

PROJECT DESCRIPTION AND PURPOSE

Project Area

SR 169 is a two-lane rural major collector, also known as Moapa Valley Boulevard, that begins near the Lake Mead National Recreation Area boundary south of Overton and continues to the Interstate 15 (I-15) Logandale Interchange.

Project Purpose

This project will enhance safety, drainage, and roadway operations along SR 169 from Canal Avenue to I-15. It will provide pavement preservation activities within the corridor and construct flatter slopes along the edge of the roadway to create a clear zone. Additional pavement will be constructed outside the standard travel lane to serve as a wider shoulder area and provide a safer travel space for bicyclists in each direction. A portion of the road will be constructed to provide a four-foot-wide striped median to reduce the potential of head-on crashes. A truck climbing lane will be constructed in the northbound direction, starting at Waterline Road and end approximately one mile north of Waterline Road.

Project Details

- Flatten roadway slopes
- Provide wider shoulders
- Construct buffered bike lane
- Construct a northbound truck climbing lane
- Additional lanes for turning vehicles at the Waterline Road intersection
