INTRODUCTION

The purpose of this publication is to provide the Nevada Department of Transportation (NDOT), the Nevada Department of Motor Vehicles and Public Safety (DMV/PS), and other State and local authorities with information on Nevada's traffic crash problems. It is one in a series to be provided annually. The data has been extracted from NDOT's Crash Analysis System (CAS). The fatal crash data represented within may not be consistent with data produced from the Fatal Analysis Reporting System (FARS). The two systems were developed independently and are used for different purposes.

Each year changes and improvements are incorporated into this document. The 2000 Nevada Traffic Crashes was solely produced from NDOT's Crash Analysis System. Due to change in the National Maximum Speed Limit in December of 1995 and the safety issues surrounding it, we have included statistics depicting speed related crashes, percentages and rates.

This document was prepared by personnel of the Safety/Traffic Division of NDOT; however, the publication and the statistics therein would not be possible if it were not for the dedicated men and women of Nevada's state and local law enforcement agencies who respond to the scene of the 58,000 plus traffic crashes annually on Nevada's streets and highways. After they treat the injured and secure the scene, they methodically and professionally record the facts on a traffic crash report form.

The culmination of their efforts then become the facts and statistics you see reflected in this publication. We appreciate and respect their work. In addition to recording the facts, they provide information necessary for problem identification. Problem identification drives the planning of specific enforcement, engineering, and education efforts, which can be applied to decrease the number and severity of crashes on our streets and highways. Subsequently, lives can be saved, injuries prevented, and property damage and economic loss can be significantly reduced.

Dear Reader:

It is my pleasure to present this document, which has been developed by the Nevada Department of Transportation (NDOT) with the support of law enforcement officials statewide. The information contained within provides valuable insight into the safety conditions of the state's roadways. With this material, the state can enhance and improve the various educational enforcement, and engineering programs to make our roads safer for the millions of people who use them each year.

For instance, the Nevada Department of Motor Vehicles and Public Safety (DMV&PS) will be able to improve its operations including the testing and licensing of drivers, the enforcement of traffic laws and motor carrier safety regulations, and the training of law enforcement personnel.

The Nevada Office of Traffic Safety (OTS) within DMV&PS utilizes this document to develop programs through federal grants targeting such things as speeding and drunk driving. Not only does the crash data highlight the need for these programs, it also helps evaluate their effectiveness.

The NDOT uses the data to improve roadway design and eliminate crash problems. Crash location information helps identify areas that may require modification and provide information for the design of future state highways.

In addition, local public and private agencies and organizations use the document to monitor the success of their efforts.

I hope you find this material as valuable as I do. It is an excellent example of the coordination necessary between state and local government working together to make Nevada's roads safer.

Sincerely,

A handwritten signature in blue ink that reads "Kenny C. Guinn".

EXECUTIVE SUMMARY

Although Nevada's crash rate per 100 million vehicle miles has been reduced in the past 10 years, Nevada still ranks among the top ten states with the highest crash rates in the nation. Nevada is the seventh largest state in size and 35th in population. More than 1.9 million people reside in our state with 55.5% located in urban areas and 44.5% living in rural communities. The growing population in Nevada and heavy tourism traffic are reflected in the trends and statistics presented herein.

Decrease in Accidents, Injuries and Fatalities

During the 2000 calendar year there was a total of 58,741 traffic crashes – 39,680 were property damage only (PDO); 18,795 were injury producing; and 266 were fatal. This reflects a .05% decrease in overall crashes from the total 59,075 recorded in 1999. Injury crashes decreased by .03%. Most significantly was the decrease in fatal crashes. That percentage dropped by 13.9%. In 2000 there were 323 traffic deaths, 29 less than the 352 recorded in 1999.

Rates Per 100 Million Vehicles

Nevada's crash rate per 100 million vehicle miles for fatal, injury and total crashes continues to decrease. In 1986 the fatal crash rate was 2.52, and in 2000 only 1.49. Nevada's injury crashes followed a similar pattern with a 1986 rate of 122.11 and a 2000 rate of 104.99 – a drop of 17.1%.

