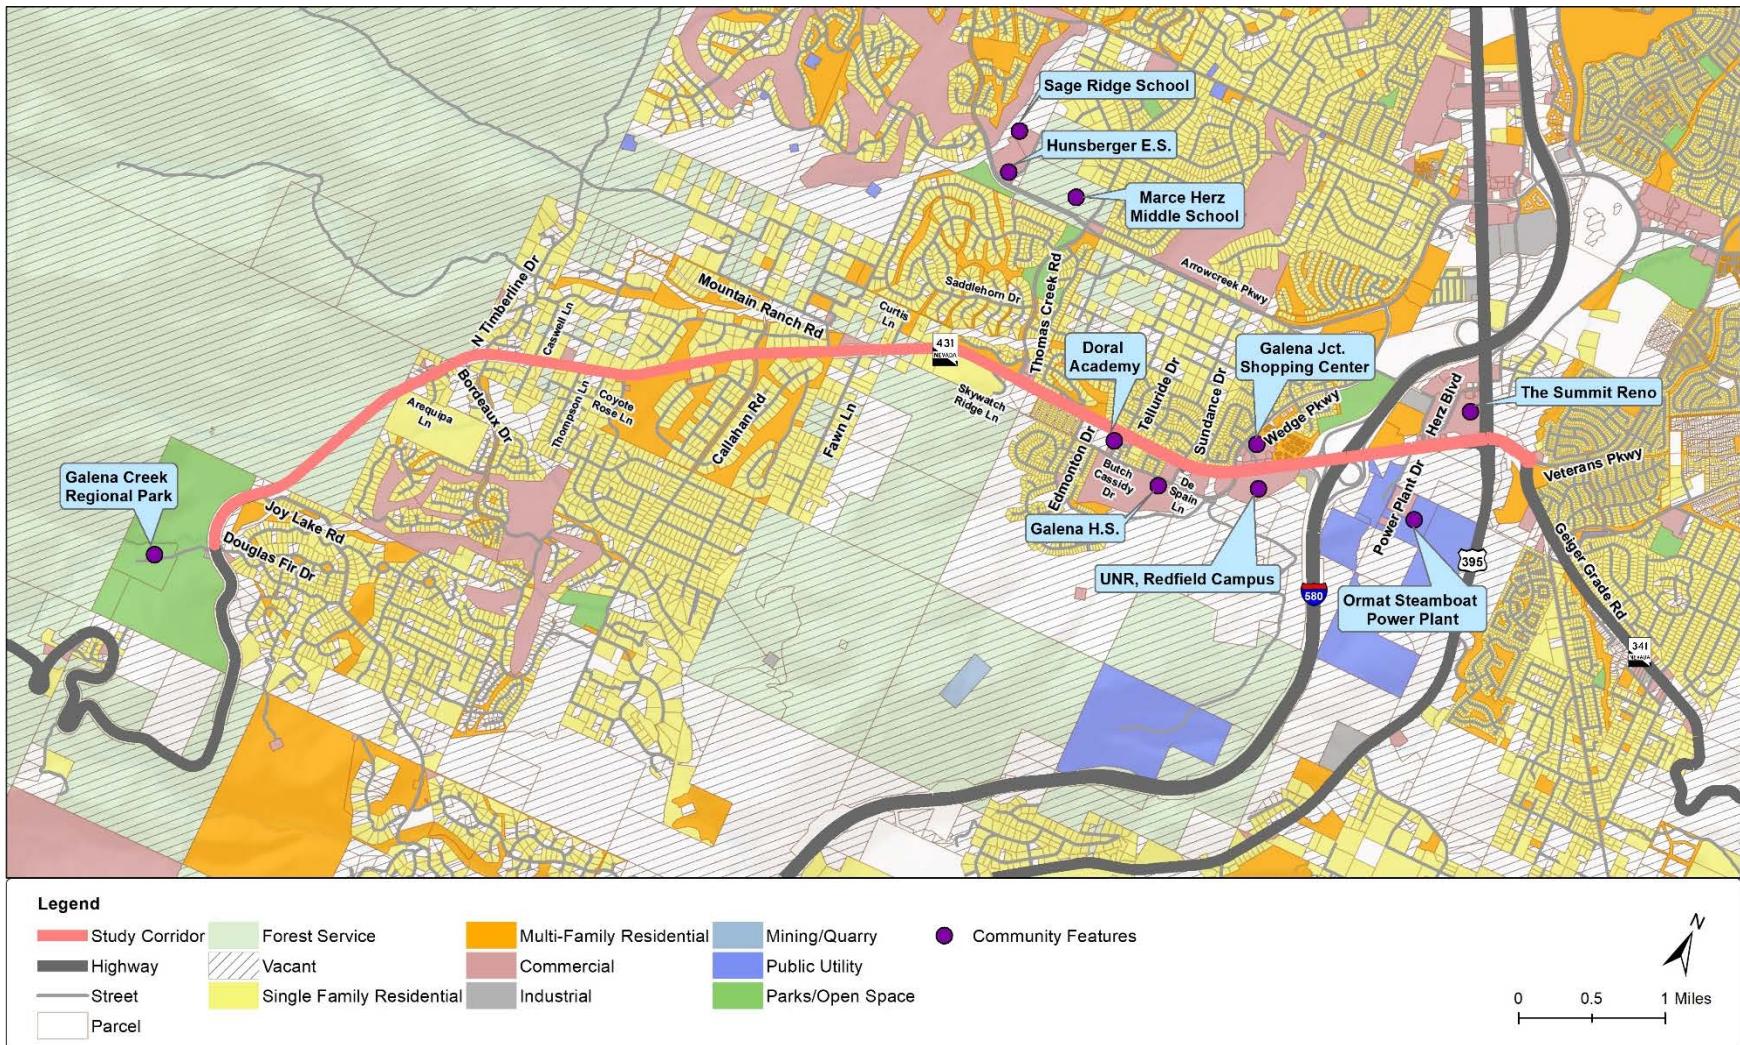

The primary access to the community would be from a new extension of Fawn Lane south, where it splits from Brushwood Way. The development is projected to generate up to 2,143 average daily trips. Fawn will provide the primary thoroughfare throughout the community, linking the four individual villages and minimizing high traffic volumes on local streets. Additional access is anticipated from Brushwood Way and Shawna Lane, which both filter into Callahan Road. *Traffic studies have indicated acceptable conditions with buildout of the 225 approved lots, however the development approval specifies that future phases – above the 225 lots – will require the construction of a second primary access point to the property to the north (currently through Forest Service land).*

# Crash Data Analysis Technical Memorandum

## Crash Data Analysis Technical Memorandum

This technical memorandum summarizes the crash data analysis for the Mount Rose Highway Corridor Study. The study is being conducted to develop a long-term vision for the Mount Rose Highway corridor, by identifying potential short-term and long-term improvements and policies in alignment with the identified vision. The study limits are along State Routes (SR) 431 and 341 (Mount Rose Highway) extending from the Geiger Grade roundabout (Veterans Parkway) on the east to Douglas Fir Drive on the west. Over the past five years the corridor has seen an increase in traffic along with two fatal crashes resulting in five deaths within the crash data timeframe of 2015-2019. In addition, a third fatal crash happened in the spring of 2020 resulting in two deaths.

The SR 431/341 corridor consists of two travel lanes in each direction from Geiger Grade to Bordeaux Drive and then reduces to one travel lane in each direction from Bordeaux Drive to Douglas Fir Drive. The corridor includes a service interchange at I-80 and has signalized intersections at:

- South Virginia Street
- Wedge Parkway
- Thomas Creek Road

**Figure 1. Mount Rose Highway Corridor Study Project Limits**

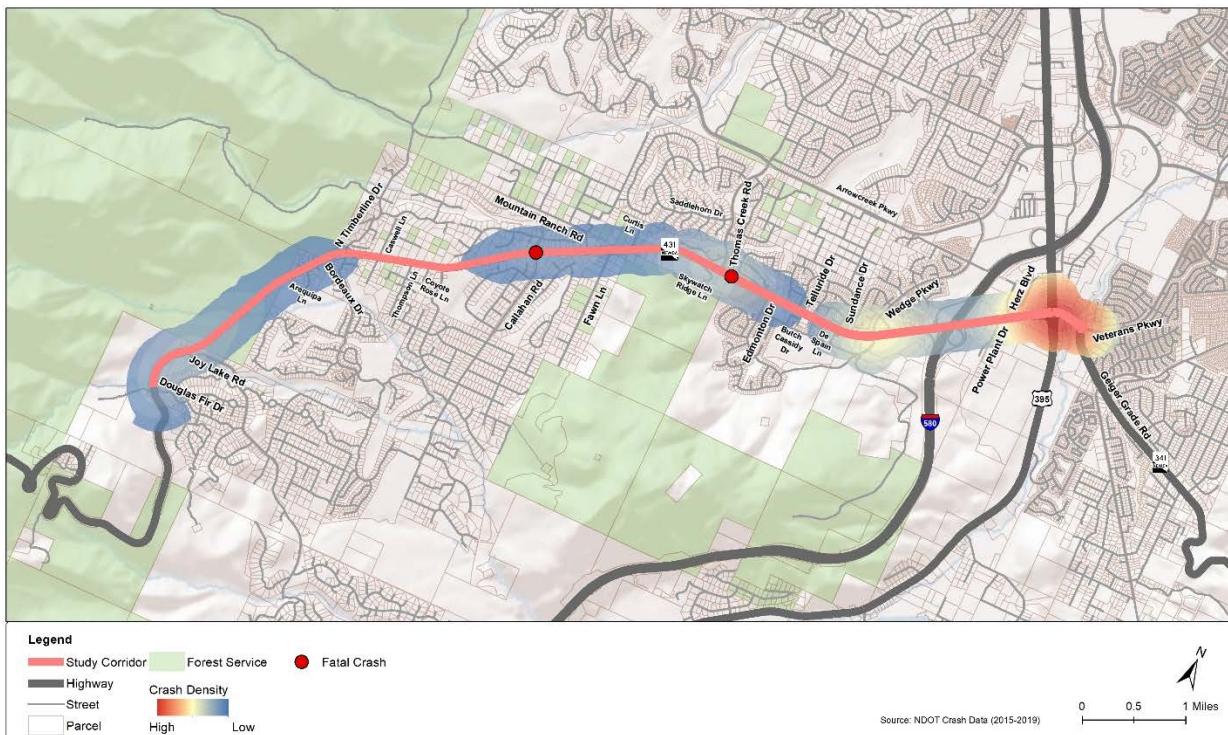

### Existing Corridor Crash Data Analysis

The crash analysis was conducted based on crash data obtained from the Nevada Department of Transportation (NDOT) for the five-year period from January 1, 2015 to December 31, 2019. The corridor crash analysis included all crashes along the corridor for the five-year period. The crash data along Mount Rose Highway (SR 341/SR 431) was evaluated and analyzed from Veterans Parkway to just west of Douglas Fir Drive, at the NDOT Maintenance Station.

Figure 2 provides a crash heat map showing frequency of crashes throughout the corridor. Crashes along the study corridor are occurring most frequently between and at the intersections of South Virginia Street and Veterans Parkway. There are also a higher number of crashes occurring around the Wedge Parkway intersection. Both South Virginia Street and Wedge Parkway are signalized intersections while the Veterans Parkway intersection is controlled by a roundabout.

**Figure 2. Mount Rose Highway Crash Heat Map**

Using the 2018 Function Classification Rates for the Minor Arterial Urban (for the evaluation year), the crash rate for Mount Rose Highway has been compared to other NDOT roadways with the same roadway classification, see **Table 1**. The crash rate was calculated with the following variables:

- R = Crash rate for the corridor expressed as crashes per one million vehicle-miles
  - C = Total number of crashes along the corridor in the study time period
  - V = Total number of vehicles using the Annual Daily Traffic AADT
  - N = Number of years of data
  - L = Length of the corridor in miles
- corridor, expressed in Average
- $$R = \frac{1,000,000 \times C}{365 \times N \times V}$$

**Table 1. Mount Rose Highway Crash Rates***Highlighted area exceeds statewide average for same Function Classification*

Crash Rate	NDOT Minor Arterial Urban (2018)	Mount Rose Hwy. - Veterans Pkwy to Douglas Fir Dr.	Mount Rose Hwy. - Segment 1 - Veterans Pkwy to Wedge Pkwy	Mount Rose Hwy. - Segment 2 - Wedge Pkwy to Thomas Creek Rd.	Mount Rose Hwy. - Segment 3 - Thomas Creek Rd. to Timberline Dr. / Bordeaux Dr.	Mount Rose Hwy. - Segment 4 - Timberline Dr. / Bordeaux Dr. to Douglas Fir Dr.
Fatal	0.0171	0.0099	0.0000	0.0227	0.0126	0.0000
Fatality	0.0180	0.0247	0.0000	0.0680	0.0252	0.0000
Injury	1.4977	0.3897	0.7172	0.8158	0.5038	1.3073
PDO	1.5340	0.8239	0.8827	1.2237	0.8312	1.8629
Total	3.0488	1.2235	1.5998	2.0622	1.3350	3.1701
Serious Injury (Subset of Injury Crashes)	0.619	0.0395	0.0276	0.0000	0.0126	0.0654

Crash rates within the study limits are typically below the statewide average in all the categories except the fatality rate. The fatality rate is above the statewide average due to the high number of fatalities in each of the fatal crashes. When dividing the corridor into working segments, the aforementioned statement holds true for the second and third segments, again due to the number of fatalities in each fatal crash. However, the second segment has a fatal crash rate that is higher than the statewide average in addition to a higher fatality rate. The fourth segment exceeds the statewide average in the following categories: property damage only, crash rate, severe injury crash rate, and the total crash rate.

In the five-year study time period (January 1, 2015 to December 31, 2019), Mount Rose Highway had a total of 248 crashes within the previously defined corridor limits. Of these crashes, there were two fatal crashes with five fatalities (one additional fatal crash occurred after the study time period, which is not included in the presented statistics), six serious injury crashes with eight serious injuries, and 73 injury crashes with 107 injuries. The predominant crash types, descending by the number of crashes, are Non-Collision crashes (112), Rear-End crashes (59), Angle crashes (37), and Sideswipe Same Direction crashes (28). **Table 2** provides the Corridor Crash Analysis and further break down of these crashes.

Table 1. Corridor Crash Analysis

Corridor Crash Analysis	
Overall Crash Data	<ul style="list-style-type: none"> <li>• 248 total crashes during 01/01/2015 through 12/31/2019 <ul style="list-style-type: none"> <li>◦ 2 fatal crashes with 5 fatalities</li> <li>◦ **1 fatal crash with 2 fatalities (occurred after 12/31/2019, not part of the 248 crashes)</li> </ul> </li> <li>• 79 injury crashes with 115 injuries <ul style="list-style-type: none"> <li>◦ 7 A injury crashes with 8 A injuries</li> </ul> </li> </ul>

Bus Crashes	<ul style="list-style-type: none"> <li>• 1 Crash involving a bus</li> </ul>
Weather Conditions	<ul style="list-style-type: none"> <li>• 137 Clear <ul style="list-style-type: none"> <li>◦ 1 fatal crash with 2 fatalities</li> </ul> </li> <li>• 66 Cloudy <ul style="list-style-type: none"> <li>◦ 1 fatal crash with 3 fatalities</li> </ul> </li> <li>• 17 Snow</li> <li>• 10 Rain</li> <li>• 8 Fog, Smog, Snow, Other</li> <li>• 5 Blowing Sand, Dirt, Snow</li> <li>• 4 Unknown</li> </ul>
Lighting Conditions	<ul style="list-style-type: none"> <li>• 150 Daylight <ul style="list-style-type: none"> <li>◦ 1 fatal crash with 2 fatalities</li> </ul> </li> <li>• 28 Dark – No Lighting <ul style="list-style-type: none"> <li>◦ 1 fatal crash with 3 fatality</li> </ul> </li> <li>• 26 Dark – Spot Lighting</li> <li>• 21 Unknown</li> <li>• 10 Dawn</li> <li>• 9 Dusk</li> <li>• 2 Dark – Unknown Lighting</li> <li>• 1 Dark – Continuous Lighting</li> </ul>
Animal Crashes	<ul style="list-style-type: none"> <li>• 26 Crashes involving Deer</li> <li>• 1 Crash involving Bear</li> <li>• 19 occurring between Thomas Creek and Timberline/Bordeaux</li> </ul>

**Conclusion**

While the Mount Rose Highway corridor does not exceed state averages for most categories of crashes, it is concerning that the corridor exceeds the statewide averages for fatalities. One factor possibly contributing to the severity of accidents is speed. In a recent speed study conducted by NDOT, 85<sup>th</sup> percentile speeds were between 60-64 miles per hour between Wedge Parkway and Douglas Fir Drive when posted speeds range from 50-55 miles per hour. The other area of concern is the number of crashes between Timberline Drive/Bordeaux Drive and Douglas Fir Drive. Potential safety concerns along here include minimal outside shoulders, speeds, and animal crossings. Finally, while not exceeding statewide averages, the intersection of Mount Rose Highway and South Virginia Street should be evaluated for opportunities to reduce accidents. Approximately two-thirds of the crashes near the intersection are rear-end accidents. Contributing factors could be roadway grade, slippery conditions, and congestion associated with the traffic signal.

# Traffic Technical Memorandum

## Traffic Technical Memorandum

### 1. TRAFFIC OPERATIONS ANALYSIS

Traffic operations analyses were performed using Synchro 11 from existing topography/mapping, field visits, and online resources such as Google Maps/Bing Maps. The various data included:

- Intersection geometry (Number of Right/Through/Left lanes, Turn Pocket Lengths)
- Peak-Hour Volumes (Veh/hr)
- Traffic Signal Timing (City of Reno)
- Roadway Segment Length
- Percent Trucks
- Speed Limit

Traffic operations analysis follows the procedure from the NDOT approved *Traffic Modeling and Operations Methodology Memorandum (December 4, 2020)* included in Appendix A. The measures of effectiveness (MOE) that were considered to evaluate the operations include HCM (6<sup>th</sup> Edition) intersection delay and level-of-service (LOS). The LOS criteria for the signalized and unsignalized intersections are shown in Tables 1 and 2, respectively. For a Two-Way Stop Controlled (TWSC) intersection, the LOS criteria applies only to minor street approach and movements. Intersection LOS as a whole is not reported for TWSC intersections. Traffic operations analysis was performed for AM and PM peak hours for the 2020 Existing Condition, 2025 No-Action, 2050 No-Action, and 2050 Build Alternatives traffic conditions.

Table 1: LOS Criteria for Signalized Intersection (HCM 6th Edition Exhibit 19-8)

Control Delay (s/veh)	LOS by Volume-to-Capacity Ratio <sup>a</sup>	
	$v/c \leq 1.0$	$v/c \geq 1.0$
$\leq 10$	A	F
$>10-20$	B	F
$>20-35$	C	F
$>35-55$	D	F
$>55-80$	E	F
$>80$	F	F

Note: For approach-based and intersectionwide assessment, LOS is defined solely by control delay

Table 2: LOS Criteria for Two-Way Stop Controlled Intersection (HCM 6th Edition Exhibit 20-2)

Control Delay (s/veh)	LOS by Volume-to-Capacity Ratio*	
	$v/c \leq 1.0$	$v/c \geq 1.0$
0-10	A	F
$>10-15$	B	F
$>15-25$	C	F

Control Delay (s/veh)	<u>LOS by Volume-to-Capacity Ratio*</u>	
	$v/c \leq 1.0$	$v/c \geq 1.0$
>25-35	D	F
>35-50	E	F
>50	F	F

Note: The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole.

The 2020 peak-hour volumes, along with the existing signal timings, were used to analyze the 2020 traffic operations. This existing geometry with 2025 and 2050 traffic volumes was used to determine future traffic operations. NDOT approved *Traffic Forecasting Memorandum* (May 24, 2021) has the traffic volumes for the years 2020, 2025, and 2050 (Appendix B). Two design alternatives, Sub-Urban Arterial and the Urban Arterial, were analyzed to evaluate the traffic operations. Various intersections control types were considered for the alternatives. The traffic analyses results are discussed in the following sections.

## 2. EXISTING CONDITIONS ANALYSIS

The existing conditions Synchro model was developed for 15 project intersections along Mt. Rose Highway. The analyses included 2020 Existing Condition, 2025 No-Action, and 2050 No-Action scenarios. There were eight TWSC intersections: one intersection where the minor movement was yield controlled, five signalized intersections, and one roundabout. The approach delay and LOS for only the stop-controlled approach (es) were reported at stopped-controlled intersections. However, for signalized intersections and roundabout, the overall intersection delay and LOS was used.

### 2.1 2020 Existing Conditions Results

Table 3 shows the 2020 Existing Condition Synchro analysis results. Six stop-controlled intersections operated with delay less than 20.7 sec/veh with LOS C/better. The southbound approach along Mt Rose Highway and Timberline Drive-Bordeaux Drive operated at capacity with delays around 38.2 sec/veh (LOS E). The southbound stop-controlled approach of Callahan Road failed with a delay of 115.7 sec/veh (LOS F). The signalized intersections operated with an acceptable delay of less than 33 sec/veh with LOS C/better.

Table 3: 2020 Existing Condition Delay (LOS)

Intersection	Control Type	AM	PM
Mt. Rose Hwy/Joy Lake Rd	2-Way Stop	10.0 (A)	15.0 (C)
Mt. Rose Hwy/Timberline Dr-Bordeaux Dr	2-Way Stop	22.4 (C)/26.8 (D)	28.4 (D)/38.2 (E)
Mt. Rose Hwy/Callahan Rd	2-Way Stop	10.8 (B)/25.9 (D)	15.2 (C)/115.7 (F)
Mt. Rose Hwy/Mountain Ranch Rd	2-Way Stop	13.1 (B)	19.1 (C)
Mt. Rose Hwy/Fawn Ln	2-Way Stop	10.2 (B)	12.5 (B)
Mt. Rose Hwy/Thomas Creek Rd	Traffic Signal	10.2 (B)	11.2 (B)
Mt. Rose Hwy/Edmonton Dr	Yield	14.5 (B)	15.0 (C)
Mt. Rose Hwy/Telluride Dr	2-Way Stop	20.7 (C)	17.9 (C)
Mt. Rose Hwy/DeSpain Ln-Sundance Dr	2-Way Stop	11.5 (B)/21.1 (C)	12.9 (B)/28.1 (D)
Mt. Rose Hwy/Wedge Pkwy	Traffic Signal	23.2 (C)	25.1 (C)

Intersection	Control Type	AM	PM
Mt. Rose Hwy/I-580 Southbound Ramps	Traffic Signal	11.3 (B)	13.4 (B)
Mt. Rose Hwy/I-580 Northbound Ramps	2-Way Stop	11.1 (B)	17.7 (C)
Mt. Rose Hwy/Herz Blvd	Traffic Signal	8.3 (A)	10.4 (B)
Mt. Rose Hwy/Virginia St	Traffic Signal	25.1 (C)	32.5 (C)
Mt. Rose Hwy/Geiger Grade-Veterans Pkwy	Roundabout	9.0 (A)	12.1 (B)

At Stop Controlled intersections, the Delay (LOS) refers to minor street approaches

Detailed results for the approach, individual movement, and LOS are included in Tables 4 (a) and 4 (b). The minor street movements at stop-controlled intersections operated with LOS D/better, except at two locations. The southbound through movement at Mt. Rose Highway and Timberline Drive-Bordeaux Drive operated at capacity (LOS E). The northbound left-turn and southbound left-turn and through movements at Mt. Rose Highway and Callahan Road operated with considerably higher delays with LOS F. All approaches at signalized intersections operated with LOS C/better, and the individual movements operated at LOS D/better.

Table 4 (b) shows the detailed 2020 Existing Condition results at the Mt. Rose Highway and Geiger Grade Road roundabout. The roundabout operated with a delay of 12 sec/veh or less with LOS B/better. All approaches and movements at the roundabout operated with LOS B/better. The detailed Synchro output for the 2020 Existing Conditions is included in Appendix C.

## 2.2 2025 No-Action Results

Table 5 shows the traffic analysis results for the 2025 No-Action. The delay and LOS at all intersections were either slightly higher or similar to that observed in the 2020 Existing Conditions. The stop-controlled southbound approach at the intersection of Mt. Rose Highway and Timberline Drive-Bordeaux Drive operated at capacity (LOS E) with a delay of 48.7 sec/veh in the PM peak analysis. At the intersection of Mt. Rose Highway and Callahan Road, the stop-controlled southbound approach failed with a delay of more than 217 sec/veh in the PM peak analysis.

The detailed results for the 2025 No-Action is shown in Table 6 (a). At the intersection of Mt. Rose Highway and Timberline Drive-Bordeaux Drive, the southbound through movement operated at capacity. At the intersection of Mt. Rose Highway and Callahan Road, all southbound movements, northbound left-turn failed with a delay greater than 112 sec/veh in the PM peak hour analysis. The delay at the TWSC intersections of Timberline Drive-Bordeaux Drive and Callahan Road along Mt. Rose Highway, increased compared to the 2020 Existing Conditions, but the LOS remained the same. All other project intersections operated with LOS D/better.

Table 6 (b) shows the detailed results at the Mt Rose Highway and Geiger Grade Road roundabout. The roundabout operated with a delay of less than 15 sec/veh with LOS B/better. All approaches and movements at the roundabout operated with LOS B/better. The detailed Synchro output is included in Appendix D.

### 2.3 2050 No-Action Results

The 2050 No-Action delay and LOS results are tabulated in Table 7. The 2050 No-Action results showed multiple stop-controlled approaches operated with LOS E/LOS F, indicating that the minor street approach operates at capacity or fails. All signalized intersections operated at LOS D/better, except one that failed during the PM peak-hour. The roundabout operated at LOS F. Traffic operations were acceptable at only six of the fifteen project intersections.

Table 7: 2050 No-Action Delay (LOS)

Intersection	Control Type	AM	PM
Mt. Rose Hwy/Joy Lake Rd	2-Way Stop	10.8 (B)	22.4 (C)
Mt. Rose Hwy/Timberline Dr-Bordeaux Dr	2-Way Stop	49.6 (E)/109.3 (F)	79.1 (F)/469.6 (F)

Mt. Rose Hwy/Geiger Grade-Veterans Pkwy	Roundabout	46.5 (E)	87.9 (F)

At 2-way stop-controlled intersections, the Delay (LOS) refers to minor street approaches

The detailed 2050 No-Action results for approach, individual movements, and LOS are shown in Tables 8 (a) and 8 (b). The delays along the minor streets are significantly higher, and most operated at capacity (LOS E) or failed (LOS F). At the TWSC intersections, the minor street operated at capacity (LOS E) or failed (LOS F) except at two locations. Table 8 (b) shows that the roundabout at Mt. Rose Highway and Geiger Grade Road failed (LOS F) during the PM peak-hour. Modifying the roundabout to a signal will have some significant costs for providing operational improvements that is not needed for another 15-20 years. As a mitigation measure to improve the operations at this roundabout and the signalized intersection at South Virginia St. and SR-341/SR-431, RTC Washoe is proposing the Toll Road Extension project. Should the RTC Washoe decide not to implement the Toll Road Extension project, converting the roundabout to a signalized intersection will need to be discussed and considered in the future. However, it is recommended that operational improvements be made to the existing roundabout in the near-term to enhance operations and safety. The detailed Synchro output for 2050 No-Action is included in Appendix E.

Table 8 (a): 2050 No-Action Detail Results (Delay &amp; LOS)

### 3. 2025 NEAR-TERM ANALYSIS

The 2025 Near-Term alternative considered minor improvements to three of the project intersections as listed in Table 9. The intersection of Mt. Rose Highway and Callahan Road was considered as a Roundabout, and a traffic signal at Mt. Rose Highway and I-580 Northbound Ramps.

Table 9: 2025 Near-Term Concept Intersection Improvements

Intersection	Improvements
Mt. Rose Hwy/Callahan Rd	Roundabout
Mt. Rose Hwy/Edmonton Dr	Unsignalized High-T with northbound left-turn access
Mt. Rose Hwy/I-580 Northbound Ramps	Signalized Traffic Control

The results of the traffic analysis are shown in Table 10 for the three intersections. The signalized intersection operated with an overall LOS B/better, and the roundabout operated with LOS A. The northbound approach at the unsignalized High-T intersection of Mt. Rose Highway and Edmonton Drive operated at LOS D/better.

Table 10: 2025 Near-Term Concept Delay (LOS)

Intersection	Control Type	AM	PM
Mt. Rose Hwy/Callahan Rd	Roundabout	4.8 (A)	7.4 (A)
Mt. Rose Hwy/Edmonton Dr	Unsig. High-T	17.5 (C)	25.8 (D)
Mt. Rose Hwy/I-580 Northbound Ramps	Traffic Signal	9.0 (A)	19.1 (B)

Unsig. refer to unsignalized intersection

The detailed 2025 Near-Term alternative results for approach, individual movements, and LOS are shown in Table 11. All approaches/movements operated with LOS D/better, except the northbound approach/movements at the intersection of Mt. Rose Highway and I-580 Northbound Ramps. The detailed Synchro output for the 2025 Near-Term alternative is included in Appendix F.

Table 11: 2025 Near-Term Alternative Detail Results (Delay &amp; LOS)

\* Signalized Intersection

#### 4. 2050 ALTERNATIVE RESULTS

The two design alternatives that were analyzed for the year 2050 were the Sub-Urban and Urban concepts. The intersection control type for each build alternative is listed in Table 12. At signalized intersections, the traffic signal timing splits and offsets were optimized for better coordination along the Mt. Rose Highway corridor. The cycle lengths were maintained at all signalized intersections to provide coordination along the entire corridor. The traffic analysis results for Build Alternatives are discussed in detail in the following sections. As mentioned in Section 1, the intersection delay corresponds to signalized and roundabout, but for a TWSC intersection, the delay and LOS is reported for minor street.

Table 12: Intersection Control Type Comparison

Intersection	Existing Control	Urban Concept	Sub-Urban Concept
Mt. Rose Hwy/Joy Lake Rd	2-Way Stop	2-Way Stop	2-Way Stop
Mt. Rose Hwy/Timberline Dr-Bordeaux Dr	2-Way Stop	EBR, EBL, WBL, WBR, NBR	Roundabout

"Stop" refers to minor street approach

#### 2.4 2050 Urban Concept Analysis Results

Table 13 shows the delay and LOS for the 2050 Urban concept. The Urban concept included three stop-controlled intersections. The minor street approaches at Mt. Rose Highway and Timberline Drive-Bordeaux Drive intersection failed (LOS F). This concept also included four unsignalized High-T intersections. The intersection of Mt. Rose Highway at Edmonton Drive and Telluride Drive operated at capacity with delays over 35.3 sec/veh (LOS E). The signalized intersection at Mt. Rose Highway and Virginia Street, and the roundabout at Mt. Rose Highway and Geiger Grade-Veterans Parkway, had no design changes; hence, the results were similar to the 2050 No-Action analysis. All other signalized intersections operated with delays less than 45 sec/veh (LOS D).

Detailed delay and LOS results for approach and movements for the 2050 Urban concept are shown in Tables 14 (a) and 14 (b). At the intersection of Mt. Rose Highway and Callahan Road, the eastbound left-turn failed with LOS F. The southbound and westbound left-turn operated at capacity (LOS E) with delays close to 56 sec/veh and 79 sec/veh, respectively. In addition, the northbound left-turn at Edmonton Drive and

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

southbound left-turn at Telluride Drive operated with LOS F. The detailed Synchro output for the 2050 Urban concept is included in Appendix G.

## 2.5 2050 Suburban Concept Analysis Results

The traffic analysis results for the 2050 Suburban concept are shown in Table 15. All of the stop-controlled intersections minor street operated with a delay of less than 22.4 sec/veh (LOS C/better), except at the Mt. Rose Highway and Telluride Drive intersection. The High-T intersection of Mt. Rose Highway and Telluride Drive did not improve the traffic operations, and operated with a delay higher than 35 sec/veh (LOS E). The stop-controlled intersections that were converted to roundabout in 2050 that showed reduced delay with improved LOS. The roundabouts operated with a delay of less than 17 sec/veh (LOS C/better). All signalized intersections operated with an overall delay of less than 45 sec/veh (LOS D/better). The signalized intersection at Mt. Rose Highway and Virginia Street, and the roundabout at Mt. Rose Highway and Geiger Grade-Veterans Parkway, had no design changes; hence, the results were similar to the 2050 No-Action analysis.

Table 15: 2050 Suburban Delay (LOS)

Intersection	Control Type	AM	PM
Mt. Rose Hwy/Joy Lake Rd	2-Way Stop	10.7 (B)	20.0 (C)
Mt. Rose Hwy/Timberline Dr-Bordeaux Dr	Roundabout	5.7 (A)	14.2 (B)
Mt. Rose Hwy/Callahan Rd	Roundabout	6.2 (A)	13.9 (B)
Mt. Rose Hwy/Mountain Ranch Rd	Unsig. High-T	17.5 (C)	22.4 (C)
Mt. Rose Hwy/Fawn Ln	Roundabout	5.9 (A)	9.6 (A)
Mt. Rose Hwy/Thomas Creek Rd	Roundabout	8.1 (A)	16.9 (C)
Mt. Rose Hwy/Edmonton Dr	Roundabout	12.4 (B)	16.7 (C)
Mt. Rose Hwy/Telluride Dr	Unsig. High-T	45.8 (E)	35.3 (E)
Mt. Rose Hwy/DeSpain Ln-Sundance Dr	2-Way Stop	14.5 (B)/14.4 (B)	18.2 (C)/16.5 (C)
Mt. Rose Hwy/Wedge Pkwy	Traffic Signal	26.5 (C)	29.4 (C)
Mt. Rose Hwy/I-580 Southbound Ramps	Traffic Signal	20.1 (C)	21.9 (C)
Mt. Rose Hwy/I-580 Northbound Ramps	Traffic Signal	42.6 (D)	44.4 (D)
Mt. Rose Hwy/Herz Blvd	Traffic Signal	9.2 (A)	13.7 (B)
Mt. Rose Hwy/Virginia St	Traffic Signal	30.9 (C)	88.5 (F)
Mt. Rose Hwy/Geiger Grade-Veterans Pkwy	Roundabout	49.1 (E)	56.7 (F)

Unsig. refer to unsignalized intersections

Detailed delay and LOS for approach/movements are shown in Tables 16 (a) and 16 (b). All approaches and movements at the stop-controlled intersections operated with LOS C/better. The southbound left-turn at Mt. Rose Highway and Telluride Drive failed during the AM and operated at capacity during PM peak hour. All roundabouts operated with LOS D/better. Mt. Rose Highway and Geiger Grade-Veterans Parkway roundabout results were similar to the 2050 No-Action analysis. At all signalized intersections, the movements operated with LOS D/better. The corresponding approaches operated in LOS D/better during AM and PM peak-hour. The only exception was at the intersection of Mt. Rose Highway and I-580 Southbound Ramps, where the westbound left-turn operated with a delay of 55.9 sec/veh (LOS E). As there was no design change at Mt. Rose Highway and Virginia Street, the operations were similar to the 2050 No-Action. The detailed Synchro output is included in Appendix H.

Table 16 (a): 2050 Sub-Urban Concept Detail Results (Delay &amp; LOS)

Intersection	AM Peak-Hour												PM Peak-Hour														
	Eastbound			Westbound			Northbound			Southbound			Eastbound			Westbound			Northbound			Southbound

## 5. OVERALL COMPARISON OF ALTERNATIVES

In addition to the delay and LOS, vehicle miles traveled (VMT), vehicle hours traveled (VHT), and total delay were reported from Synchro. The VMT for all scenarios are presented in Table 17 and a comparison chart is shown in Figure 1. As expected, the VMT increased in the 2050 No-Action compared to the 2020 Existing Conditions due to increase in traffic volumes. The Urban and Sub-Urban alternatives did not show much change in the VMTs compared to No-Action.

Table 17: Vehicle Miles Traveled (VMT) in miles

Scenario	AM Peak-Hour	PM Peak-Hour
2020 Existing Conditions	8,719	11,704
2050 No-Action	13,643	18,316
2050 Urban	13,632	18,327
2050 Sub-Urban	13,676	18,340

Figure 1: Comparison of Vehicle Miles Traveled (VMT)

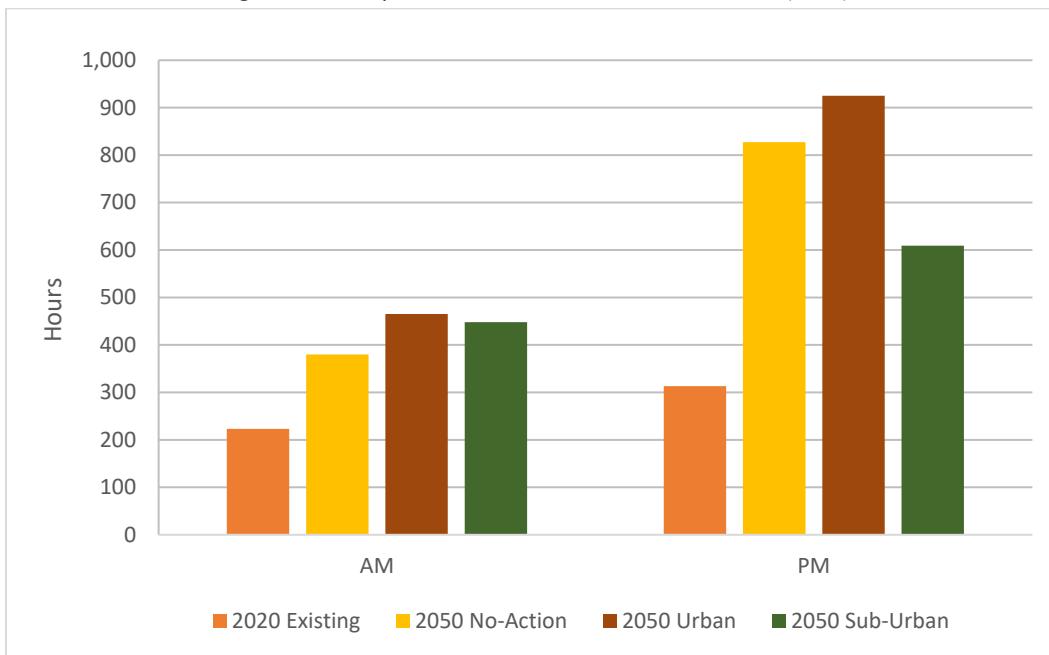

The VHT is tabulated in Table 18, and a comparison chart is provided in Figure 2. The 2050 No-Action is significantly higher than the 2020 Existing Condition due to increased traffic volume. The Build Alternatives showed increased VHT during AM, but in the PM only the Urban alternative showed higher VHT. The 2050 Sub-Urban alternative showed reduced VHT compared to 2050 No-Action.

Table 18: Vehicle Hours Traveled (VHT) in hours

Scenario	AM Peak-Hour	PM Peak-Hour
2020 Existing Conditions	223	313
2050 No-Action	380	827
2050 Urban	465	925
2050 Sub-Urban	448	609

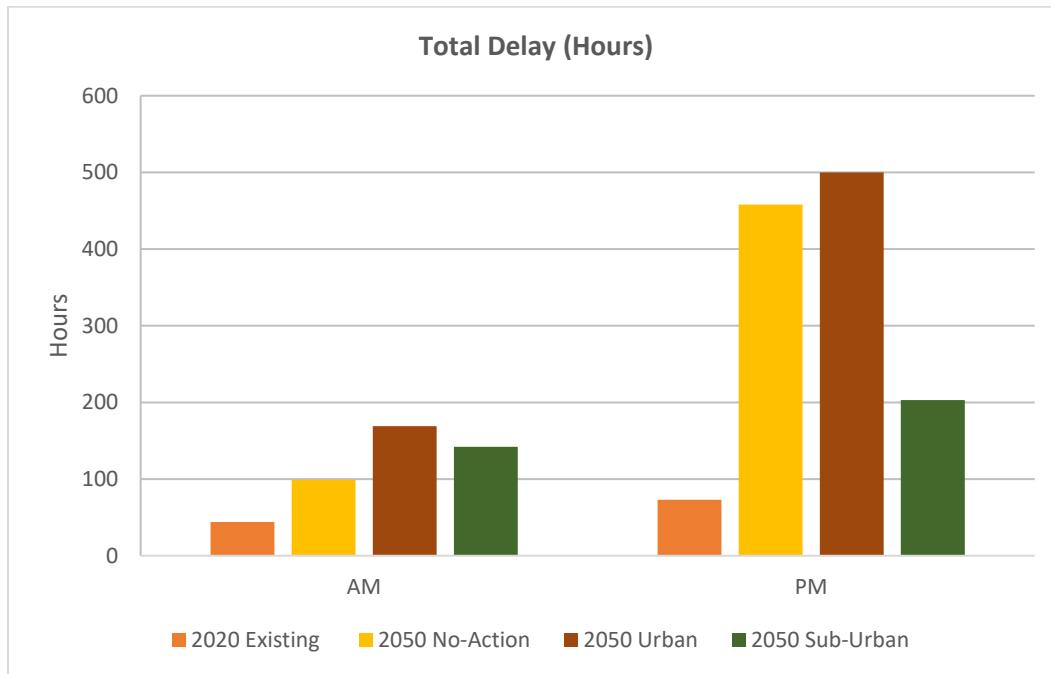

Figure 2: Comparison of Vehicle Hours Traveled (VHT)

The total delay for all scenarios is shown in Table 19 and Figure 3. The total delay in the 2050 No-Action was extremely high compared to the 2020 Existing Conditions. The Build Alternatives had increased total delay within the network. The increase in delay in the 2050 Urban alternative is due to the proposed two new traffic signals (stop-controlled in 2020 Existing Conditions). In the 2050 Sub-Urban alternative, the total delay increased during AM, but reduced during PM because of the proposed roundabouts at five intersections.

Table 19: Total Delay (Hours)

Scenario	AM Peak-Hour	PM Peak-Hour
2020 Existing Conditions	44	73
2050 No-Action	99	458
2050 Urban	169	500
2050 Sub-Urban	142	203

**Figure 3: Comparison of Total Delay**

## 6. SUMMARY AND CONCLUSION

Traffic analysis indicated that all project intersections have higher delays in 2050 No-Action compared to 2020 Existing Conditions, due to the increase in traffic volumes. The network wide MOEs also showed higher VMT, VHT, and total delay for 2050 No-Action. The 2050 Urban alternative considered signalizing two stop-controlled intersections that are adding to the total network delay. The additional delay for stopping the vehicles along the major approaches increases the overall network delay, but it provides time for traffic along minor streets to safely enter the network. The 2050 Sub-Urban alternative considered changing four TWSC intersections and one signalized intersection to roundabouts and signalizing one of the existing TWSC intersections, which resulted in reduced network delay. The roundabouts help traffic move smoothly and allows for a consistent speed reduction/management opportunity while decreasing the overall network delay.

### 1. INTRODUCTION AND BACKGROUND

The Nevada Department of Transportation (NDOT) desires to perform a corridor study of the Mount Rose Highway (State Route 431/SR 431). The study will develop a Mount Rose Corridor Action Plan, providing decision makers with a guide that will define future transportation needs along SR 431. The Mount Rose Corridor Action Plan will provide the corridor vision. The study will be assessed for socioeconomic, community, land use, multi-modal, environmental, and monetary impacts of implementing a range of needed projects addressing existing and projected transportation problems.

Mount Rose Highway is a scenic byway officially named “Highway to the Sky”. It connects Lake Tahoe to the City of Reno, starting at the junction of State Route 28 and stretching 24 miles northeast to the S. Virginia Street intersection. From the foothills approaching Reno, the two-lane highway increases to four-lane highway with a center two-way left-turn lane. The functional classification of Mount Rose Highway transitions from a “Rural Minor Arterial” to an “Urban Principle Arterial-Other”. West of I-580 interchange, Mount Rose Highway connects to South Virginia Street and the Veterans Parkway roundabout via Geiger Grade Road (SR 341).

This *memorandum* documents the methodology and assumptions for traffic modeling and operations analysis. A review and approval by NDOT is requested before beginning the macro-level traffic modeling and operation analysis. A completed “Methodology Memorandum Content Checklist” is included at the end of this *memorandum*.

### 2. GEOGRAPHIC LIMITS OF TRAFFIC ANALYSIS

Mount Rose Highway from Joy Lake Road to Geiger Grade Road roundabout located in Washoe County, Reno, Nevada. Figure 1 shows the geographical project limits for the traffic modeling and operation analysis. The project limits include:

- Mount Rose Highway: Douglas Fir Drive to Geiger Grade Road
- Interchanges: I-580 and Mount Rose Highway
- Intersections:
  1. Mount Rose Highway & Joy Lake Road
  2. Mount Rose Highway & Timberline Drive/Bordeaux Drive
  3. Mount Rose Highway & Callahan Road
  4. Mount Rose Highway & Mountain Ranch Road
  5. Mount Rose Highway & Fawn Lane

6. Mount Rose Highway & Thomas Creek Road
7. Mount Rose Highway & Edmonton Drive
8. Mount Rose Highway & Telluride Drive
9. Mount Rose Highway & Sundance Drive/De Spain Lane
10. Mount Rose Highway & Wedge Parkway
11. Mount Rose Highway & I-580 Southbound Ramps
12. Mount Rose Highway & I-580 Northbound Ramps
13. Mount Rose Highway & Herz Boulevard
14. Mount Rose Highway & Virginia Street
15. Mount Rose Highway/Geiger Grade Road/Veterans Parkway & Whites Creek Lane/Geiger Grade Road

**Figure 1: Project Limits for Traffic Operations Analysis**

### 3. TECHNICAL GUIDANCE, STANDARDS AND TOOLS

Synchro 11 will be used for traffic modeling and operations analysis. The following technical references will be used:

- CORSIM Modeling Guidelines, NDOT, 2012
- Highway Capacity Manual 6<sup>th</sup> Edition, Transportation Research Board, 2016
- Traffic Analysis Toolbox Volume III: Guidelines for Applying Traffic Microsimulation Modeling Software, FHWA, 2004

### 4. TRAFFIC VOLUMES AND MODELING PERIOD

The 2020 AM and PM peak period (7:00 to 9:00 AM; 4:00 to 6:00 PM) traffic counts were collected during the week of November 16, 2020. The traffic counts will be reviewed and adjusted with a COVID correction factor as needed. The 2020 traffic volumes will be reviewed and approved by the NDOT Traffic Information before using them for the traffic analysis. The percent of heavy vehicles/trucks will be obtained from NDOT Traffic Information. The traffic modeling and operations analysis will be performed for AM and PM peak-hours, as well as the results will be reported respectively, for all scenarios. Existing traffic signal timing information will be obtained from City of Reno for the project intersections.