Counties

The four counties with the most crashes in 2000 were Clark County with 74.2% of the total, Washoe County with 15.4%, Elko County with 2.1% and Carson City with 2.1%. Esmeralda County had the least crashes with only 51 for the entire year. Clark County led the state in fatal, injury and property damage crashes with 59%, 77.5% and 72.8% respectively. Washoe County experienced the next highest numbers with 13%, 13.9% and 16.1% respectively. Clark County fatalities declined from the previous year from 195 to 188 traffic deaths. Washoe County's fatalities rose from the previous year from 41 to 42 traffic deaths.

Fatal Crashes

The three major types of fatal crashes are: ran off roadway-overturned, pedestrian, and angle collisions. Major risk factors contributing to fatal crashes are D.U.I. alcohol, inattentive driving and failure to yield.

Injury and Property Damage Only (PDO) Crashes

The three major injury crashes are: rear-end collision, angle collision, and left turn collision. For both injury and property damage only crashes the major contributing factors are: failure to yield, failure to reduce speed and inattentive driving.

Holiday Influences

With 18 fatalities each in 2000, New Year's Day and the 4th of July became the deadliest holiday periods. Nevada Day and Thanksgiving Day followed with 16 recorded fatalities each. Veteran's Day was the third deadliest time in 2000 with 14 persons killed.

Pedestrians

In 1998, there were 47 pedestrian deaths and 1,012 pedestrians injured. The figures jumped in 1999 when a total of 71 pedestrian lives were claimed and 1,086 injured. In 2000, Nevada experienced a decrease to 46 pedestrian fatalities and 938 injuries. Pedestrian fatalities in Washoe County decreased from 10 in 1999 to 6 in 2000 along with Clark County with a decrease of 48 in 1999 to 38 in 2000. There were 5 bicycle fatalities in 2000 – 3 occurred in Clark County, 1 in Elko County and 1 in Washoe County.

Effect on Economy

Over a billion dollar loss resulted from highway deaths and injuries in Nevada. The total estimated economic loss (based on national figures) resulting from traffic crashes in Nevada for the year 2000 is \$1,209,749,000.

PERCENTAGE OF CRASHES BY TYPE

REAR END, ANGLE AND SIDESWIPE-SAME DIRECTION COLLISIONS WERE THE MAJOR CRASH TYPES FOR 2000.