The 2020 traffic volumes, 2050 forecasted volumes and the truck percentage will be included in the Traffic Forecasting Memorandum.

## 5. ANALYSIS SCENARIOS

Traffic modeling and operations analysis will be completed for the following scenarios:

- Existing Year 2020
- Interim Year 2025 No-Action
- Interim Year 2025 Build Alternatives
- Design Year 2050 No-Action
- Design Year 2050 Build Alternatives

Traffic modeling and operations analysis will be performed for up to two (2) overall corridor scenarios, and up to two (2) various intersection configurations at; Callahan Road, Thomas Creek Road, I-580 ramp termini and Geiger Grade Road.

**Methodology Memorandum Content Checklist**

Item	Description	Check
Project Description and Background	Brief information about the project (purpose, general study area, etc.)	✓
Technical Guidance and Standards	Standard Manuals along with their version (HCM, MUTCD, NDOT Standards, etc.)	✓
Traffic Analysis Tools	Softwares to be used along with their version (Synchro, HCS etc.)	✓
Analysis Years	Base (2020), Interim (2025) and Design/Horizon (2050)	✓
Analysis Scenarios	Existing, No-Build, Build alternatives	✓
Analysis Periods	AM and PM peak-hour	✓
Existing Conditions	Description of existing conditions and/or how existing analysis will be performed	✓
Data Sources	List of sources of data and relevant information	✓
Traffic Operations Analysis, Calculations and/or Assumptions	Signal timing/phasing, peak-hour factors, etc.	✓
Heavy Vehicles/Truck Percentages	Truck percentage used for existing and future scenarios	✓
Storage Length Calculation Method	How the turn bay lengths will be calculated	✓
Level of Service (LOS) Threshold	LOS standard for each facility type. For intersections, document by movement, by approach, by overall intersection. Source or basis of the selected LOS standard	✓
Coding and Analysis Assumptions	Documentation of support tools (if used) for intersection timing/optimization (such as Synchro)	✓
Additional item(s)	Any unique item(s) that is appropriate to be discussed or approved by NDOT	✓

### 1. INTRODUCTION AND BACKGROUND

The Nevada Department of Transportation (NDOT) desires to perform a corridor study of the Mount Rose Highway (State Route 431/SR 431). The study will develop a Mount Rose Corridor Action Plan, providing decision makers with a guide that will define future transportation needs along SR 431. The Mount Rose Corridor Action Plan will provide the corridor vision. The study will be assessed for socioeconomic, community, land use, multi-modal, environmental, and monetary impacts of implementing a range of needed projects addressing existing and projected transportation problems.

Mount Rose Highway is a scenic byway officially named “Highway to the Sky”. It connects Lake Tahoe to the City of Reno, starting at the junction of State Route 28 and stretching 24 miles northeast to the S. Virginia Street intersection. From the foothills approaching Reno, the two-lane highway increases to four-lane highway with a center two-way left-turn lane. The functional classification of Mount Rose Highway transitions from a “Rural Minor Arterial” to an “Urban Principle Arterial-Other”. West of I-580 interchange, Mount Rose Highway connects to South Virginia Street and the Veterans Parkway roundabout via Geiger Grade Road (SR 341).

This *memorandum* explains the procedure used for the traffic forecasts. The NDOT approved *Traffic Forecasting Methodology Memorandum* has additional details on the methodology and assumptions. A review and approval by NDOT is requested before beginning the traffic forecasts.

### 2. PROJECT LIMITS

Mount Rose Highway from Joy Lake Road to Geiger Grade Road roundabout located in Washoe County, Reno, Nevada. Figure 1 shows the project limits and includes:

- Mount Rose Highway: Douglas Fir Drive to Geiger Grade Road
- Interchanges: I-580 and Mount Rose Highway
- Intersections:
  1. Mount Rose Highway & Joy Lake Road
  2. Mount Rose Highway & Timberline Drive/Bordeaux Drive
  3. Mount Rose Highway & Callahan Road
  4. Mount Rose Highway & Mountain Ranch Road
  5. Mount Rose Highway & Fawn Lane
  6. Mount Rose Highway & Thomas Creek Road
  7. Mount Rose Highway & Edmonton Drive

8. Mount Rose Highway & Telluride Drive
9. Mount Rose Highway & Sundance Drive/De Spain Lane
10. Mount Rose Highway & Wedge Parkway
11. Mount Rose Highway & I-580 Southbound Ramps
12. Mount Rose Highway & I-580 Northbound Ramps
13. Mount Rose Highway & Herz Boulevard
14. Mount Rose Highway & Virginia Street
15. Mount Rose Highway/Geiger Grade Road/Veterans Parkway & Whites Creek Lane/Geiger Grade Road

**Figure 1: Project Limits for Traffic Forecasting**

### 3. FORECAST SCENARIOS

2020 AM and PM existing traffic counts was collected in November 2020 and adjusted with a COVID correction factor. The percentage of heavy vehicle/truck was calculated from NDOT data and approved by the NDOT Traffic Information. Traffic forecast for AM and PM peak-hour was developed for the following scenarios:

- Existing Year 2020
- Interim Year 2025
- Design Year 2050

The 2020 traffic volumes, 2025 and 2050 forecasted volumes, and the heavy vehicle/truck percentage are included in this Traffic Forecasting Memorandum.

### 4. COVID CORRECTION FACTOR

The 2020 field counts collected by Silver State Traffic (SST) during the week of November 16, 2020 was reviewed (AM and PM peak period). The 2019 traffic volumes from NDOT TRINA were reviewed at all available NDOT counters within the project limits during the same AM and PM peak periods. The 2020 field counts were compared with the 2019 traffic volumes on the same segment locations. The COVID correction factor was calculated by taking the ratios of the 2019 hourly traffic volumes to the 2020 field counts. Below are the steps for various conditions;

1. If the ratio of 2019/2020 is less than or close to 1.00, the 2020 field counts will be considered as 2019 traffic data and will be applied with an approved growth rate to bring the traffic volumes to the year 2020

2. If the ratio of 2019/2020 is greater than 1.00, the ratio will be applied to increase the 2020 field counts to match closer to the 2019 traffic volumes. An approved growth rate will be applied to bring the traffic volumes to the year 2020

Table 1 shows the COVID correction factors calculated for all the NDOT counter locations. Table 2 shows the correction factors applied to the intersection volumes from the specific NDOT counter.

**Table 1: COVID Correction Factor**

## 5. TRAFFIC FORECASTING METHODOLOGY

All traffic forecasts were developed using the methodology and guidance provided in the *NDOT Traffic Forecasting Guidelines* (2012). NDOT TRINA historical traffic data along the corridor was reviewed to determine the annual growth rate. In addition, RTC Washoe travel-demand model (TransCAD) data was reviewed and used to develop the traffic forecasts.

Table 3 shows the historical AADT of all the available NDOT TRINA counters within the project limits. There were six counters on Mount Rose Highway, five ramps at I-580 interchange and two counters on cross streets that were reviewed. In the past 10 years (2020 to 2019), there was some noticeable growth on Mount Rose Highway traffic, some of the I-580 ramps, and minimum growth on cross street traffic. As two of the I-580 ramps had traffic data only for past 5 years, the growth rates for those two ramps were calculated for respective years. Overall, an annual growth rate of 1.3% was determined from the historical AADT data.

**Table 3: NDOT TRINA AADT Data**

Mt. Rose Highway					
Counter	Location	2010	2015	2019	Annual Growth Rate
310368	750 ft E of Joy Lake Rd	7,300	6,500	9,000	2.1%
317120	0.3 miles W of Callahan	10,500	10,800	11,500	0.9%
310930	0.2 miles E of Callahan	13,000	12,500	15,300	1.6%
311091	460 ft W of Sundance	16,000	16,000	22,700	3.6%
310019	370 ft W of SB off-ramp	17,000	20,900	21,800	2.5%
310136	0.2 miles W of US395A	7,500	7,100	10,200	3.1%
I-580/Mt. Rose Hwy Interchange					
310025	NB on-ramp (loop ramp)	7,300	7,900	8,900	2.0%

311003	Wedge Pkwy	5,500	5,300	5,750	0.4%
Annual Overall Growth Rate					
1.3%					

ATR

As mentioned, the RTC Washoe TransCAD data was reviewed for the years 2020 and 2050 to determine the growth rate. Table 4 shows the ADT for each segments on Mount Rose Highway, and I-580 interchange ramps. The growth rates are also include in Table 4. Overall, an annual growth rate of 1.5% was determined from the TransCAD data.

**Table 4: RTC Washoe TransCAD ADT Data**

From	To	2020	2050	Overall Growth	Annual Growth
West End	Mt. Rose Hwy/Joy Lake Rd	6,629	13,102	98%	2.3%
Mt. Rose Hwy/Joy Lake Rd	Mt. Rose Hwy/Timberline Dr-Bordeaux Dr	10,710	20,096	88%	2.1%

Mt. Rose Hwy/Herz Blvd	Mt. Rose Hwy/Virginia St	12,231	15,504	27%	0.8%
Mt. Rose Hwy/Virginia St	Mt. Rose Hwy/Geiger Grade-Veterans Pkwy	20,649	25,380	23%	0.7%
Mt. Rose Hwy/Geiger Grade-Veterans Pkwy	East End	20,649	25,793	25%	0.7%
<b>I-580/Mt. Rose Hwy Ramp Volumes</b>					
NB on-ramp (loop ramp)		10,282	13,750	34%	1.0%
NB on-ramp		458	1,779	288%	4.6%
NB off-ramp		1,705	3,153	85%	2.1%
SB on-ramp		1,180	1,445	22%	0.7%
SB off-ramp		9,076	12,702	40%	1.1%
<b>Annual Overall Growth Rate</b>					
1.5%					

Based on the above traffic data analysis from NDOT historical data and RTC TransCAD, and coordinating with NDOT Traffic Information and NDOT Traffic Operations, an annual growth rate of 1.5% was recommended to forecast the future traffic volumes.

## 6. TRAFFIC VOLUMES AND FORECASTS

The 2020 traffic volumes after applying the COVID correction factor and growth rate are shown in Figure 2. Traffic forecast for 2025 and 2050 peak-hour (AM & PM) are shown in Figure 3 and 4, respectively.

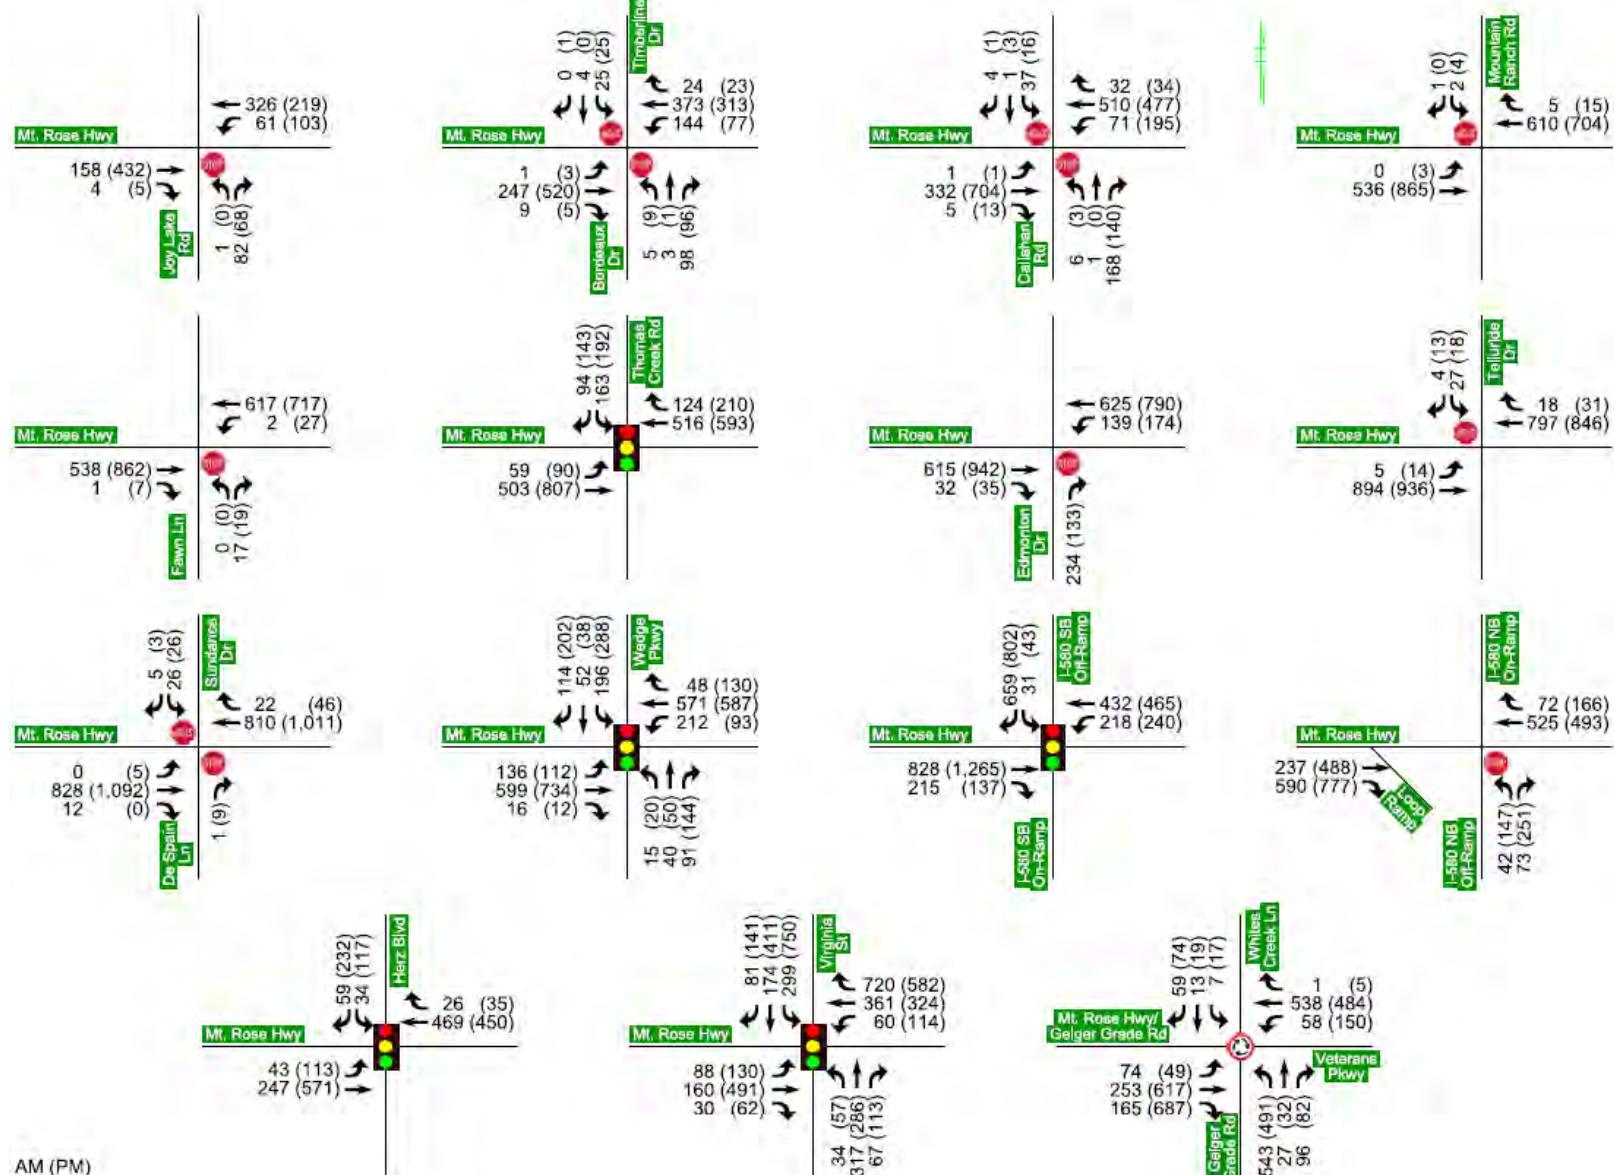

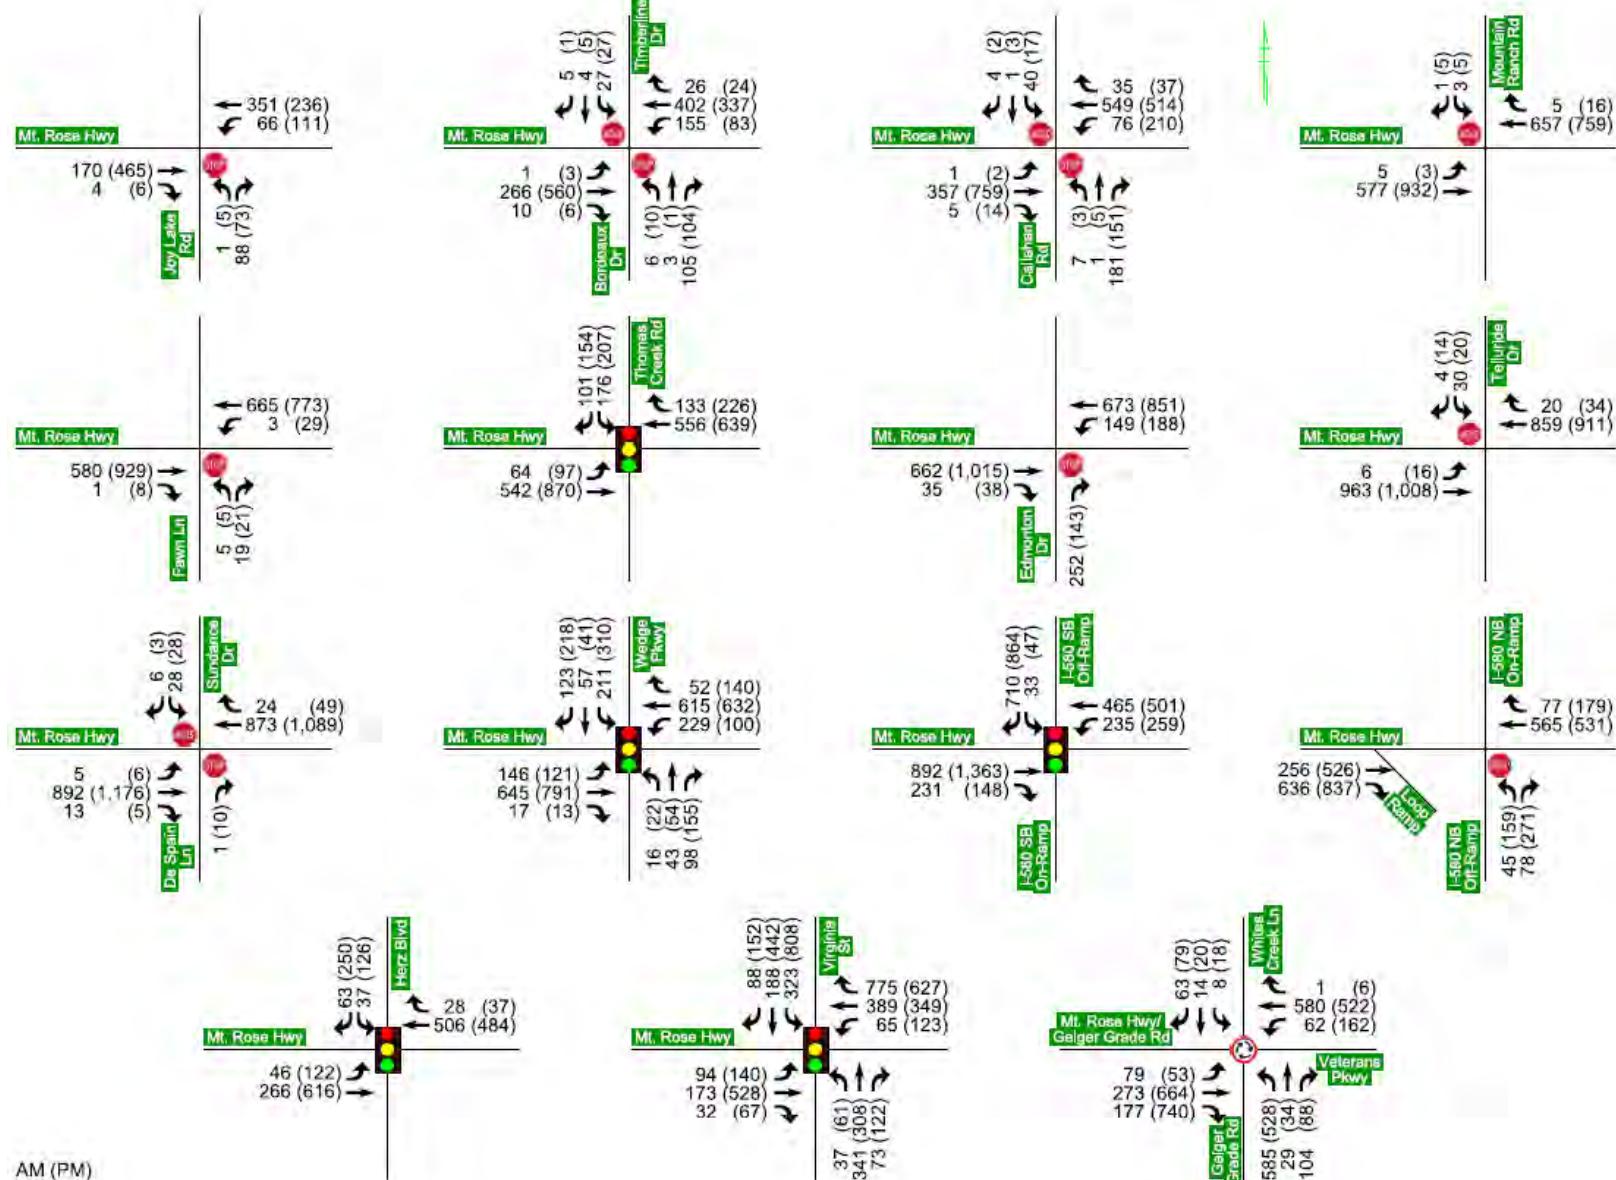

Figure 2: 2020 Peak-Hour Traffic Volumes

**Figure 3: 2025 Peak-Hour Traffic Volumes**

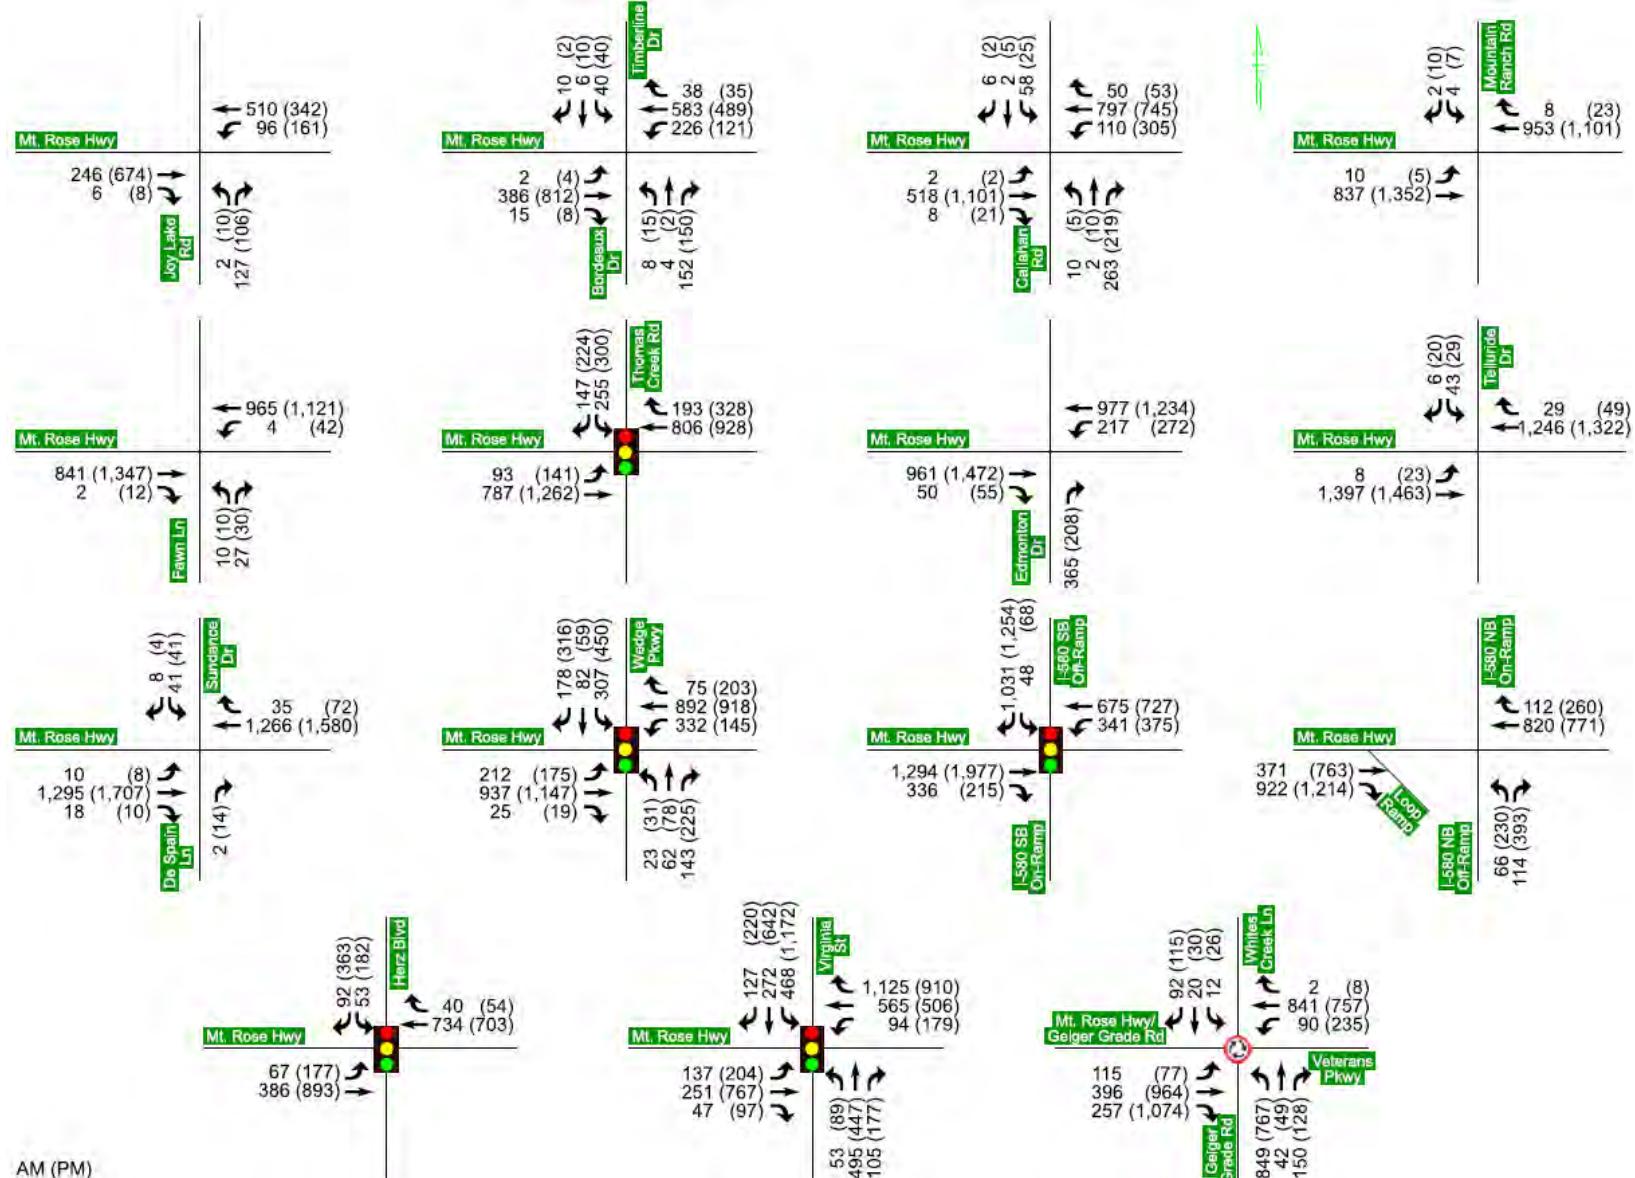

Figure 4: 2050 Peak-Hour Traffic Volumes

## 7. HEAVY VEHICLE/TRUCK PERCENTAGE

The 2020 field traffic counts had the vehicle classification information. The heavy vehicle/truck percentage at each intersection are shown in Table 6 for both AM and PM peak-hour. The corridor average percentage of heavy vehicle/truck from the 2020 field counts was 2.9% (AM) and 1.3% (PM). In addition, the 2019 NDOT Vehicle Classification Distribution Report was also reviewed to identify the heavy vehicle/truck percentage at/near the close proximity of the project limits. The 2017 was the latest year that the traffic data was available. The average percentage of heavy vehicle/truck from the 2017 NDOT was found to be 1.2%.

Based on the coordination with NDOT Traffic Information, a heavy vehicle/truck percentage of 3.0% was recommended as a conservative approach to be used in the traffic analysis.

**Table 5: Heavy Vehicle/Truck Percentage**

Intersection	2020 Field Counts		2017 NDOT TRINA
	AM	PM	
Mt Rose Hwy/Joy Lake Rd	4.0%	1.9%	
Mt Rose Hwy/Timberline Dr-Bourdeaux Dr	3.4%	1.4%	
Mt Rose Hwy/Callahan Rd	3.4%	1.3%

Mt Rose Hwy (SR 28 and Mt. Rose Ski Resort)	-	-	1.2%
<b>Corridor Average</b>	<b>2.9%</b>	<b>1.3%</b>	<b>1.2%</b>

## 8. CONCLUSION

This memorandum summarizes the steps used for forecast, assumptions, 2020 traffic volumes, and the traffic forecast for the years 2025 and 2050. This memorandum also documents the Heavy Vehicle/Truck percentages. NDOT Traffic Information review and approval of this traffic forecasting memorandum is requested.

# Stakeholder and Public Engagement Summary

## Stakeholder and Public Engagement Summary

A key component of the Mt. Rose Corridor Plan was to ensure involvement from local agencies and the general public throughout the study. The study team utilized a variety of groups and meetings to provide updates, and more importantly solicit feedback on study needs, assumptions, and recommendations. A Technical Advisory Committee (TAC) and Stakeholder Working Group (SWG) were developed to involve local, state, and federal agencies. The TAC was comprised of NDOT technical experts within their various Departments. The SWG consisted of senior leadership from NDOT and other stakeholder agency leadership and representatives. The SWG involved Division Chiefs or Assistant Chiefs from NDOT and Department or Division Directors from stakeholder agencies.

### TAC Meetings

Three TAC meetings and a kick-off meeting with TAC members were conducted throughout the study process. These meetings were held on the following dates:

- November 5, 2020 (Kick-Off Meeting)
- January 7, 2021
- March 12, 2021
- May 3, 2021

TAC meetings would be held in advance of SWG meetings to make technical staff would be in support of ideas, concepts, and recommendations being made to various agency senior leadership. TAC members included the following individuals:

- Jae Pullen, NDOT Project Management
- Hoang Hong, NDOT Traffic Operations
- Sam Ahiamadi, NDOT Traffic Operations
- Jeff Bickett, NDOT Traffic Operations
- Mark Wooster, NDOT Traffic Information
- Chris Wright, NDOT Traffic Information
- Laura Wise, NDOT Scoping
- Tara Smaltz, NDOT Scoping
- Jared Feser, NDOT Scoping
- Chris Young, NDOT Environmental
- Alex Wolfson, NDOT District 2
- Scott Hein, NDOT Roadway
- Sam Dowd, NDOT Roadway
- Chris Deal, NDOT Roadway
- Fred Shakal, NDOT Safety
- Lacey Tisler, NDOT Safety

- Michael Carruba, NDOT Right-of-Way (Utilities)
- Kevin Verre, NDOT Planning
- Michael Glover, NDOT Planning
- Meg Ragonese, NDOT Public Information
- Cassie Mlynarek, NDOT Public Information
- Chad Anson, CA Group
- Andrea Engelman, CA Group
- Bardia Nezhati, Parametrix
- Jaclyn Kuechenmeister, Parametrix
- Jennifer Valentine, Parametrix

### **SWG Meetings**

Two SWG meetings and a kick-off meeting with SWG members were conducted throughout the study process. These meetings were held on the following dates:

- November 5, 2020 (Kick-Off Meeting)
- January 11, 2021
- May 13, 2021

In addition to these SWG meetings, a one-on-one SWG was conduct between the study team and RTC staff to specifically discuss concerns and issues near the South Virginia and Veterans Parkway intersections. This meeting was held on September 15, 2021.

SWG meetings would be held between the TAC meeting and public information meeting to inform the SWG on information being presented at the public information meeting. SWG members were solicited for feedback and comments on the public information material being discussed and presented. SWG members included the following:

- Bill Thomas, RTC Executive Director
- Brian Stewart, RTC Engineering
- Dale Keller, RTC Engineering
- Michael Moreno, RTC Public Information
- Dan Doenges, RTC Planning
- Amy Cummings, RTC Planning
- Xuan Wang, RTC Planning
- Angela Fuss, City of Reno Planning
- Carrie Harrison, City of Reno Planning
- Kerri Koski, City of Reno Engineering
- Kurt Dietrich, City of Reno Traffic
- Jeremy Smith, Truckee Meadows Regional Planning Agency
- Mojra Hauenstein, Washoe County Planning
- Sophia Kirschenman, Washoe County Parks
- Julee Olander, Washoe County Community Services
- Dwayne Smith, Washoe County Community Services
- Mitch Fink, Washoe County Community Services

- Brett Rodela, Washoe County School District
- Celeste Arnold, Washoe County School District
- Lt. Luis Ayala-Zapata, Nevada State Police
- Jae Pullen, NDOT Project Management
- Hoang Hong, NDOT Traffic Operations
- Sam Ahiamadi, NDOT Traffic Operations
- Laura Wise, NDOT Scoping
- Chris Young, NDOT Environmental
- Tara Smaltz, NDOT Scoping
- Alex Wolfson, NDOT District 2

- Jennifer Valentine, Parametrix

## **Public Information Meetings**

### **Public Information Meeting #1**

Two public information meetings were conducted as part of the study process. Public Information Meeting #1 was held on January 26, 2021. Due to COVID restrictions in place, this meeting was conducted with a live presentation via a Zoom virtual meeting followed by a question-and-answer session. Questions were provided through a chat function and the presenter, NDOT Project Manager Jae Pullen, restated the question and provided the response so all attendees could hear the question and response. The virtual meeting was held from 5:30 PM to 7:30 PM. The slide presentation was made available for 30 days following the initial Zoom meeting for review and to provide an opportunity for public comment and feedback. In addition, a survey was posted on the study's website during those 30 days. Approximately 33 people attended the Zoom meeting.

### **PIM #1 Notifications**

Notifications for the public meeting included the following:

- E-blasts to internal project team, TAC, and SWG email lists.
- Meeting notification posting on local agency websites and on NDOT's public information web page.
- NDOT press release and associated social media coverage.
- Reno Gazette Journal ad placed along with mailer ad distributed to addresses with ¼ mile of the corridor within the study limits.

## MT. ROSE HIGHWAY CORRIDOR PLAN

- Mailers were provided in both English and Spanish.

**Media Release**

**FOR IMMEDIATE RELEASE**  
Jan. 22, 2021

Nevada Department of Transportation  
Meg Ragonese, Public Information Officer  
E-mail: [mragonese@dot.state.nv.us](mailto:mragonese@dot.state.nv.us)  
Phone: (775) 888-7172 / (775) 443-5926

**NDOT TO HOST PUBLIC INFORMATION MEETING ON  
MT. ROSE HIGHWAY CORRIDOR PLAN**

CARSON CITY, Nev. — With intersection improvements already scheduled for coming years at two Mt. Rose Highway intersections, the Nevada Department of Transportation will launch a virtual public meeting on Jan. 26 to gather public feedback on corridor planning to define future traffic improvements to the lower segment of the highway. The study will envision future traffic needs and potential improvements to provide for traffic accessibility and safety amid community growth.

By visiting the meeting link at [nevadadot.com/mtrose](http://nevadadot.com/mtrose) any time between Jan. 26 and Feb. 9, visitors can scroll through study updates and provide feedback. A live virtual presentation, including question and answer session, will be held at 5:30 p.m. Jan. 26 for those who wish to attend. A recording of the live presentation will also be available on the website after Jan. 26. Both English and Spanish language will be available. Those needing assistance with access to the meeting can contact 702-232-5288 for printed meeting materials or other resources.

With average daily traffic on the valley section of the highway growing from 15,000 vehicles daily in 2014 to nearly 23,000 in 2019, NDOT is conducting the corridor study on Mt. Rose Highway from the Alternate U.S. 395 intersection to Douglas Fir Drive. The corridor study will also review Geiger Grade from the Alternate U.S. 395 intersection to the Veterans Parkway roundabout.

Current and future roadway use will be evaluated including projected traffic volumes through year 2040 at 13 intersections on the corridor. The resulting corridor master plan completed at the end of 2021 will provide a high-level vision for potential options to improve traffic safety and mobility for all transportation types. Potential future improvements would be coordinated between Washoe County, City of Reno, Nevada Highway Patrol, RTC, Washoe and others.

In a recent five-year period 2015 to 2019, there were 248 crashes on the highway. NDOT also has current and planned projects to enhance traffic mobility and safety.

With approximately 80 percent of vehicles traveling more than 10 miles over the speed limit, NDOT in November installed additional speed limit signs to remind motorists to drive safely.

Following a recent road safety assessment, NDOT in 2022 will also add median concrete islands and lengthened turn pockets on Mt. Rose Highway at Callahan Road, as well as reconfigure median islands and turn lanes to channelize and enhance left and right-hand turns between the highway and Edmonton Drive.

Further state transportation information is available at [nevadadot.com](http://nevadadot.com) or by calling (775) 888-7000.

Media Release

## VIRTUAL PUBLIC INFORMATION MEETING

On January 26th, at 5:30 p.m. join the community for a virtual information meeting to discuss the Mt. Rose Corridor plan and the corridor's long-term vision. Any member of the general public is invited to share their concerns, questions and comments.

**LEARN MORE**

Virtual meeting and materials available for public view from 1/26/21 - 2/9/21. Learn more at [nevadadot.com/mtrose](http://nevadadot.com/mtrose). If you need special accommodations or are unable to view the public meeting over the internet please contact NDOT's Public Involvement Specialist Cassie Mlynarek at 702-232-5288.

**NEVADADOT.COM/MTROSE**

## REUNIÓN VIRTUAL DE INFORMACIÓN PÚBLICA

El 26 de enero, a las 5:30 p. m. únase a la comunidad en una reunión informativa virtual para hablar del plan del corredor de Mt. Rose y la visión a largo plazo para el corredor. Animamos a las personas a dar su opinión al plantear dudas, formular preguntas y realizar comentarios.

**MÁS INFORMACIÓN**

La reunión virtual y los materiales estarán disponibles para el público del 1/26/21 al 2/9/21. Más información en [nevadadot.com/mtrose](http://nevadadot.com/mtrose). Si usted necesita alguna adaptación especial o no puede conectar con la reunión pública en el internet, puede contactar con Cassie Mlynarek, Especialista en Participación Ciudadana para NDOT, en el 702-232-5288.

## PIM #1 Survey

As part of the virtual meeting a four-question survey was provided to solicit feedback on the public's concerns and priorities. The four questions were:

1. Identify your #1 concern for the Mt. Rose Corridor
  - a. Safety
  - b. Access
  - c. Capacity and Operations
  - d. Multimodal
2. Identify your #2 concern for the Mt. Rose Corridor
  - a. Safety
  - b. Access

## VIRTUAL PUBLIC INFORMATION MEETING

On January 26th, at 5:30 p.m. join the community for a virtual information meeting to discuss the Mt. Rose Corridor Plan and the corridor's long-term vision. Any member of the general public is invited and encouraged to visit the project site and make their voices heard by sharing their concerns, questions and comments.

El 26 de enero, a las 5:30 p. m. únase a la comunidad en una reunión informativa virtual para hablar del plan del corredor de Mt. Rose y la visión a largo plazo para el corredor. Animamos a las personas a dar su opinión al plantear dudas, formular preguntas y realizar comentarios.

  - c. Capacity and Operations
  - d. Multimodal

The survey received 23 responses and are as shown below.

*Survey Responses*

#### PIM #1 Comments

In addition to the survey responses, 62 comments were provided in relation to the survey questions. These comments are included in Table 1.

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

Table 1. PIM #1 Survey Questions and Responses

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
access, capacity, & are the same thing	see Question 1		
Accessibility in/out of neighborhoods		Pork chop on Edmonton creates a safe access out of neighborhood. Limits a safe exit	
Allow access of CR49 (road just east of Fawn.)	Support mass transit to Incline: Gondola/ Tram Adds to!		
Callahan Ranch & Mt Rose HWY Intersection needs a traffic light.		Callahan Ranch & Mt Rose HWY Intersection needs a traffic light.	
Cutting off resident's ability to access streets (no left turn from Edmonton) without following through with providing access through Thomas Creek			
Dangerous homeless camping in such a high-risk fire area will come with bus transit! need no more multimodal plans!		No multimodal	
Difficulty for residents to safely and efficiently depart their neighborhood in all directions with new traffic patterns. Specifically for the Galena Terrace neighborhood, the recently installed "pork chop" curb leaves no way for residents to leave the neighborhood heading westbound. Instead, drivers must turn right and make a U turn at the next intersection in the middle of the busy highway.		See comment to question 1. The Edmonton drive intersection requires a roundabout or stoplight.	

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
Enforcing speed limits	Access to westbound lanes from Callahan = no pork shop		
Get rid of the pork chop on Edmonton. Allow left turns onto Mt. Rose Highway.	Remove pork chop at Edmonton. Any time it snows or there is ice, everyone jumps the pork chop. The traffic markers appear to be replaced everyone.	Remove the pork chop. No one obeys the no left turn and creates a greater risk of accidents vs. controlled left turns.	Remove the pork chop on Mt. Rose Highway at Edmonton. Why wasn't Butch Cassidy extended to Thomas creek signal? Political penny pinchers.
I am concerned about the functionality of the highway and its lack of vision toward future use. The intersection at Edmonton is a great example of lack of forethought. This pork chop and forced right only turn out of a major neighborhood with two schools, a church, and a recent housing development, is just not adequate or safe for the level of traffic. This turn is also cumbersome, as the zoned elementary and middle school for Rolling Hills are left (to the West) and every parent and bus must turn right and then make a U-turn a short distance down the road, which I know the other neighborhood has also complained about dealing with. There needs to be better traffic flow plans in place that take into account existing conditions AND predictable growth accommodation. The Edmonton pork chop needs to be removed, if the number of cars that have crashed into it was winter hasn't already removed it for us.		Traffic flow that accommodates our growing community! Traffic patterns that allow ease of use for commonly traveled paths (example: Turning left at Edmonton onto Mount Rose highway for children going to either elementary or middle schools)	

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
I submitted this already and my answers haven't changed, but I wanted to add a comment about the number of student drivers in the area with the high school so close. Any way to mitigate accidents for these new drivers is important to me.			
lack of enforcement of speed limit		maintain ability to head west on highway from Callahan Road - no pork chop there please	
Lack of lanes and bad on ramps to freeway			Improvement of Round about congestion. Potentially have access from Geiger grade to Virgina without use of veterans round about.
Lack of police presence	Too many vehicles speeding above speed limits no other concern	No other concerns	No other concerns
Maintaining scenic quality of highway; keep trees, limit signage	People going too fast for conditions; sight distance at Doug Fir	Keeping highway to 2 lanes beyond existing 4 lane section to reduce speeds and maintain scenic integrity	Limit driveway and access points to reduce conflicts. In general I don't think the highway is a great place for pedestrians, bicycles or transit. Park and ride near the Summit Sierra is good.
Multiple deaths, accidents, high speed, poor access	Unsafe access from "Fawn Lane?" area, Edmonton	Mt Rose is a Scenic but non-scenic highway, California side MUCH more scenic	

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
Need better pedestrian/joggers and bicycle areas. Could be a gorgeous multi-use road. Doesn't need more lights, or signage. Sidewalks, clear bike ways, and plantings.	neglect/lack of maintenance.	.	it needs a facelift for the 21st century. It's our gate way to Tahoe, one of the most beautiful places on earth. Mt. Rose Hwy looks like a neglected alley.
No Jersey walls near Douglas Fir to stop people from crashing Down embankments.			
No left turn from Edmonton causes people to make illegal upturns in the middle of the highway.			
Noise from increased traffic		Noise from traffic	
none	none	none - leave it alone	none - leave it alone
Not having a separate left turn lane from MRH onto Douglas Fur southwestbound.			
Remember it's a Hwy !!!	Operations snowplows with cement intersections	Additional road access	
Specifically, a legal right hand turn on Mt. Ranch road	We have to use bike lane to get over to avoid accidents		Fix blind spot at Thomas Creek light for traffic going up Mt. Rose Hwy
Speeding. Need lights at Callahan and Timberline			
The pork chop is the worst thing in the world! Multiple cars have taken out the signs and marker. Many cars make an illegal left turn. Makes traffic flow in and out of the neighborhood unbearable when schools start and end for the day.			