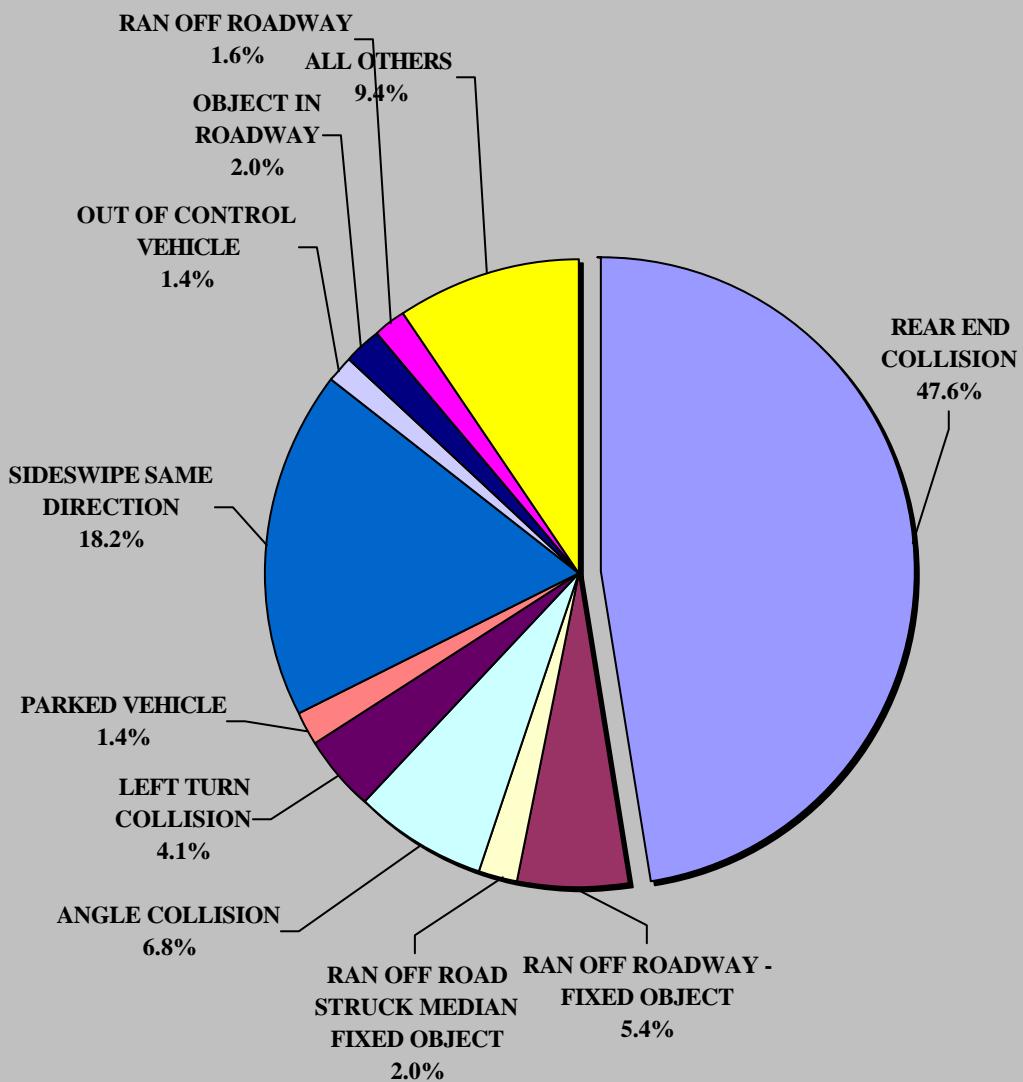

2000 CRASHES INVOLVING FIXED OBJECTS

DURING 2000 THE MOST FREQUENTLY STRUCK FIXED OBJECT ALONG NEVADA'S HIGHWAYS WERE CONCRETE BARRIER RAIL. FIXED OBJECT COLLISIONS COMPRISED 9.6% OF ALL 2000 CRASHES AS COMPARED TO 9.2% IN 1999.

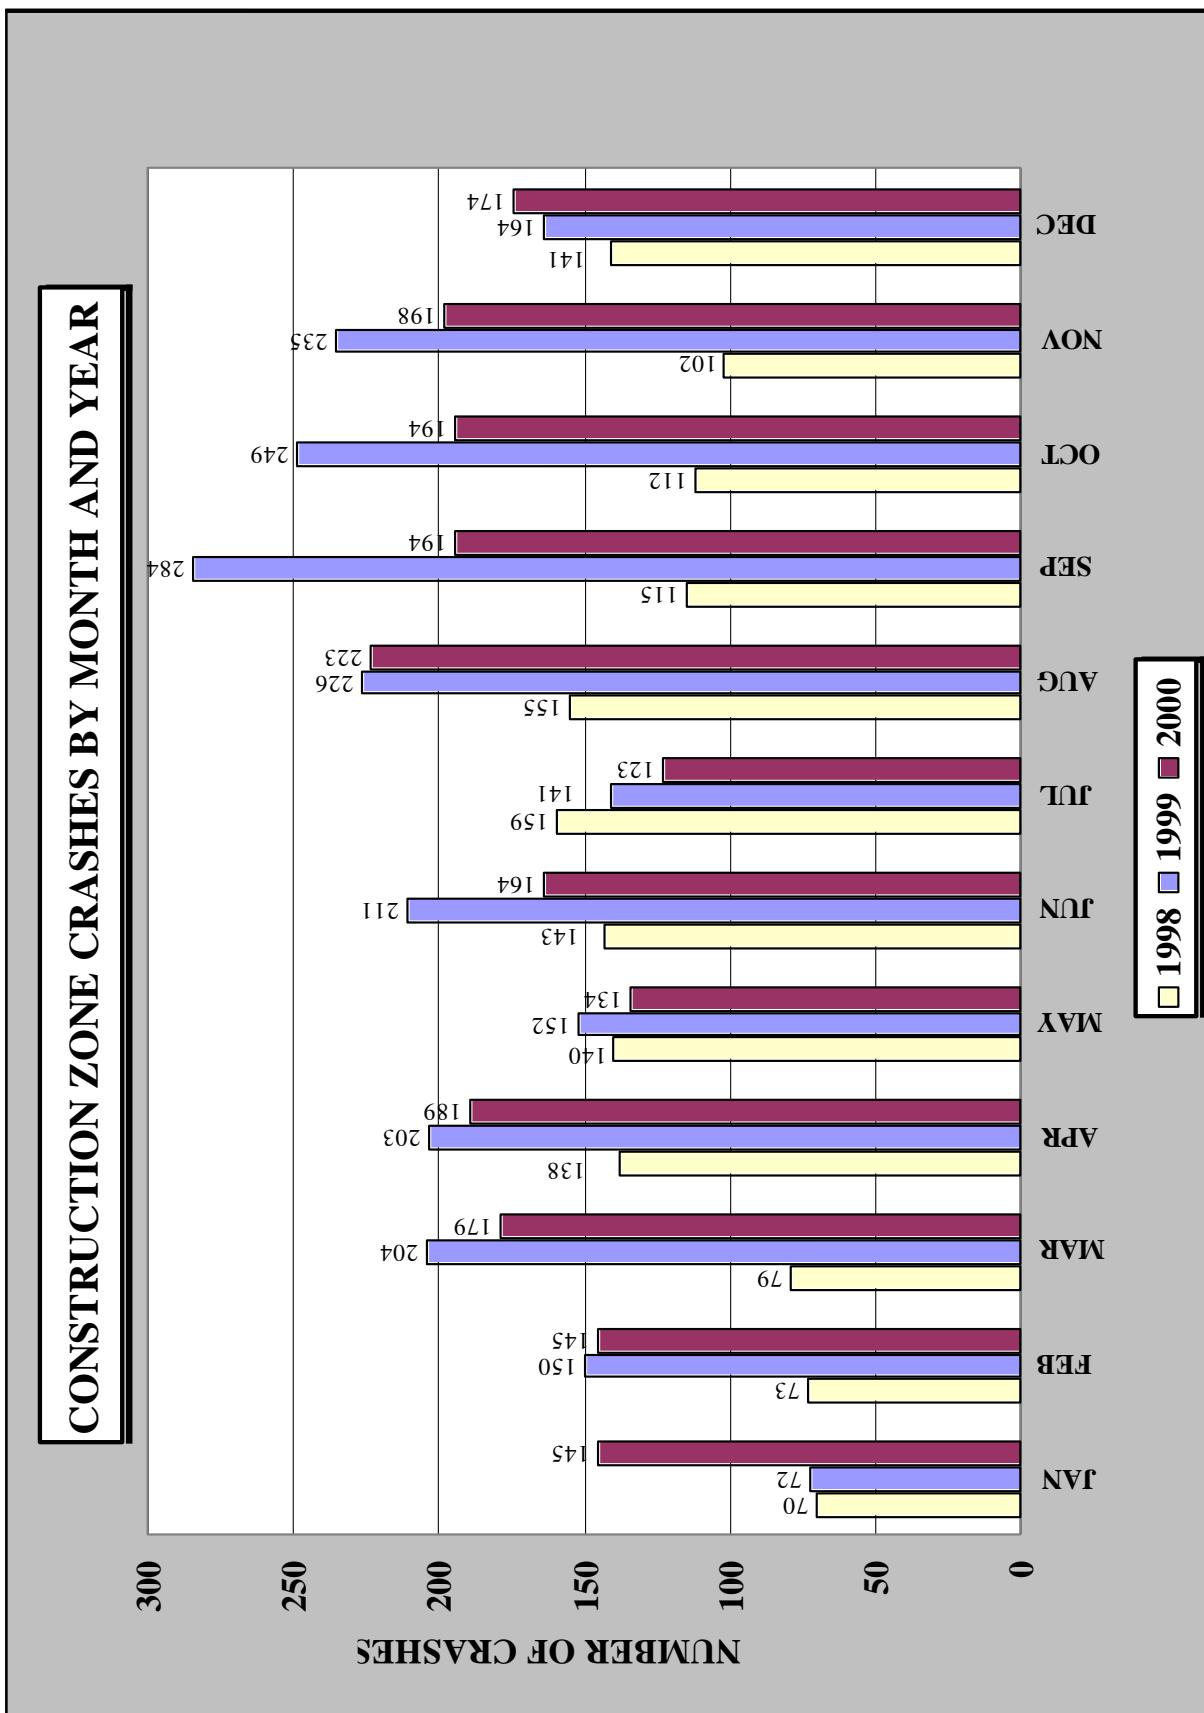

*NOTE: FIXED OBJECTS CAN ALSO BE INVOLVED IN OTHER CRASH TYPES SUCH AS REAR END, ANGLE, LEFT TURN ETC. WHEN A FIXED OBJECT IS HIT AFTER THE PRIMARY COLLISION.

CONSTRUCTION ZONE CRASHES BY TYPE 2000

2,062 TOTAL CRASHES

THERE WERE 941 INJURIES ASSOCIATED WITH 633 INJURY CRASHES AND 4 FATALITIES ASSOCIATED WITH 4 FATAL CRASHES WITHIN A CONSTRUCTION ZONE IN 2000.