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
The pork chop on Edmondton made that intersection more dangerous! Entering the highway with my back faced to traffic going 65+ and no entrance lane is very dangerous!	Not being able to turn left off Edmondton	Replace the pork chop at Edmondton with a light	
Too many speeders		Area between Douglas Fir and Montreux is heavy deer crossing. Speed limit should be reduced to 45 with flashing warning to watch for deer,	Animal
U-turners at Telluide from Edmonton.	Speeding coming down from Mt Tose		
	for wildlife. Examples: deer, coyote, bobcats, and lost/runaway pets.	in traffic lights at Callahan Ranch and stop signs at Fawn Ln. and Joy Lake Rd. with flashing yellow lights and reduced speed.	This highway is way overdue for signals at Callahan Ranch Rd. It was not this scary in the 70's.
	for wildlife. Examples: deer, coyote, bobcats, and lost/runaway pets.	in traffic lights at Callahan Ranch and stop signs at Fawn Ln. and Joy Lake Rd. with flashing yellow lights and reduced speed.	This highway is way overdue for signals at Callahan Ranch Rd. It was not this scary in the 70's.
	Access but in terms of deceleration/acceleration lanes, turn pockets, crosswalks, bike lanes, room to perform an action (speed up, slow down, spot for bikes/peds) that isn't in main line traffic		

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
	excessive speed. It seems the many people moving here from California are used to 15-20 MPH over the speed limit. As a driver trying to merge unto Mt. Rose the extra speed is dangerous. These people drive like they are entitled. I say mandatory \$500 ticket and get more cops to give them out .		speeding camera with mandatory high dollar tickets
	Keeping it a scenic corridor	Keeping it a scenic corridor	
	Lack of Police presence and traffic patrol.	More signage, MPH, Watch out for animals, driveway opening up ahead	
	Lack of safe Bike Lanes	Vision of safer Bike Lanes	
	Lack of safe turn and acceleration lanes causing excessive noise and high acceleration due to short/uphill need to come to traffic speed	Easier access in and out of traffic for residents. Mitigation of impacts of proposed development at Fawn. Removal of bicycles from Mt. Rose Hwy completely.	- completely AVOIDING any use of Roundabouts. Truckee is a MESS due to them.
	Lack of stop lights at major junctions, i.e. Callahan road! This has been a major source of accidents and loss of life since the insertion of a traffic light at	Traffic light @ Callahan/Mt. Rose	

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
	Thomas Creek several years ago.		
	Lack of traffic lights at Callahan Ranch		
	Maintaining beauty of Mt. Rose Corridor		
	Maintaining the intended purpose of Mt Rose Corridor -- to maintain the beauty of this area along the highway		Maintain the beauty of this area - no further stoplights, no sound walls, etc.!
	Need for traffic circles to replace the signaled intersections as well as the junction of Callahan Road.		
	Restricted turning especially on Edmonton. Left turn should be allowed via high-T improvements		
	Round-about at Callahan Road would be best solution	both vision and pedestrians and bicyclists	
	Speed of vehicles		reducing speed of vehicles

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
	The concrete island at the intersection of Edmonton and Mount Rose. The lack of signs, the turn lane from Mount Rose to Edmonton in both directions. The Turn onto Mount Rose from Edmonton eastbound needs to have a merge lane all Mount Rose. Additionally this area needs to have better speed control around residential intersections		
	Too much traffic and lack of access to and from Edmonton Dr		
	Traffic lights to slow down cars driving along and gain access on/off Mt Rose hwy.		
	Unsafe speed	Reducing speed	
	Unsuitable increases in traffic for scenic corridor		Encouraging traffic to use alternate routes
	We live off Douglas Fir Drive. It is very dangerous to make a left turn. We would hope for a turn lane similar to Joy Lake		

## MT. ROSE HIGHWAY CORRIDOR PLAN

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
		Access for pedestrians and bikes. Also, the noise of the highway, and the beauty of the highway at all points. Please also consider animal crossing areas.	
		Animal migration routes	
		High school students turning left at Edmonton	
		Scenic Corridor (if you can obtain , multimodal, good capacity), then you should also achieve a scenic corridor (one of beauty).	
		There needs to be a light at the Callahan intersection	
			Dark Sky corridor and Scenic Corridor. Highway lights are being added????!!????!!???
			Keeping bicycles off of this highway, they ride side by side creating slower traffic and hazards. There are PLENTY of other areas for bicyclists to ride. Also, bikes should be required to have mini license plates as they often do not obey the rules here.

## MT. ROSE HIGHWAY CORRIDOR PLAN

---

<b>Question 1: Identify your #1 concern for the Mt. Rose Corridor</b>	<b>Question 2: Identify your #2 concern for the Mt. Rose Corridor</b>	<b>Question 3: Identify your #1 priority for the future vision of the Mt. Rose Corridor to address</b>	<b>Question 4: Identify your #2 priority for the future vision of the Mt. Rose Corridor to address</b>
			Multimodal, continued: It would be great to have a usable walk and bikeway along the Mt Rose Highway (or slightly off the highway, and/or at side of it), to enable hiking/biking from the valley west to Mt rose. The current walking and biking path ends at wedge parkway and does not connect with the Galena/Thomas Creek/Whites Creek/Galena Creek trails.
			no round-abouts wanted on 431.
			traffic light needed at Callahan Ranch Rd.; I was involved in an accident there. A light would have prevented the accident.

PIM #1 Presentation

Public Information Meeting #1  
Mt Rose Corridor Study

January 26, 2021  
5:30 pm – 6:30 pm

1

AGENDA

- Welcome and Opening Remarks
- Study's Purpose and Goals
- Schedule
- Existing Conditions
- Community Concerns and Priorities
- Next Steps

*Please type in questions about the presentation or study in the Q&A box and they will be addressed at the end of the presentation.*

2

3

**MT ROSE HIGHWAY APPROACH STRATEGY**

- **Addressing community concerns along Mt Rose Highway**
  - Safety
    - Speeds, poor visibility, limited multimodal opportunities
  - Mobility
    - Driveway access, limited signalized intersections, limited alternative routes
- **NDOT Approach**
  - Evaluate the immediate concerns
    - Studies
    - Intersection improvement project
  - Develop a corridor plan
    - Identify the future needs

4

## Mt Rose Highway Approach Strategy

- Construction Project at Callahan Road & Edmonton Drive intersection

- Scope
  - Raised median islands and lighting improvements
- Schedule
  - Final design fall 2021
  - Begin Construction spring 2022
- Construction Cost
  - \$3,000,000

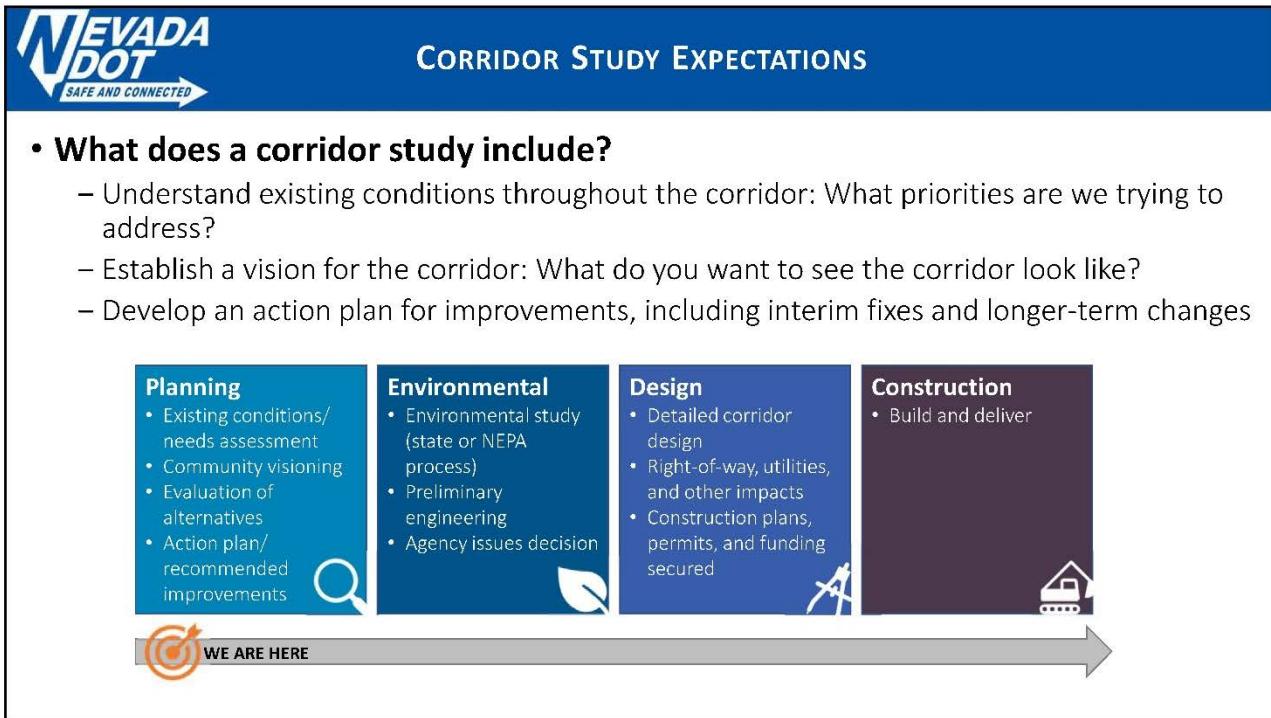

5

## STUDY PURPOSE AND GOALS

- Study Limitations – External to NDOT
  - Development approval process (decisions made locally)
- Purpose
  - Gather public feedback on the corridor
  - Collaborate with local partner agencies to provide a corridor vision to address the top corridor priorities
  - Corridor plan to be a useful tool for future roadway projects
- Goals
  - Short term needs
    - Identify fundable immediate needs
  - Long term vision
    - All agencies to include in future development & roadway plans
  - Corridor Consistency
    - All future development & roadway improvements follow corridor vision

6

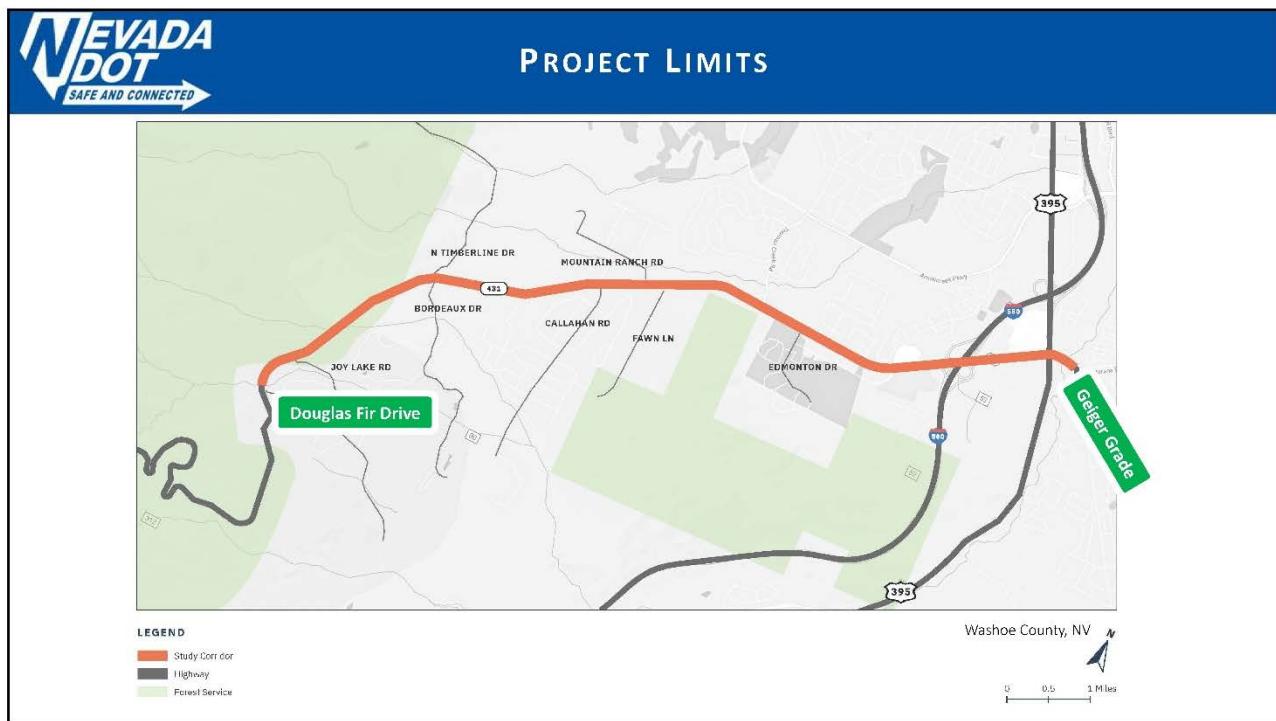

7

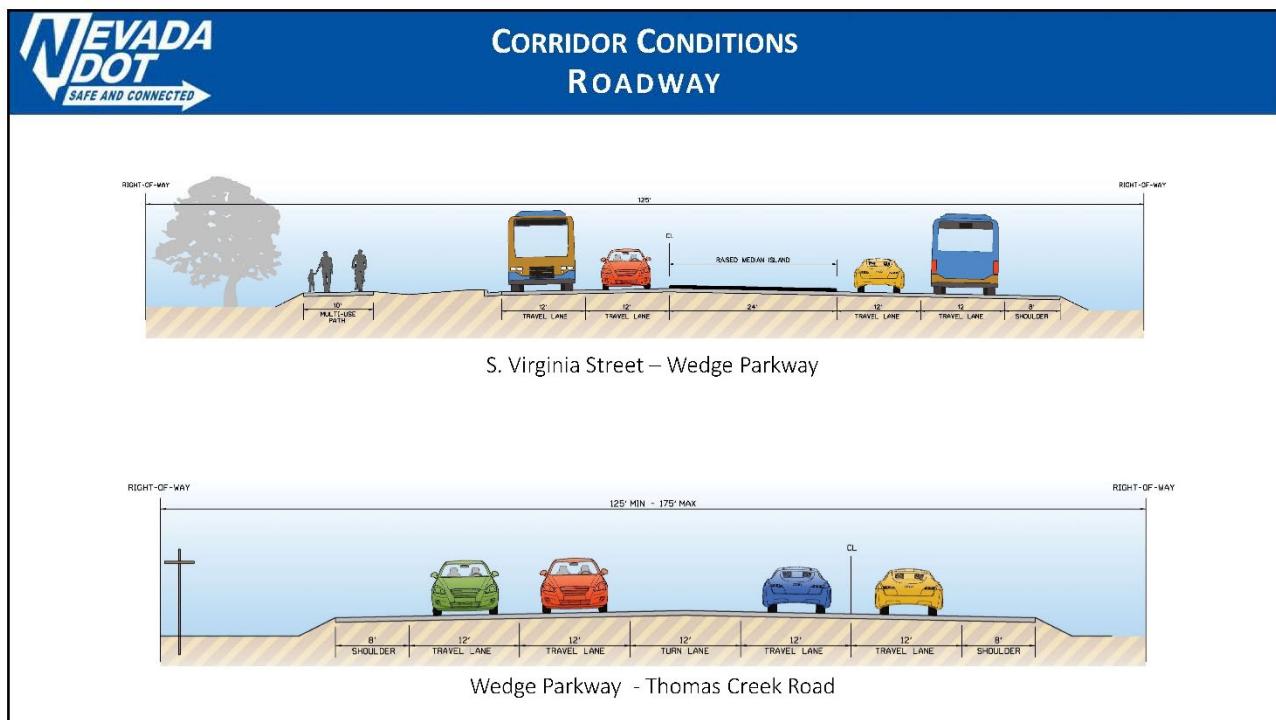

8

Mt Rose Scenic Byway Corridor Management Plan	Washoe County
South Meadows Multimodal Transportation Study	RTC Washoe
Various Community Meetings	

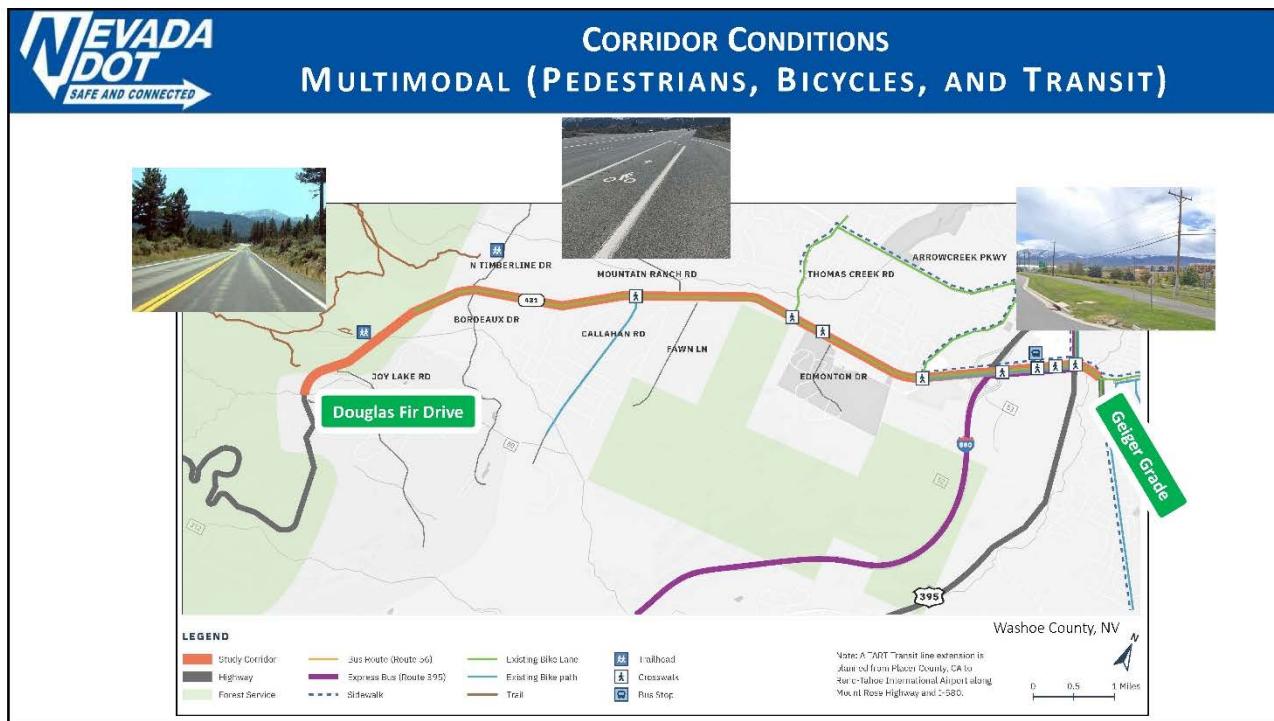

13

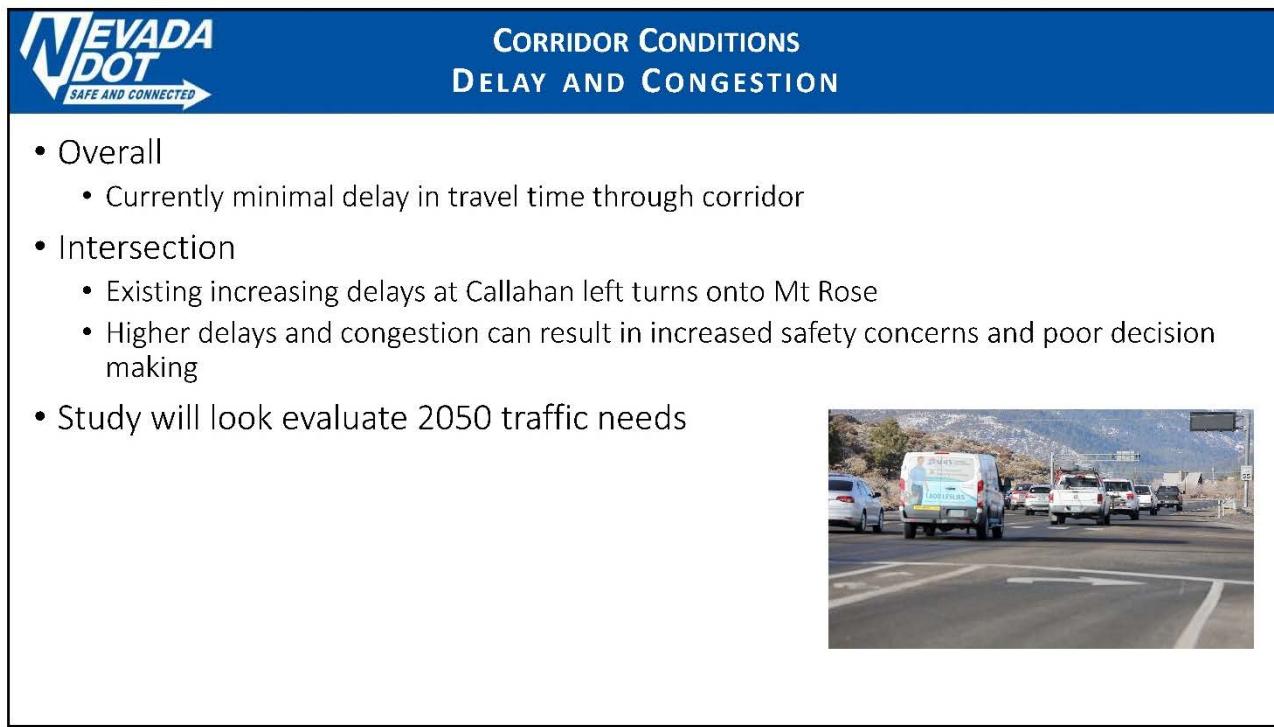

## CORRIDOR CONDITIONS FUTURE LAND USE DESIGNATION (POTENTIAL DEVELOPMENT)

14

15

16

## SURVEY INFO

- Your input matters
- Need feedback on your concerns and corridor priorities for the future
- Why the survey?
  - Identify commonalities or conflicts between various stakeholder feedback
  - Strike a balance between agencies and public feedback
- NDOT still must address baseline needs

Question 1: Identify your #1 concern for the Mt. Rose Corridor

Safety – Examples: Number of or severity of accidents, speeds, sight distance, unsafe feeling  
 Access – Examples: Too many driveways and/or too many intersections  
 Capacity and Operations – Examples: Excessive delays and congestion  
 Multimodal – Examples: Lack of Access and Facilities for Pedestrians, Bicyclists, Recreation and Transit  
 Other: \_\_\_\_\_

Question 2: Identify your #2 concern for the Mt. Rose Corridor

Safety – Examples: Number of or severity of accidents, speeds, sight distance, unsafe feeling  
 Access – Examples: Too many driveways and/or too many intersections  
 Capacity and Operations – Examples: Excessive delays and congestion  
 Multimodal – Examples: Lack of Access and Facilities for Pedestrians, Bicyclists, Recreation and Transit  
 Other: \_\_\_\_\_

17

## WHAT ARE YOUR CONCERNs?

Primary Concern	Example Issues
Safety	<ul style="list-style-type: none"> <li>• Number of or severity of accidents</li> <li>• Speeds</li> <li>• Sight distance</li> <li>• Unsafe feeling making left turns across traffic</li> </ul>
Access	<ul style="list-style-type: none"> <li>• Too many driveways</li> <li>• Too many intersections</li> </ul>
Capacity and Operations	<ul style="list-style-type: none"> <li>• Capacity and Operations</li> <li>• Excessive delays (left turns, stop signs, etc.)</li> <li>• Congestion</li> </ul>
Multimodal (Peds, bikes, and transit)	<ul style="list-style-type: none"> <li>• Lack of availability and access to facilities for pedestrians, bicyclists, recreation, and transit</li> <li>• Lack of feeling safe while using facilities</li> <li>• No connectivity to desirable activities and facilities</li> </ul>
Others	

*Note: Long term development, land use, and development approvals are not within NDOT's jurisdiction. Concerns about these types of concepts will need to be passed along to the City of Reno and Washoe County.*

18

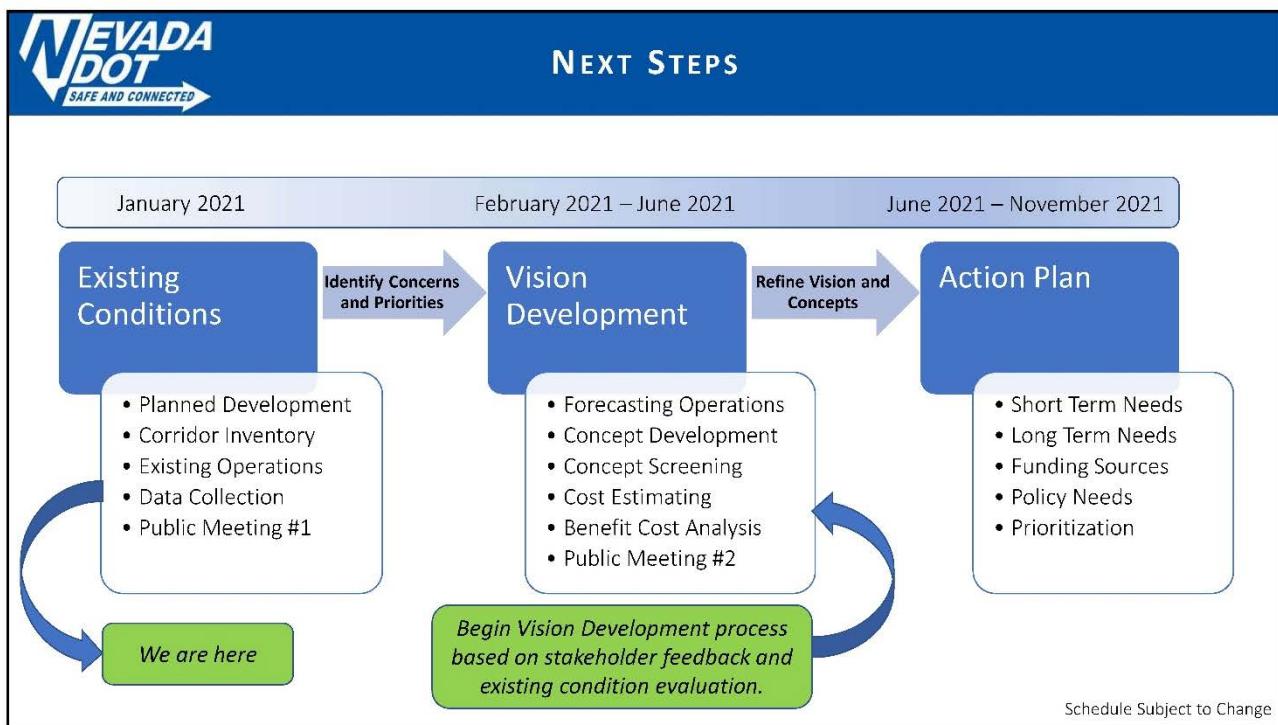

## WHAT ARE YOUR PRIORITIES?

Primary Priority	Vision for Improvement	Trade-offs with Realizing Vision
<b>Safety</b>	<ul style="list-style-type: none"> <li><u>Vision that would reduce speeds</u> (i.e. roundabouts, divided highway, reduced conflict points)</li> </ul>	<ul style="list-style-type: none"> <li>Limited capacity, increase in travel time, driveway consolidation, and less/restricted access</li> </ul>
<b>Access</b>	<ul style="list-style-type: none"> <li><u>Vision that would provide equal or better access</u> via cross streets and potential driveways</li> </ul>	<ul style="list-style-type: none"> <li>Additional intersections, turn pockets, and conflict points</li> </ul>
<b>Capacity and Operations</b>	<ul style="list-style-type: none"> <li><u>Vision that would minimize corridor travel time</u> (i.e. additional lanes, signal prioritization)</li> </ul>	<ul style="list-style-type: none"> <li>Higher speeds, cross street delays, and limited access points</li> </ul>
<b>Multimodal (Peds, bikes, and transit)</b>	<ul style="list-style-type: none"> <li><u>Vision that provides additional multimodal access</u> throughout the corridor</li> </ul>	<ul style="list-style-type: none"> <li>Need for pedestrian signals, traffic calming, and additional pedestrian crossing times at signals</li> </ul>
<b>Others</b>		

*Note: Long term development, land use, and development approvals are not within NDOT's jurisdiction. Concerns about these types of concepts will need to be passed along to the City of Reno and Washoe County.*

### Public Information Meeting #2

Public information meeting #1 was held on August 10, 2021. This meeting was conducted in person at the Tamarack Casino from 4:30 pm to 7:30 pm. This meeting was conducted with a live presentation followed by a question-and-answer session. In addition, a recorded presentation was made available for 30 days following the initial meeting for review and to provide an opportunity for public comment and feedback.

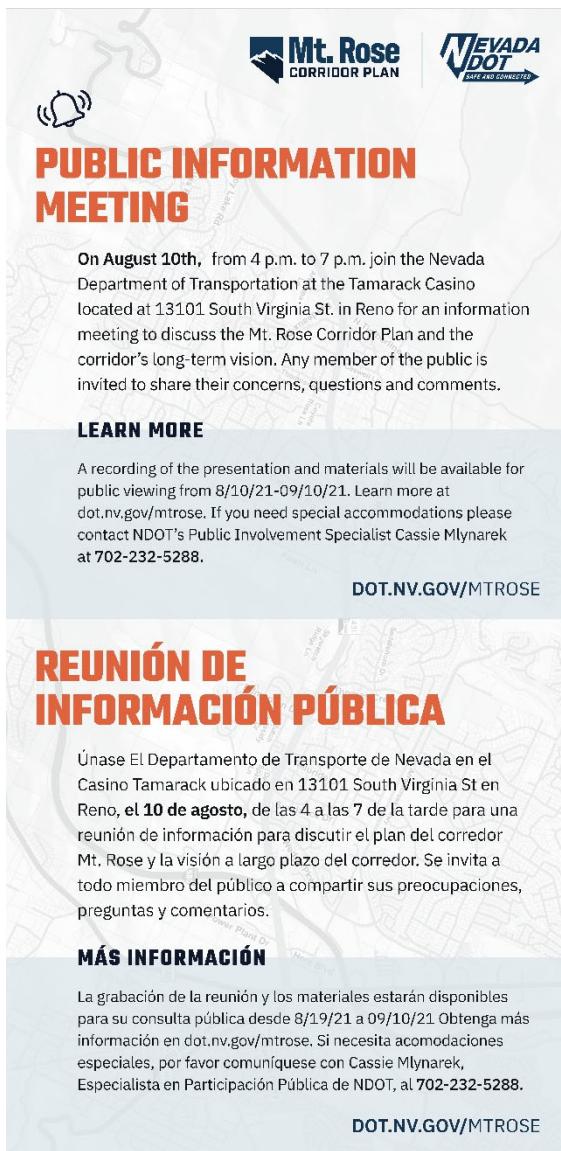

Approximately 58 people attended the live meeting.

### PIM #2 Notifications

Notifications for the public meeting included the following:

- E-blasts to internal project team, TAC, and SWG email lists.
- Meeting notification posting on local agency websites and on NDOT's public information web page.
- NDOT press release and associated social media coverage.
- Reno Gazette Journal ad placed along with mailer ad distributed to addresses with ¼ mile of the corridor within the study limits.
- Mailers were provided in both English and Spanish.

The image shows a media release document from the Nevada Department of Transportation (NDOT). The header features the NDOT logo with the tagline "SAFE AND CONNECTED". To the right, there are social media icons for Facebook, Twitter, and YouTube. The main title is "Media Release". Below the title, it says "FOR IMMEDIATE RELEASE" and the date "July 29, 2021". On the right, contact information is provided: "Nevada Department of Transportation", "Meg Ragone, Public Information Officer", "E-mail: [mraragone@dot.state.nv.us](mailto:mraragone@dot.state.nv.us)", and "Phone: (775) 888-7172 / (775) 443-5926". The main content of the release is titled "NDOT TO HOST IN-PERSON PUBLIC INFORMATION MEETING ON MT. ROSE HIGHWAY CORRIDOR PLAN". It discusses the purpose of the meeting to gather public feedback on corridor planning for future traffic improvements to the lower segment of Mt. Rose Highway (State Route 431). It mentions the location at the Tamarack Casino in Carson City, NV, and the date, time, and format of the meeting. It also provides information on how to attend virtually or provide feedback via email or mail. The release concludes with a statement about the current traffic volume and plans for the corridor, mentioning the Alternate U.S. 395 intersection to Douglas Fir Drive and the Geiger Grade. It also notes a virtual public meeting held in January and the master plan completed at the end of 2021. The document ends with a "Media Release" footer and three small symbols at the bottom right.

**PUBLIC INFORMATION MEETING**

On August 10th, from 4 p.m. to 7 p.m. join the Nevada Department of Transportation at the Tamarack Casino located at 13101 South Virginia St. in Reno for an information meeting to discuss the Mt. Rose Corridor Plan and the corridor's long-term vision. Any member of the public is invited to share their concerns, questions and comments.

**LEARN MORE**

A recording of the presentation and materials will be available for public viewing from 8/10/21-09/10/21. Learn more at [dot.nv.gov/mtrose](http://dot.nv.gov/mtrose). If you need special accommodations please contact NDOT's Public Involvement Specialist Cassie Mlynarek at **702-232-5288**.

**DOT.NV.GOV/MTROSE**

**REUNIÓN DE INFORMACIÓN PÚBLICA**

Únase El Departamento de Transporte de Nevada en el Casino Tamarack ubicado en 13101 South Virginia St en Reno, el **10 de agosto**, de las 4 a las 7 de la tarde para una reunión de información para discutir el plan del corredor Mt. Rose y la visión a largo plazo del corredor. Se invita a todo miembro del público a compartir sus preocupaciones, preguntas y comentarios.

**MÁS INFORMACIÓN**

La grabación de la reunión y los materiales estarán disponibles para su consulta pública desde 8/19/21 a 09/10/21. Obtenga más información en [dot.nv.gov/mtrose](http://dot.nv.gov/mtrose). Si necesita acomodaciones especiales, por favor comuníquese con Cassie Mlynarek, Especialista en Participación Pública de NDOT, al **702-232-5288**.

## PIM #2 Handout

A meeting handout was also provided to the meeting attendees providing some brief project information. This handout is included on the following pages. In addition to the handout were large roll plots of the corridor showing potential alternatives for public feedback. Due to the size of these plots they can not legibly be included in this appendix but can be provided upon request.

**PUBLIC INFORMATION MEETING**

On August 10th, from 4 p.m. to 7 p.m. join the Nevada Department of Transportation at the Tamarack Casino located at 13101 South Virginia St. in Reno for an information meeting to discuss the Mt. Rose Corridor Plan and the corridor's long-term vision. Any member of the public is invited to share their concerns, questions and comments.

Fíjese al día con el estudio del corredor de Mt. Rose y conecte más sobre las actualizaciones al estudio, mapas de datos, planes de visión y de acción y preguntas frecuentes, visitando el sitio web del proyecto en [dotnv.gov/mrose](http://dotnv.gov/mrose).

### MAPA DEL ÁREA DEL PROYECTO

Este estudio del Corredor de Mt. Rose realizado por el Departamento de Transporte de Nevada (NDOT), por sus siglas en inglés, está centrado en la Mt. Rose Highway (Ruta Estatal 31) desde Douglas Fir Drive hasta Alternate U.S. 395 (S. Virginia Street) y Caiger Grade Road desde Alternate U.S. 395 hasta la rotonda de Veterans Parkway.

PUBLIC INFORMATION MEETING

BRIEF DESCRIPTION

On August 10th, from 4 p.m. to 7 p.m. join the Nevada Department of Transportation at the Tamarack Casino located at 13101 South Virginia St., Reno for a public information meeting to discuss the Mt. Rose Corridor Plan and the corridor's long-term vision. Any member of the public is invited to share their concerns, questions and comments.

Nevada Department of Transportation (NDOT), in collaboration with the City of Reno, Washoe County,

and the Regional Transportation Commission (RTC) of Washoe County, is embarking on a planning effort that will address needs and plans to allow the Mt. Rose Highway to continue to provide a safe and effective route for all users in the future. The study will develop a corridor master plan completed at the end of 2021. The plan will provide a high-level vision for potential options to improve traffic safety and mobility for all transportation types.

PROJECT AREA MAP

The Nevada Department of Transportation's (NDOT) Mt. Rose Corridor Study is centered on Mt. Rose Highway, State Route 423, from Douglas Fir Drive to Alternate U.S. 395 (S. Virginia Street) and Caiger Grade Road from Alternate U.S. 395 to the Veterans Parkway roundabout.

PROJECT SCHEDULE

**NOV - Dic 2020**  
Existing project conditions

**JAN 26 2021 & AUG 10 2021**  
Public meetings

**NOV 2020 - APR 2021**  
Traffic analysis and access management

**JAN - MAY 2021**  
Corridor vision development

**DEC 2021**  
Corridor action plan

PROJECT WEBSITE

Stay up to date with the Mt. Rose Corridor Study and learn more about study updates, data maps, vision and action plans, and frequently asked questions, by visiting the project site at [dotnv.gov/mrose](http://dotnv.gov/mrose).

Average daily traffic on the valley section of the highway has grown from 15,000 vehicles daily in 2014 to nearly 23,000 in 2019.

If you need special accommodations please contact NDOT's Public Involvement Specialist Cassie Mlynarek at [NDOTMRoseStudy@ic-group.com](mailto:NDOTMRoseStudy@ic-group.com) or by calling 702-232-5288.

PIM #2 Presentation The following are the slides provided for the public meeting presentation.

1

The slide features the Nevada Department of Transportation (NDOT) logo at the top left, which includes the word "NEVADA" in large letters, "NDOT" in smaller letters below it, and a blue arrow pointing to the right with the words "SAFE AND CONNECTED" underneath. To the right of the logo, the word "AGENDA" is centered in white capital letters. Below the agenda title, a bulleted list of topics is provided: "Welcome and Opening Remarks", "Public Meeting #1 Feedback", "Potential Vision Concepts", "Study Schedule", and "Next Steps". To the right of the agenda list, there is a photograph of a multi-lane highway with mountains in the background. A white SUV is stopped on the side of the road, and a dark-colored car is driving away from the viewer.

2

3

## MT ROSE HIGHWAY UPCOMING IMPROVEMENTS

- **Construction Project at Thomas Creek and Edmonton Drive**
  - Scope
    - Raised median islands and lighting improvements
    - Shared use path between Thomas Creek and Edmonton
  - Schedule
    - Final design early fall 2022
    - Begin construction spring 2023

4

## STUDY PURPOSE AND GOALS

### • Purpose

- Gather public feedback on the corridor
- Collaborate with local partner agencies to provide a multi-modal transportation corridor vision to address the top corridor priorities
- Corridor plan to be a useful tool for future roadway projects
- Limitations
  - Land use and development approval process is determined by local agencies

### • Goals

- Short term needs
  - Identify fundable immediate needs
- Long term vision
  - All agencies to include in future development & roadway plans
- Corridor Consistency
  - All future development & roadway improvements follow corridor vision

5

## CORRIDOR STUDY EXPECTATIONS

### • What does a corridor study include?

- Understand existing conditions throughout the corridor: What priorities are we trying to address?
- Establish a vision for the corridor: What do you want to see the corridor look like?
- Develop an action plan for improvements, including interim fixes and longer-term changes

**Planning**  
• Existing conditions/  
needs assessment  
• Community visioning  
• Evaluation of  
alternatives  
• Action plan/  
recommended  
improvements

**Environmental**  
• Environmental study  
(state or NEPA  
process)  
• Preliminary  
engineering  
• Agency issues decision

**Design**  
• Detailed corridor  
design  
• Right-of-way, utilities,  
and other impacts  
• Construction plans,  
permits, and funding  
secured

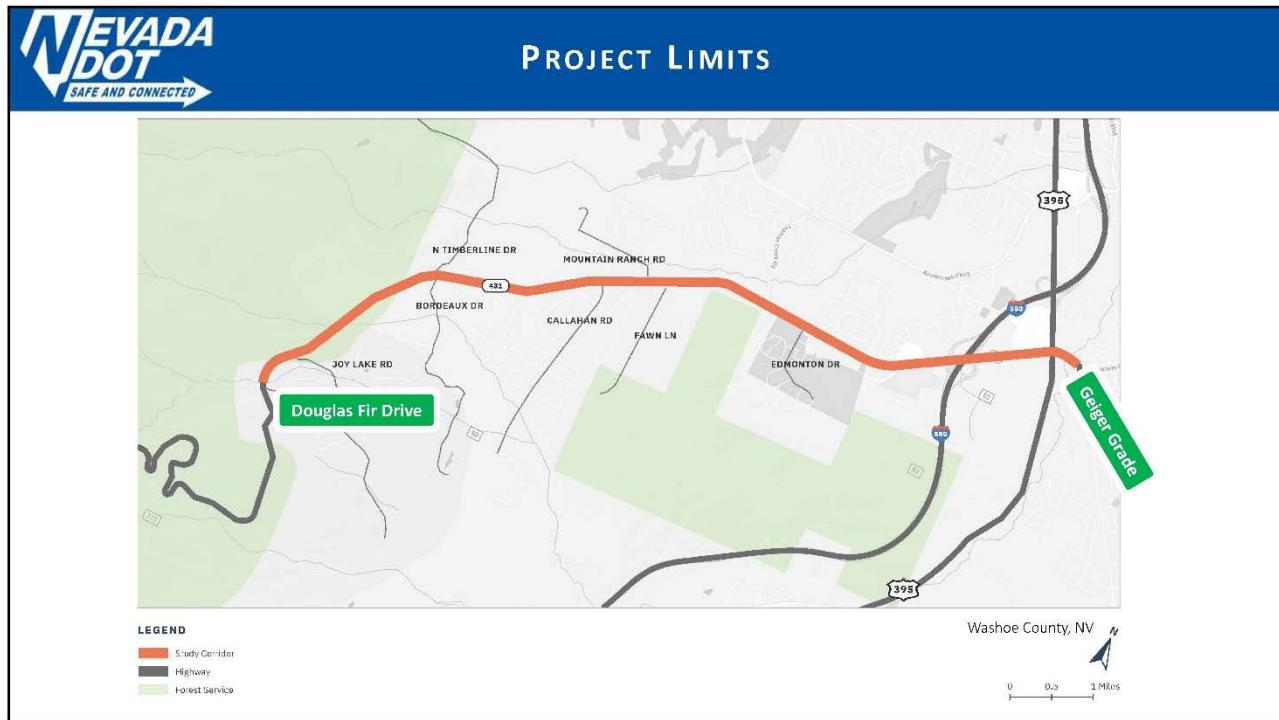

**Construction**  
• Build and deliver

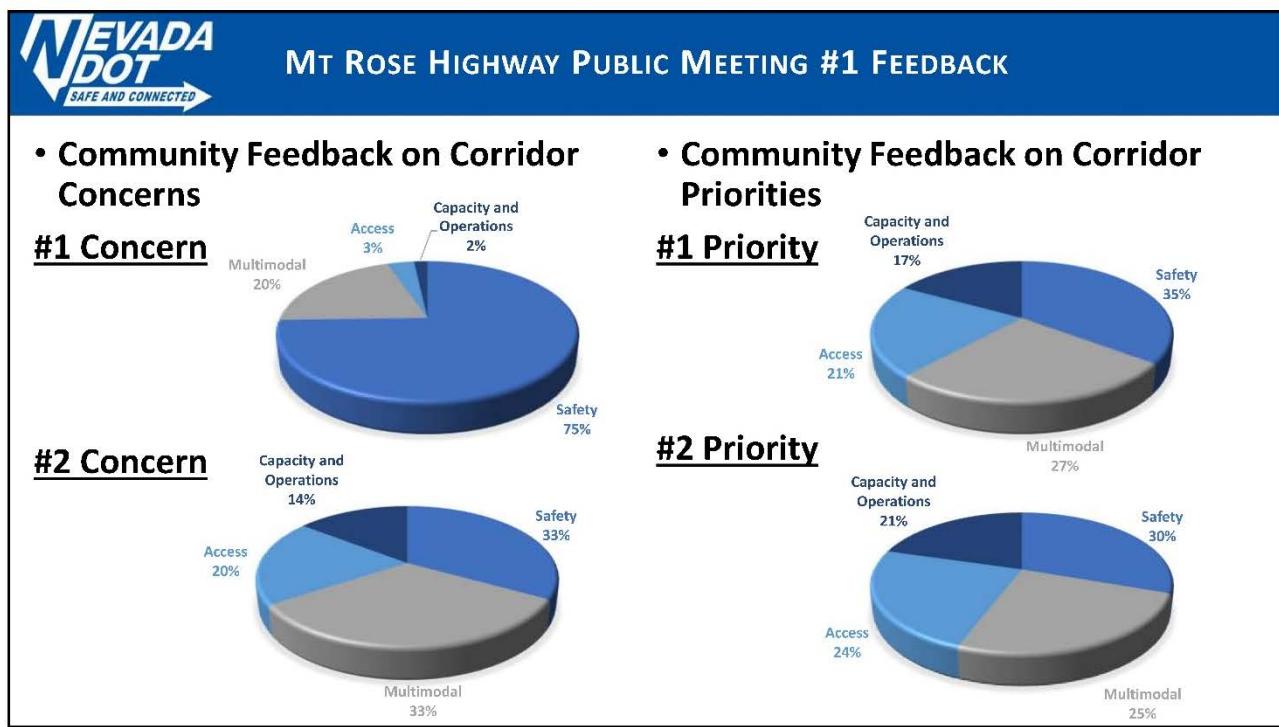

WE ARE HERE

6

7

8

## MT ROSE HIGHWAY PUBLIC MEETING #1 FEEDBACK

- Public feedback on concerns and priorities
  - Safety
  - Multimodal (pedestrian, bicycle, and mass transit)
- Common suggestions
  - Right turn acceleration and deceleration lanes
  - Improved intersection control at major intersections (Callahan, Veterans)
  - Better multi-modal opportunities and access
  - Traffic calming
  - Animal fencing