TRENDS

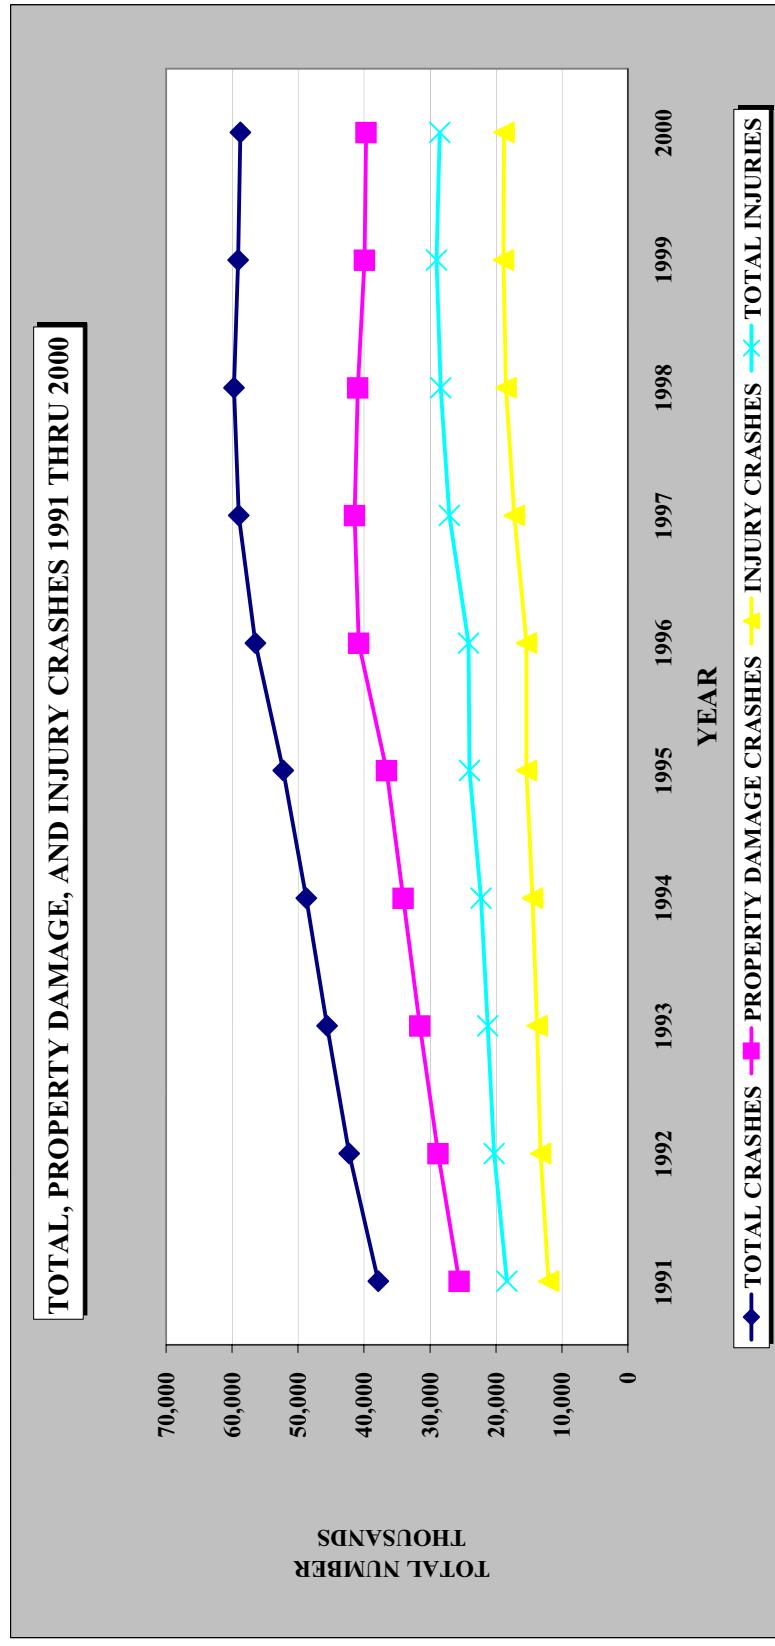

This section presents a series of data displays which identify trends in motor vehicle crashes by using historical data back to 1986. Trends displayed include; crash rates and annual vehicle miles driven, fatal rates for Nevada v. Nation, comparisons of annual crash rates v. population growth, fatal crash rates over the past 10 years, construction zone crash rates for the past 10 years, and crash types over the past 3 years.

2000 SUMMARY ANALYSIS

- ◆ In the past 10 years the total annual vehicle miles in Nevada has increased 70.3% while the fatal crash rate has decreased by 39.9% and the injury crash rate decreased by 8.2%.
- ◆ During the past three years the total annual vehicle miles in Nevada has increased by 8.9%, while the fatal crash rate has decreased by 22.4% and the injury rate increased by 6.7%. The national fatal crash rate decreased by 1.4% and the injury crash rate increased by 0.04%.
- ◆ From 1991 to 2000 Nevada's population increased 54.2% while its annual total crashes increased by 55.3% (fatal crashes increased by 2.3%).
- ◆ In the past ten years construction zone crashes have fluctuated between 1018 in 1991 to 2062 in 2000.
- ◆ From 1998 through 2000 rear end collisions accounted for 36.0% of all traffic crashes in Nevada. The next major crash type in the three year period was angle collisions, which accounted for 9.6%.

VEHICLES

This section presents a series of data displays, which identify types of vehicles involved in crashes and specific motorcycle crash information.

2000 SUMMARY ANALYSIS

- ◆ The standard passenger car was involved in more crashes than any other type of vehicle in 2000, followed by the pick-up truck and then the *small passenger car.
- ◆ Motorcycle fatal crashes increased from 1998 through 2000 - 12, 17 and 20 respectively (this does not include "moped" deaths).
- ◆ The counties with motorcycle fatalities in 2000 were Clark with 11, Washoe with 4, Lyon with 2, Carson, Churchill, Elko and Humboldt with 1.
- ◆ Total number of large trucks involved in crashes has decreased from 3,534 in 1998 to 3,339 in 2000. This reflects a 5.8% decrease.

*Small Passenger Car - Includes very small passenger cars such as a Toyota Corolla, VW Bug, Honda Civic or Del Sol, or any small two-door vehicle.

PEDESTRIAN & BICYCLE CRASHES

This section presents a series of data displays which identify pedestrian crashes by action and severity; top 10 pedestrian actions in crashes; pedestrian crash totals in relation to day, time, month, year, county, age and sex; alcohol involvement. It also displays bicycle crashes in relation to day, time, month, year, county, age, and sex.