9

## VISION STATEMENT

*The Mt. Rose Corridors Study's vision is to develop a long term (30-year) implementation framework, including **immediate mobility strategies**, to provide a **safe** and reliable **multimodal** corridor that **maintains connectivity** to the community in a fiscally responsible manner. These strategies will be based on local partner agencies and public input and accommodate future planned development through sound planning policies.*

10

**NEVADA  
NDOT**  
SAFE AND CONNECTED

**CORRIDOR VISION DEVELOPMENT**

- 4 potential Visions developed
  - “Urban Arterial”
  - “Suburban Parkway”
  - “Controlled Access”
  - “Rural”
- Vision differences
  - Major intersection control
  - Roadway treatment of median and outside edge of roadway
  - Access from side streets
  - Pedestrian and bicycle access
  - Posted speed limit
- Common elements (included in each Vision)
  - Animal fencing west of Thomas Creek
  - Shared use path throughout corridor

11

**NEVADA  
NDOT**  
SAFE AND CONNECTED

**TYPES OF INTERSECTION CONTROL**

**Traffic Signal**

Components

- Signal Poles
- Crosswalks

Benefits

- Dedicated green times
- Signalized pedestrian crossing
- Ability to time signals

Concerns

- Higher crash severity
- May not meter corridor speed

PRELIMINARY CONCEPT SUBJECT TO CHANGE

12

**NEVADA DOT**  
SAFE AND CONNECTED

## TYPES OF INTERSECTION CONTROL

**Roundabout**

Components

- Curved entries
- Circular center raised island

Benefits

- Less crash severity
- Metering of corridor speed
- Less conflict points

Concerns

- Favors major street movements
- Unsignalized pedestrian crossing

PRELIMINARY CONCEPT SUBJECT TO CHANGE

13

**NEVADA DOT**  
SAFE AND CONNECTED

## TYPES OF INTERSECTION CONTROL

**J-Cut**

Components

- Right out only
- U-Turn at next reasonably spaced intersection

Benefits

- Eliminates left turns across opposing traffic

Concerns

- Out-of-way travel
- No pedestrian crossing at intersection

PRELIMINARY CONCEPT SUBJECT TO CHANGE

14

**TYPES OF INTERSECTION CONTROL**

**High-T**

Components

- Raised concrete median
- Channelized left turns

Benefits

- Provides "protected" area for exit and entry
- Allows left turn movements

Concerns

- No pedestrian crossing
- Snow removal

PRELIMINARY CONCEPT SUBJECT TO CHANGE

15

**POTENTIAL VISIONS – URBAN ARTERIAL CONCEPT**

Types of Improvements

- Traffic Signals
- Curb and Gutter
- Raised Median
- Innovative intersections (J-Cut and High-T)
- Reduced lane widths

Shoulder to Accommodate Bike Lane

Reduced Width Through Lanes

ROW

MULTI-USE PATH

SHOULDER

TRAVEL LANE

TRAVEL LANE

SHOULDER

Concrete Raised Median

SHOULDER

TRAVEL LANE

TRAVEL LANE

SHOULDER

ROW

Westbound Mt. Rose

Eastbound Mt. Rose

Benefits

- Better access from local streets
- Potentially lower posted speed limits
- Signalized pedestrian crossings
- Potential for lower speeds due to lane narrowing (11' travel lanes)

Concerns

- Potential for higher severity accidents
- Minimal speed metering with signals
- Signals must be warranted prior to installation

16

MT. ROSE HIGHWAY CORRIDOR PLAN

**NEVADA DOT**  
SAFE AND CONNECTED

## POTENTIAL VISIONS – SUBURBAN PARKWAY CONCEPT

**Types of Improvements**

- Roundabouts
- Natural median island
- Curved roadway
- Innovative intersections (J-Cut and High-T)

**Benefits**

- Potential left turn refuges allowing crossing one direction at a time
- Roundabouts at major intersection for constant speed control
- Roadway curvature to control speeds
- “Free flow” through roundabouts

**Concerns**

- Roundabout driver confusion
- Limited left turn access requiring minor out-of-direction travel

17

**NEVADA DOT**  
SAFE AND CONNECTED

## POTENTIAL VISIONS – CONTROLLED ACCESS CONCEPT

**Types of Improvements**

- Frontage roads
- Barrier separated roadway
- Interchange or signalized type intersections

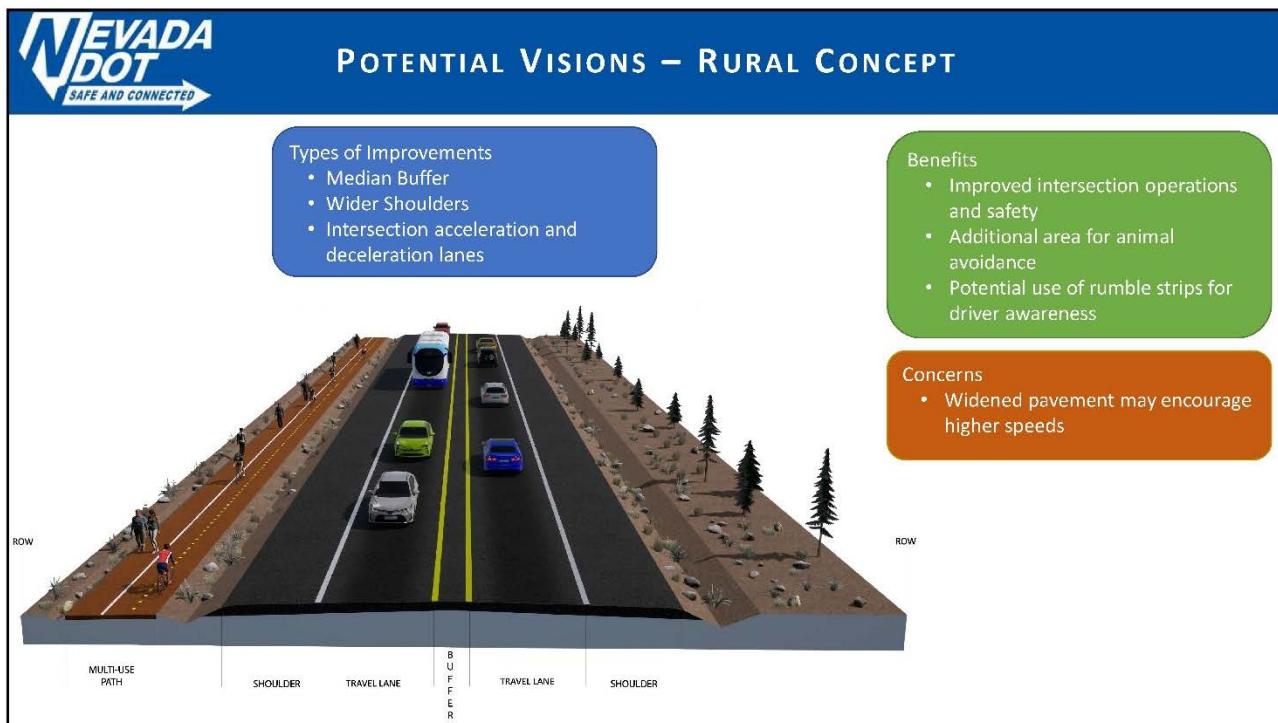

**Benefits**

- Minimized potential for head-on incidents
- Less SR 431 delay
- Signalized left turns

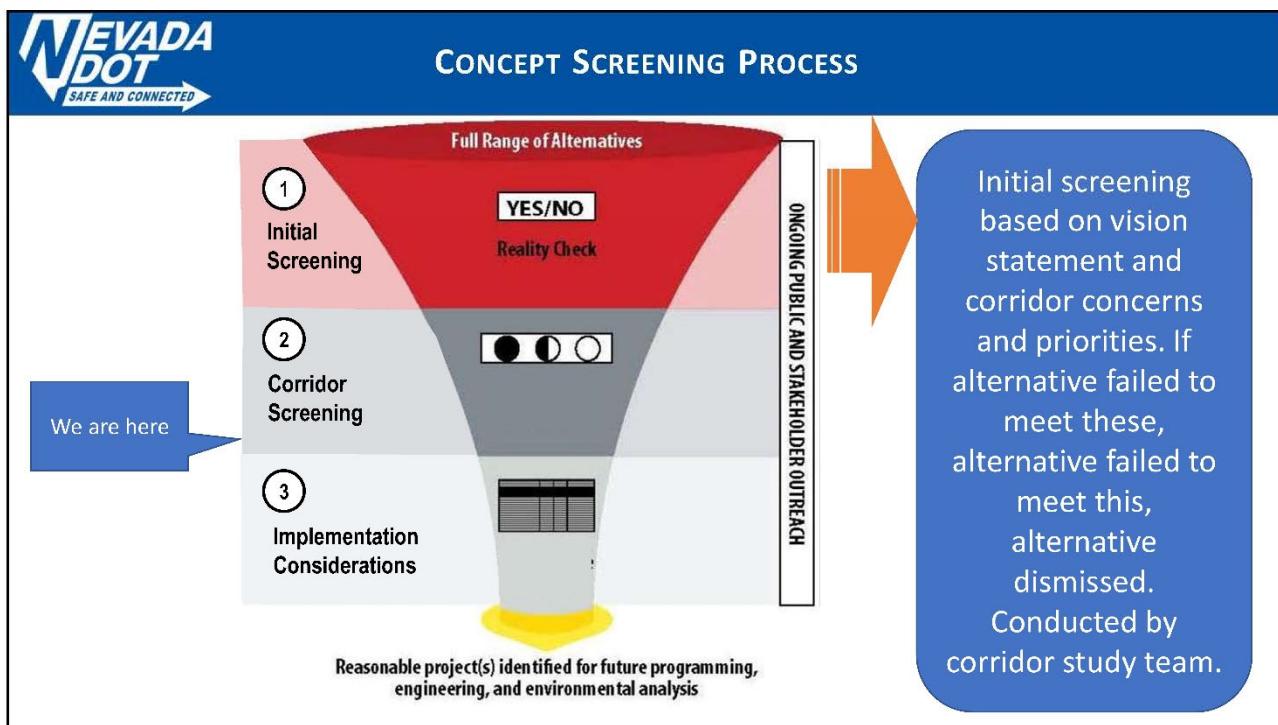

**Concerns**

- Potential need for extensive right-of-way
- High costs
- Incompatibility with scenic byway corridor
- High speeds
- Does not address several common public concerns (speeds, preserve access)
- Access reserved for major intersections

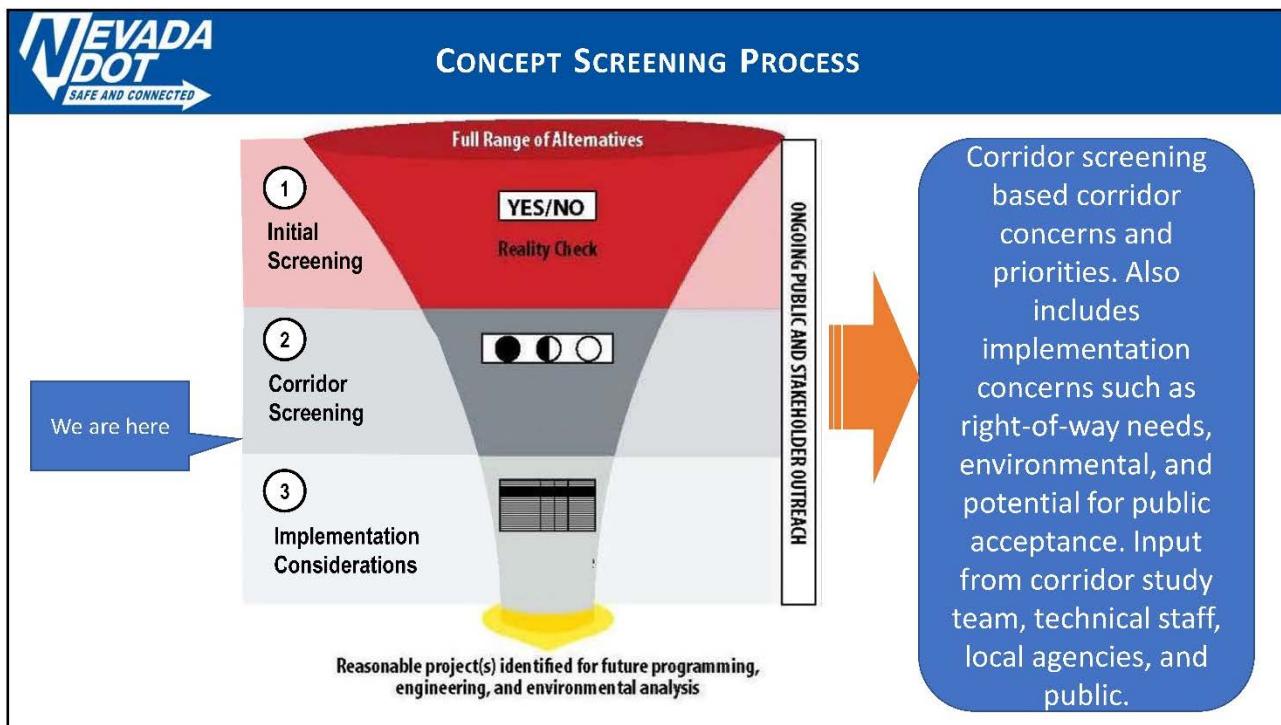

18

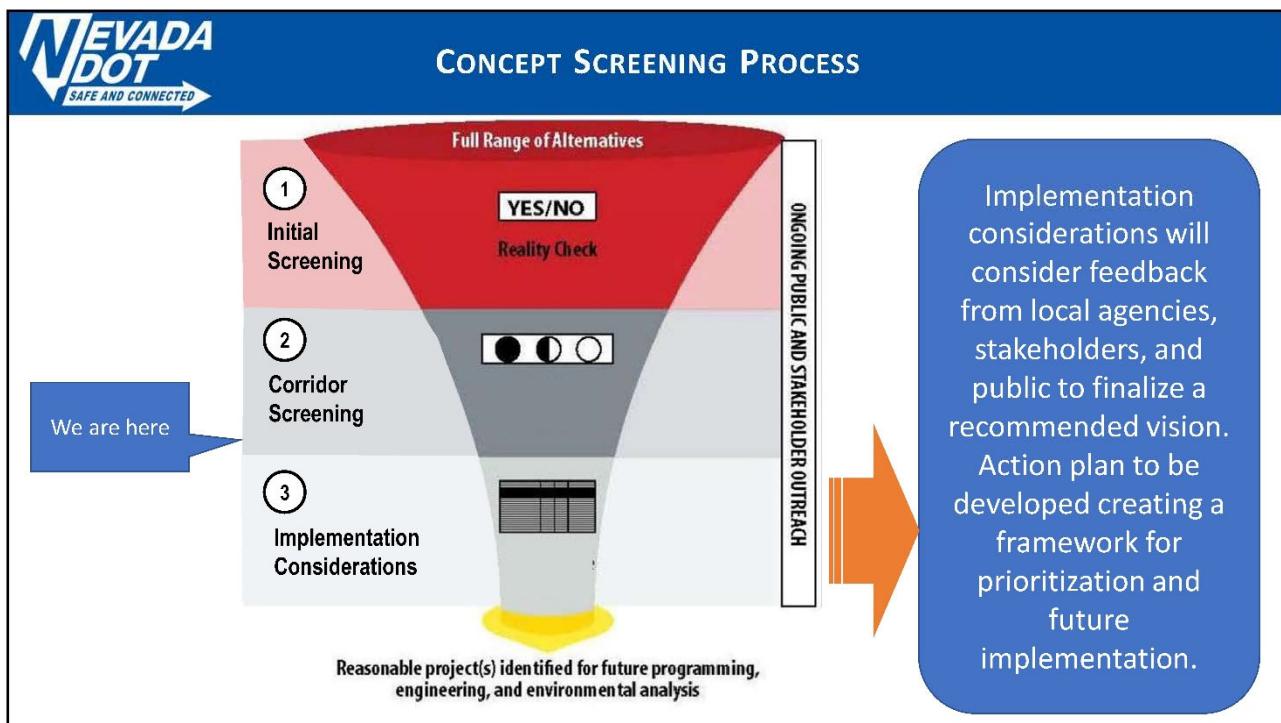

19

20

21

22

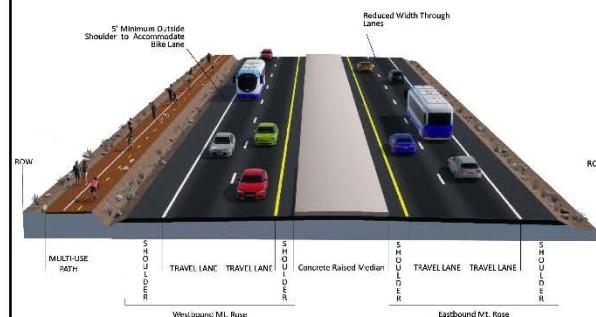

## CORRIDOR SCREENING – PROPOSED VISIONS

### Wedge Parkway to Veterans Parkway

Recommended Vision – “Urban Arterial”

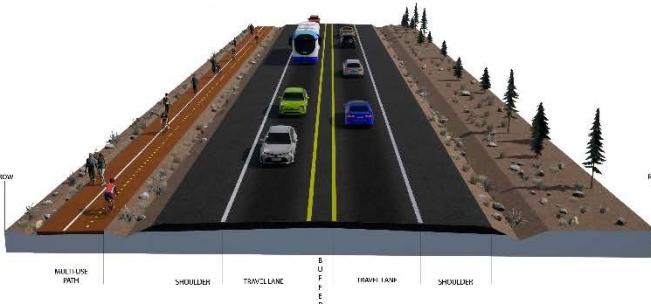

- Existing conditions closely match this vision
- More urban corridor
- Not part of the Scenic Byway corridor

### Douglas Fir to Bordeaux

Recommended Vision – “Rural”

- Two-lane roadway section
- Rural corridor
- Provides additional width for animal avoidance

23

## CORRIDOR SCREENING – COMPARATIVE EVALUATION

### Bordeaux to Wedge Parkway

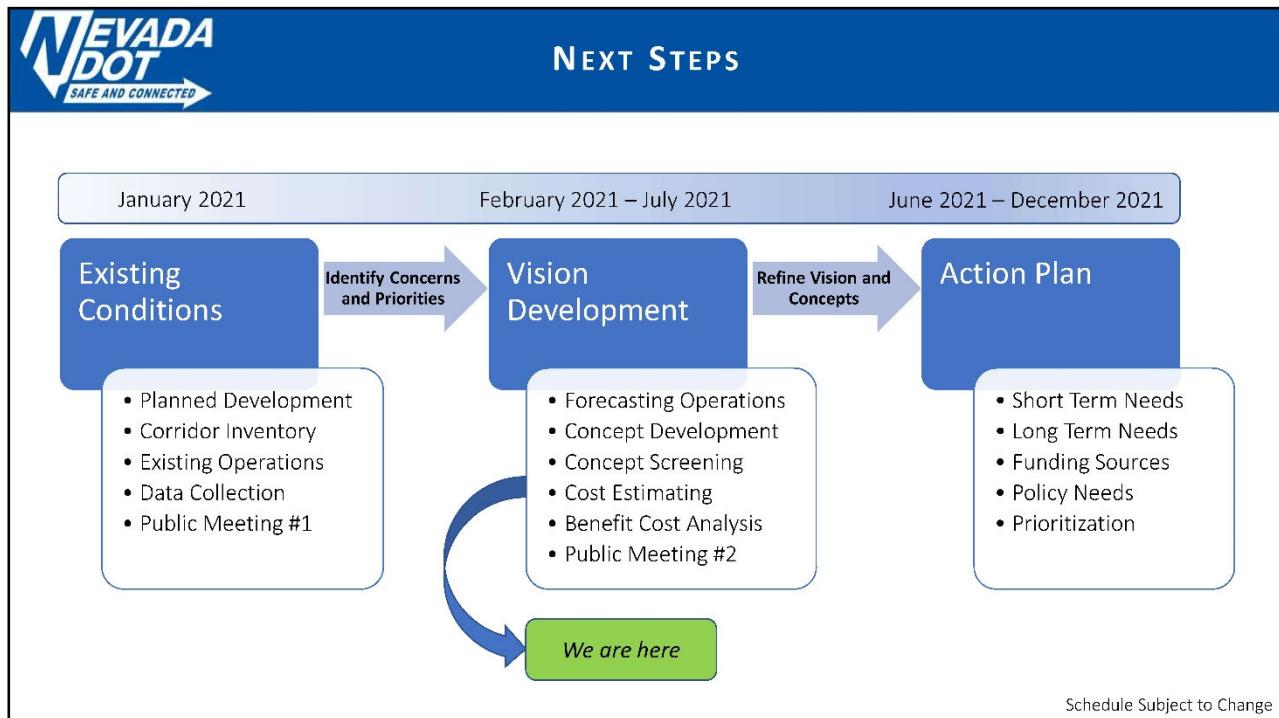

#### Alternative 1 – Urban Arterial

- Safety
  - Raised Concrete Median
  - Signalized pedestrian crossings at major intersections
  - Minimal speed/crash reduction with signal control
  - Constricted roadway feel to control speed
- Multimodal
  - Shared use path. Need separation or barrier protection
- Mobility
  - Potential for signal coordination to avoid “stop and go”
- Access
  - Signalized access at major intersections (when warranted)

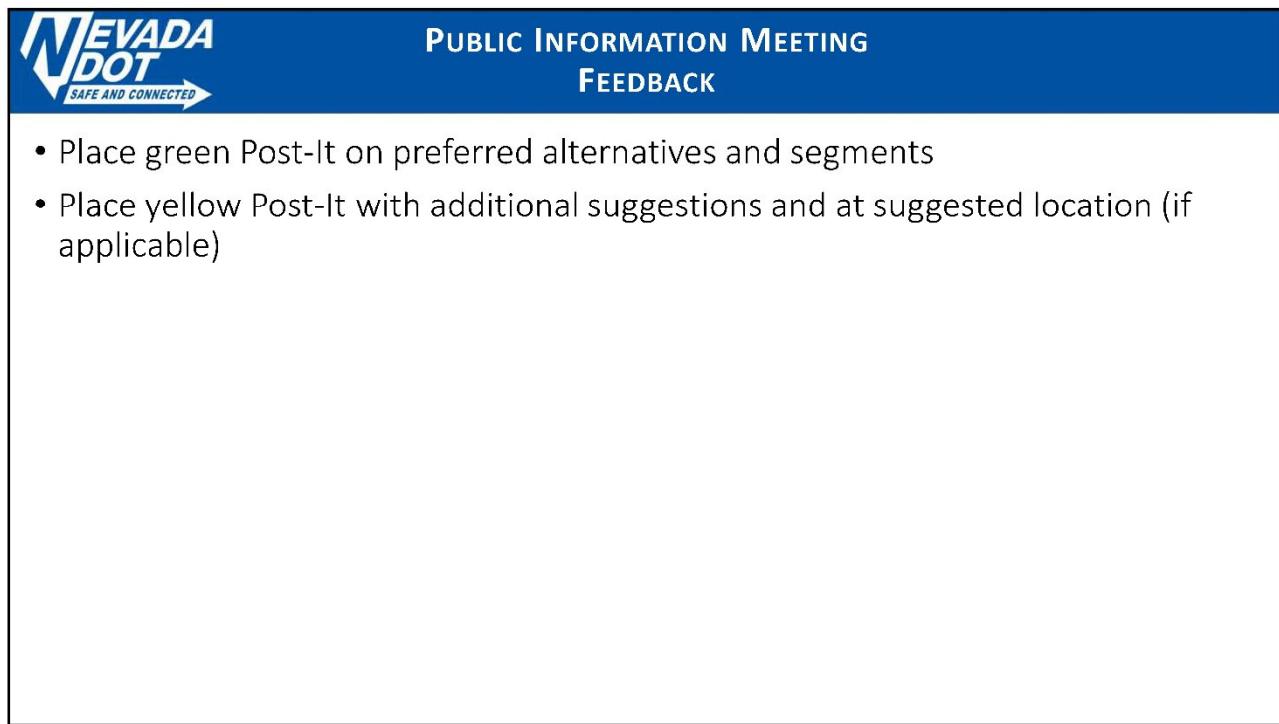

#### Alternative 2 – Suburban Parkway

- Safety
  - Natural median with minimal inside shoulder
  - Rectangular Rapid Flashing Beacons (RRFB) for pedestrian crossings
  - Roundabouts at major intersection to control corridor speed
  - Roadway curves to control speed
- Multimodal
  - Shared use path. Need separation or barrier protection
- Mobility
  - “Free flow” roundabout characteristics
- Access
  - Potential for left turn refuges depending on median width.

24

28

### **Study Email**

A study specific email was established during Public Information Meeting #1 and remained in service throughout the study process. This email was constantly monitored by the study team with email responded to within 24-48 hours. Approximately 118 emails were received through this communication platform and provide a wide variety of comments, statements, and over thoughts about the corridor. Many of these comments were able to be considered as part of the vision development, screening, evaluation, and recommendation process.

# Planning and Environmental Linkage (PEL)

## Initial Planning and Environmental Linkage (PEL) Summary

### Purpose of PEL and Regulatory Framework

PEL, or Planning and Environmental Linkage, is a high-level, early-planning study process that represents an approach to transportation decision-making that considers environmental, community and economic goals early in the planning stage and carries them through project development, including design and construction. The goal of PEL is to gather feedback during planning to inform the environmental review process, including the National Environmental Policy Act (NEPA). The general outcome of a PEL includes:

- Established the vision and Identifies transportation issues
- Initiates coordination with oversight agencies, stakeholders and members of the public
- Streamlines the overall project development process and minimizes duplication in decision-making
- Develops the need and purpose for proposed improvements
- Promotes efficient and cost-effective solutions and environmental stewardship

Without PEL, the decisions reached during the planning study usually need to be revisited to be valid in NEPA. This results in a repetition of efforts which translates into additional project development time and expense. PEL honors decisions made during planning throughout public involvement and resource agency coordination.

PEL is often used when:

- A need has been identified and planning funds have been dedicated towards identifying possible alternative solutions, but no construction funding has been identified or committed.
- The potential project is large in scale with large or complex potential impacts, and a long lead time may be needed for different elements.
- The corridor includes a large geographic scale and/or regionally significant proposal that could result in multiple programmable projects with independent utility and logical termini.
- There are complex community impacts or complex environmental constraints.
- There are known or anticipated public controversy about the scope, need, purpose, or potential alternatives.
- Too many alternatives exist for an efficient NEPA process.
- Even with a lot of initial planning work, NEPA will not meet the Environmental Assessment (1 year) or Environmental Impact Statement (2 year) time limits.

NDOT developed a PEL Questionnaire and Checklist

(<https://www.dot.nv.gov/home/showdocument?id=4962>) to aid in documenting planning methods, findings, and potential environmental concerns in a consistent and orderly fashion.

### ***Initial PEL Purpose – Mt. Rose Corridor Plan***

A subset of questions from the NDOT PEL checklist will be documented as part of this memo, which serves as an *Initial PEL for the Mt. Rose Corridor Plan*. The choice to develop an abbreviated PEL has been

## MT. ROSE HIGHWAY CORRIDOR PLAN

made to document pertinent public and stakeholder decisions made regarding the ultimate vision for Mt. Rose Highway. As a high-level planning study, detailed analysis and decisions were not made on specific corridor improvements. Rather, consensus was built around the corridor vision, which will guide development and implementation of specific projects by a variety of agency partners in the future.

It is expected that this Initial PEL will evolve as corridor planning advances and matures.

### Mt. Rose Corridor Plan Overview

State Route 431 (SR 431), locally known as the Mt. Rose Highway, is a 24.5-mile highway in Washoe County, Nevada, that connects Incline Village at Lake Tahoe with the Reno-Sparks metropolitan area (Figure 1). The highway, a Nevada Scenic Byway, takes its name from Mount Rose, which lies just off the highway.

In recent years, the corridor has faced increased pressure from new development, increasing speeds, and rising safety concerns. Based on these needs, the Nevada Department of Transportation (NDOT), in collaboration with the City of Reno, Washoe County, Washoe County School District, the Regional Transportation Commission (RTC) of Washoe County, Nevada State Police (NSP), and the Truckee Meadows Regional Planning Agency (TMRPA), have completed a corridor planning effort for the northeastern 7.5 miles to address these needs, establish a long-term vision for the corridor, and determine potential improvement concepts to allow the Mt. Rose Highway to continue to provide a safe and efficient route for all users.

**Figure 1. Mt. Rose Corridor Study Area and Vicinity**

### Mt. Rose Highway Initial PEL

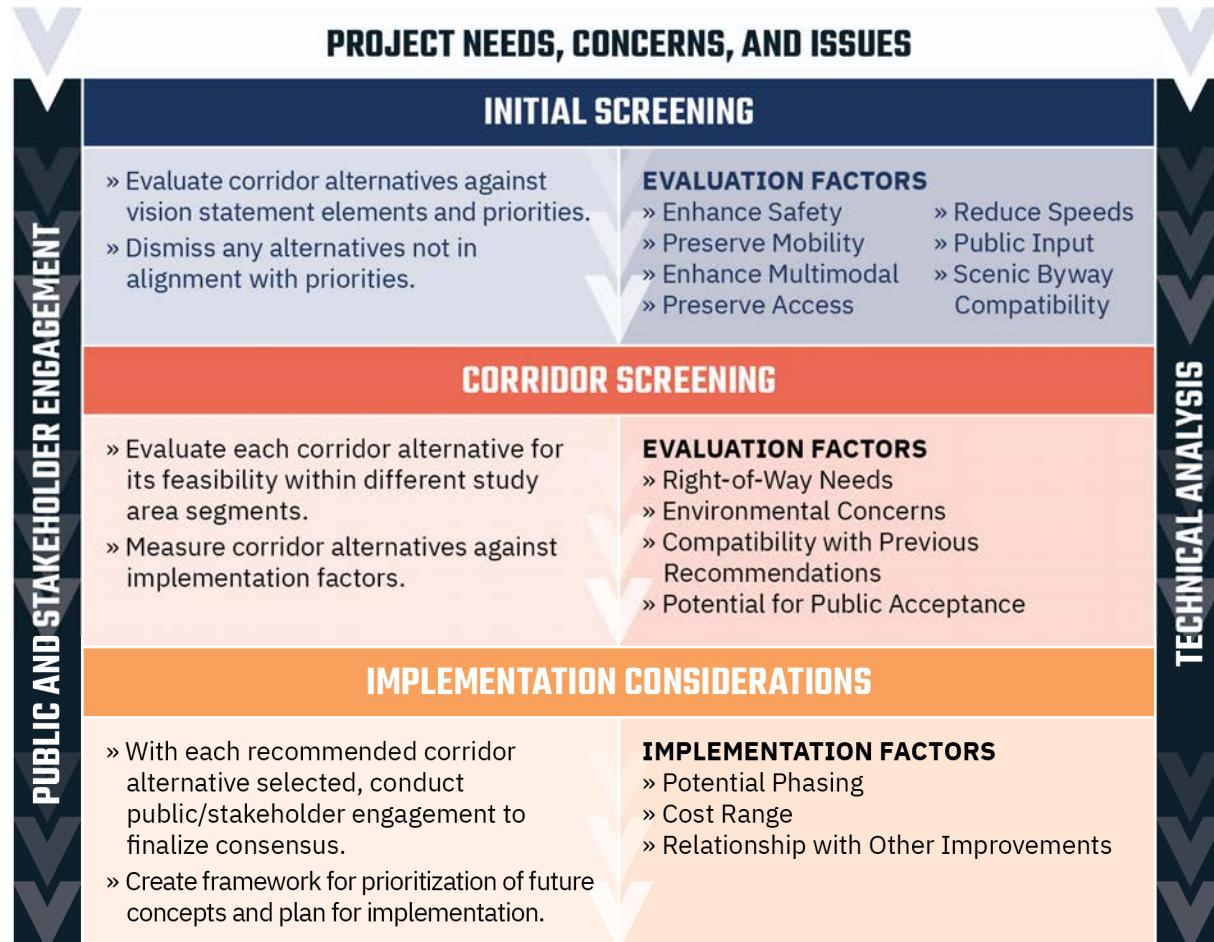

The desired outcomes for this Initial PEL are two-fold:

- Develop a consensus-based vision for future improvements, including recommended corridor characteristics
- Identify stakeholder partners and future roles/responsibilities to implement the corridor vision

**Study Process**

This corridor planning process for Mt. Rose Highway is illustrated in Figure 2, which includes a two-part screening, along with definition of implementation considerations. Evaluation factors for each step in the process are shown in the graphic below.

Figure 2. Mt. Rose Corridor Study – Planning Process

Overall, the process commenced with a review of existing and planned conditions along Mt. Rose Highway from the Geiger Grade roundabout (Veteran's Parkway) on the east to Douglas Fir Drive. This included a general review and the built and natural environment, but not at a pre-NEPA resource specialist level.

The study area was divided into four segments for more context-sensitive consideration of each corridor alternative, ensuring the greatest compatibility with adjacent land uses and roadway function.

Existing conditions information was brought to the stakeholders and public to receive input on their priorities and concerns for Mt. Rose Highway, leading to development of the corridor vision. The corridor vision served as the guiding principle for the rest of the study – informing the development and evaluation of alternatives, and selection of a recommended corridor character for the differing project segments.

The study included two rounds of public outreach and regular stakeholder coordination to receive feedback on study progress and decisions throughout the process. Extensive coordination occurred with

NDOT and RTC near the end of the study to ensure that the recommendations set the foundation for further planning, environmental, and/or design to advance in a timely manner.

### ***Corridor Vision***

A primary purpose of this Initial PEL is to document development of the corridor vision and decision on the recommended corridor characteristics. A formal purpose and need was not developed, however the corridor vision serves as the overall framework for why this study is needed and what it will achieve.

This study included two rounds of public meetings, an online survey, monthly meetings with the Technical Advisory Committee, and quarterly meetings with a Stakeholder Working Group. Study partners included:

- City of Reno
- Nevada Department of Public Safety
- NDOT
- RTC of Washoe County
- Truckee Meadows Regional Planning Agency
- Washoe County
- Washoe County Parks and Recreation
- Washoe County School District
- U.S. Forest Service

Data, input, and feedback were paired with concerns and priorities expressed through a study survey to establish the corridor vision and prioritize alternatives.

The top transportation priority expressed for the corridor was safety, with nearly 75% of all survey participants ranking this first. Safety concerns included high crash rates, especially fatalities; high speeds; compromised sight distances; left turns across traffic; and animal crossings. The second highest priority was multimodal travel, including connectivity to facilities for pedestrians, bicyclists, and trails; feeling of being safe while using multimodal facilities; and connectivity to desirable activities and destinations.

### **Vision**

The Mt. Rose Corridor Study's vision is to develop a long term (30-year) implementation framework, including immediate **mobility strategies**, to provide a **safe** and reliable **multimodal** corridor that maintains connectivity to the community in a fiscally responsible manner. These strategies will be based on local partner agencies and public input and accommodate future planned development through sound planning policies.

### **Vision Characteristics – Recommended Corridor Alternative Concepts**

Based on the vision identified, a series of corridor alternatives reflecting different characters or roadway functions were developed for Mt. Rose Highway. A two-part screening process was carried out to evaluate the alternatives, including consideration of input received from the public meetings, stakeholder engagement, and past study recommendations to determine which concept best fit the corridor context and met the corridor vision.

Three different corridor concepts were selected, as shown in Figure 3:

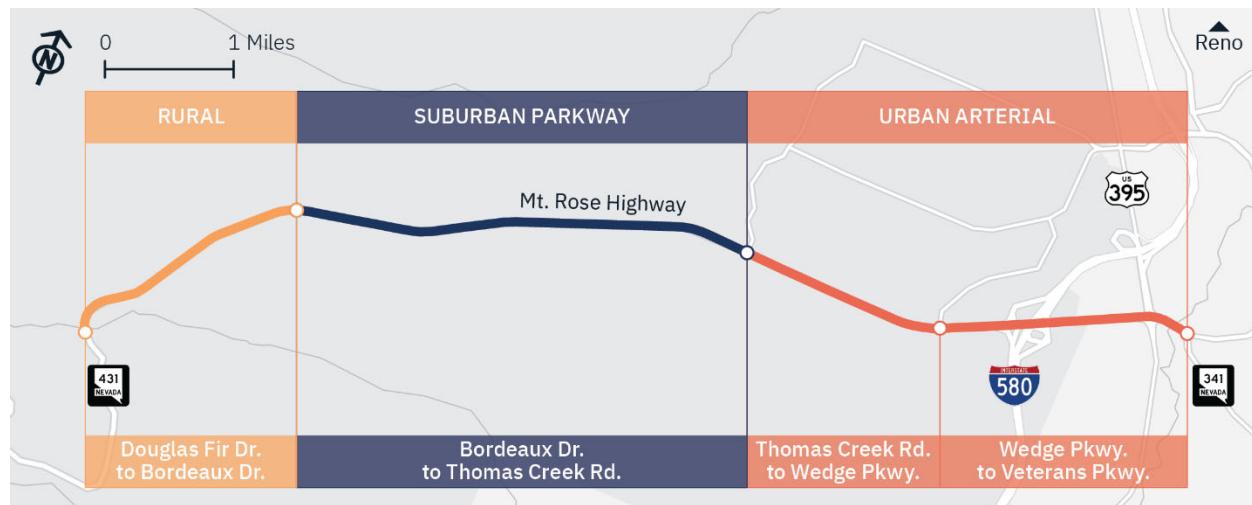

- Implement **Urban Arterial** corridor alternative concept in the two most eastern segments, from **Thomas Creek Road to Veterans Parkway**. These segments are the most developed with a diversity of land use types that lend toward a more urban roadway type. Traffic will be controlled with signalized intersections, narrowed lane widths, and a raised median. The Veterans Parkway roundabout could

## MT. ROSE HIGHWAY CORRIDOR PLAN

be enhanced for better operations. Public feedback expressed interest in maintaining neighborhood and commercial access points.

- Implement **Suburban Parkway** corridor alternative between **Bordeaux Drive and Thomas Creek Road**. This segment forms the transition between the more urbanized area near the freeway to the more rural section heading into the National Forest. This selected corridor alternative reflects that transition with a reconstruction concept to provide a larger natural median, introduce slight roadway curvature, and utilize narrower lanes all to control speeds while maintaining scenic byway characteristics. It would also use roundabouts to consistently slow and direct traffic. Public feedback was very positive in regard to maintaining traffic flow and local street access, while slowing speeds through this primarily residential area.
- Implement **Rural** corridor alternative between **Douglas Fir Drive and Bordeaux Drive**. This segment enters/is partially bordered by National Forest Service land and becomes a much more rural and meandering route with greater grade changes and lower speed limit (45 mph). As a two-lane corridor, this concept would provide widened shoulders for avid bicyclists or room to pull off for animal avoidance. Public feedback has continually requested a safer pedestrian crossing to the Galena Creek Visitor's Center. Therefore, an enhanced trail pedestrian crossing has been identified to allow recreational visitors to safely cross the highway via a future overpass crossing.

**Figure 3. Mt. Rose Selected Corridor Vision Concepts**

The Mt. Rose Corridor Plan (final report) outlines a series of phased improvements that could meet the vision concepts presented above. These improvements include such options as intersection treatments (e.g., traffic signals, roundabouts), corridor widening, parallel multi-use trail, speed changes, etc. It is envisioned that more detailed scoping and design work will refine and advance these concepts.

### Implementation Partners

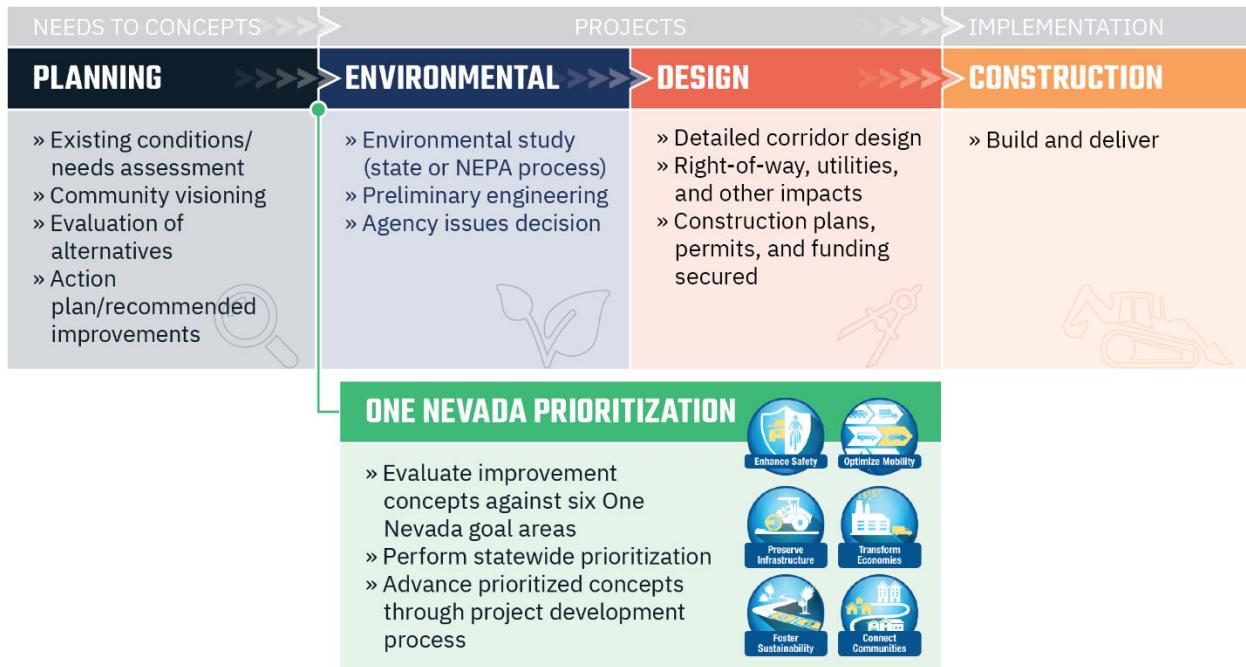

NDOT is expected to advance implementation for the major roadway improvements included as part of the vision concepts. RTC of Washoe County, the U.S. Forest Service, City of Reno, Washoe County, and private developers will take the lead on other project components. The “Implementation of the Vision” chapter within the Final Report outlines the logical entity to take primary responsibility for the different recommended actions.

For NDOT-led concepts, Figure 4 presents the typical project development process, as transportation needs are turned into constructible projects. At this stage of project development, Mt. Rose Highway

## MT. ROSE HIGHWAY CORRIDOR PLAN

Corridor Study recommendations are “concepts”. Upon completion of this study, the corridor vision recommendations will move through the One Nevada prioritization process to advance to the next step, which could include environmental review, preliminary engineering, or detailed design.

**Figure 4. Project Development Process**

### PEL Recommendation

This Initial PEL documents the comprehensive visioning process and decisions that took place as part of the Mt. Rose Corridor Study and thus, the decision on the corridor vision and segmented vision concepts should not change in the future. This establishes the consensus-based and context-sensitive decisions on what roadway framework and function best meets each segment. Individual projects that achieve these vision concepts could change from what is presented in the Final Report, but they should reflect the overarching intent of the corridor vision concepts.

Future phases of work should:

- Continue to engage the public and stakeholders
- Implement a series of common elements throughout the corridor:
  - Parallel multi-use path, including pedestrian crossing near Galena Creek Visitor's Center
  - Driver feedback signs
  - Wildlife fencing
  - Safety countermeasures
- Work with stakeholders to advance near-term spot improvements:
  - Veterans Parkway roundabout operations
  - Toll Road extension
  - Callahan intersection improvements
- Investigate access or right-of-way issues with corridor reconstruction concepts

## **MT. ROSE HIGHWAY CORRIDOR PLAN**

---

### **Concurrence**

By signature, we concur that the transportation planning document meets the following criteria in terms of acceptability for application in NEPA projects:

- Public involvement (outreach and level of participation)
- Stakeholder involvement (outreach and level of participation)
- Resource agencies' involvement and participation
- Documentation of the above efforts
- Applicability of the general findings and conclusions for use, by reference, in NEPA documents