2000 SUMMARY ANALYSIS

- ◆ In 2000 there were 917 pedestrian crashes. As a result, 938 people were injured and 46 were killed. In 258 or 28% of the crashes, the pedestrians were jaywalking (crossing not at an intersection where there was no crosswalk).
- ◆ The number of pedestrian fatalities dropped from 47 in 1998 to 46 in 2000.
- ◆ In 2000 most pedestrian crashes occurred from Noon to 9:00 PM with a peak from 3:00-6:00 PM.
- ◆ Pedestrians were more likely to be struck on Monday, Friday or Saturday in 2000. The least likely day to be struck was Sunday.
- ◆ More 35-44 year old males were injured in pedestrian crashes than in any other age group. The next highest age group for males was ages 45-54.
- ◆ More 35-44 year old females were injured in pedestrian crashes than in any other age group. The next highest age group for females was 45-54.
- ◆ From 1998 through 2000 bicycle fatalities caused by crashes with motor vehicles have stayed relatively the same with 5 in 1998, 8 in 1999 and 5 in 2000. Total injuries have decreased during the same time period from 754 to 710.
- ◆ Wednesday had the most bicycle/motor vehicle crashes in 2000 followed by Tuesday and Thursday. Most bicycle/motor vehicle crashes occur from Noon to 9:00 PM with a peak from 3:00 PM to 6:00 PM, similar to the pedestrian statistics above.

GLOSSARY

ALCOHOL INVOLVEMENT

Nevada defines a crash as alcohol-related or alcohol-involved if either a driver or a non-motorist (usually a pedestrian) had a measurable or estimated blood alcohol concentration (Blood Alcohol Content of 0.01 grams per deciliter or above).

Nevada defines a non-fatal crash as alcohol-related or alcohol-involved if police indicate on the police crash report that there is evidence of alcohol present. The code does not necessarily mean that a driver, passenger, or non-occupant was tested for alcohol.

ANNUAL VEHICLE MILES (AVM) - The number of miles driven on a given stretch of road for a 365 day period by all vehicles.

BAC- Blood Alcohol Content

BICYCLE INVOLVED - A traffic collision involving at least one bicycle.

BICYCLIST - Bicyclist victims include the driver (rider) and/or passenger of any device propelled exclusively by human power through a belt, chain or gears and having two or more wheels.

CONTRIBUTING FACTORS -The one element or driving action which, in the Officer's opinion, best describes the main cause of the collision.

CONSTRUCTION ZONE -An area usually marked by signs, barricades, or other devices indicating that highway construction or highway maintenance activities are ongoing.

CRASH – An event that produces fatality, injury and/or property damage, involves a motor vehicle in transport, and occurs on a traffic way or while the vehicle is still in motion after running off the traffic way. (Crash statistics in this book do not include Private Property Crashes)

CRASH SEVERITY

- 1. Fatal Crash** - A police-reported crash involving a motor vehicle in transport on a traffic way in which at least one person dies within 30 days of the crash.
- 2. Injury Crash** - A police-reported crash that involves a motor vehicle in transport on a traffic way in which no one died but at least one person was reported to have: (A) Serious visible injury: Victim requires transport from scene. (B) Minor visible injury: Abrasions, discoloration, swelling, obvious painful movement. (C) Non-visible Injury: Complaint of pain without visible signs of injury.
- 3. Property Damage Only (P.D.O.) Crash** - A police or driver reported crash involving a motor vehicle in transport on a traffic way in which no one involved in the crash suffered any injuries.

CRASH TYPE - The outcome of a crash that describes the events leading to or causing the crash.

ROADWAY FUNCTIONAL CLASSIFICATION - The classification describing the character of service the street or highway is intended to provide. Includes the following:

Interstate - Limited access divided facilities of at least four lanes designated by the Federal Highway Administration as part of the Interstate System.

Other Freeways and Expressways - All urban principal arterials with limited control of access not on the Interstate System.

Minor Arterial Rural/Urban - Streets and highways linking cities and larger towns in rural areas in distributing trips to small geographic areas in urban areas (Not penetrating identifiable neighborhoods).

Major Collector Rural - These roads link nearby larger towns or cities, or with routes or higher classification. Also serve the more important intra county travel corridors.
