INTRODUCTION

The purpose of this publication is to provide the Nevada Department of Transportation (NDOT), the Nevada Department of Motor Vehicles (DMV) and the Nevada Public Safety (DPS), and other State and Local authorities with information on Nevada's traffic crash problems. It is one in a series to be provided annually. The 2001 Nevada Traffic Crashes Book was solely produced from data extracted from NDOT's Crash Analysis System. The fatal crash data represented within may not be consistent with data produced from the Fatal Analysis Reporting System (FARS). The two systems were developed independently and are used for different purposes.

This document was prepared by personnel of the Safety/Traffic Division of NDOT; however, the publication and the statistics therein would not be possible if it were not for the dedicated men and women of Nevada's state and local law enforcement agencies who respond to the scene of the 59,000 plus traffic crashes annually on Nevada's streets and highways. After they treat the injured and secure the scene, they methodically and professionally record the facts on a traffic crash report form.

The culmination of their efforts then become the facts and statistics you see reflected in this publication. We appreciate and respect their work. In addition to recording the facts, they provide information necessary for problem identification. Problem identification drives the planning of specific enforcement, engineering, and education efforts, which can be applied to decrease the number and severity of crashes on our streets and highways. Subsequently, lives can be saved, injuries prevented, and property damage and economic loss can be significantly reduced.

STATE OF NEVADA
OFFICE OF THE GOVERNOR

KENNY C. GUINN
Governor

101 N. Carson City, Nevada 89701
Telephone: (775) 684-5670 • Fax: (775) 684-5683

Dear Reader:

It is my pleasure to present this document, which has been developed by the Nevada Department of Transportation (NDOT) with the support of law enforcement officials statewide. The information contained within provides valuable insight into the safety conditions of the state's roadways. With this material, the state can enhance and improve the various educational enforcement, and engineering programs to make our roads safer for the millions of people who use them each year.

For instance, the Nevada Department of Motor Vehicles and Public Safety (DMV&PS) will be able to improve its operations including the testing and licensing of drivers, the enforcement of traffic laws and motor carrier safety regulations, and the training of law enforcement personnel.

The Nevada Office of Traffic Safety (OTS) within DMV&PS utilizes this document to develop programs through federal grants targeting such things as speeding and drunk driving. Not only does the crash data highlight the need for these programs, it also helps evaluate their effectiveness.

The NDOT uses the data to improve roadway design and eliminate crash problems. Crash location information helps identify areas that may require modification and provide information for the design of future state highways.

In addition, local public and private agencies and organizations use the document to monitor the success of their efforts.

I hope you find this material as valuable as I do. It is an excellent example of the coordination necessary between state and local government working together to make Nevada's roads safer.

Sincerely,

A handwritten signature in blue ink that reads "Kenny C. Guinn".

Kenny C. Guinn
Governor

EXECUTIVE SUMMARY

Although Nevada's crash rate per 100 million vehicle miles has been reduced in the past 10 years, Nevada still ranks among the top ten states with the highest crash rates in the nation. Nevada is the seventh largest state in size and 35th in population. More than 2.1 million people reside in our state with 55.5% located in urban areas and 44.5% living in rural communities. The growing population in Nevada and heavy tourism traffic are reflected in the trends and statistics presented herein.

Decrease in Accidents, Injuries and Fatalities

During the 2001 calendar year there was a total of 59,690 traffic crashes – 40,229 were property damage only (PDO); 19,176 were injury producing; and 285 were fatal. This reflects a 1.6% increase in overall crashes from the total 58,741 recorded in 2000. Injury crashes increased by 2.0%. Most significantly was the decrease in fatalities. That percentage dropped by 2.8%. In 2001 there were 314 traffic deaths, 9 less than the 323 recorded in 2000.

Rates Per 100 Million Vehicles

Nevada's crash rate per 100 million vehicle miles for fatal, injury and total crashes continues to decrease. In 1987 the fatal crash rate was 2.80, and in 2001 only 1.55. Nevada's injury crashes followed a similar pattern with a 1987 rate of 122.98 and a 2001 rate of 104.50 – a drop of 18.5%.

Counties

The four counties with the most crashes in 2001 were Clark County with 73.2% of the total, Washoe County with 16.2%, Carson City with 2.2% and Elko County with 2.0%. Storey County had the least crashes with only 75 for the entire year. Clark County led the state in fatal, injury and property damage crashes with 59.5%, 78.1% and 71.6% respectively. Washoe County experienced the next highest numbers with 13%, 14.6% and 17.0% respectively. Clark County fatalities increased by one from the previous year to 189 traffic deaths. Washoe County's fatalities decreased from the previous year from 42 to 38 traffic deaths.

Fatal Crashes

The three major types of fatal crashes are: ran off roadway-overturned, pedestrian, and angle collisions. Major risk factors contributing to fatal crashes are failure to yield, D.U.I. alcohol and inattentive driving.

Injury and Property Damage Only (PDO) Crashes

The three major injury crashes are: rear-end collision, angle collision, and left turn collision. For both injury and property damage only crashes the major contributing factors are: failure to yield, failure to reduce speed and inattentive driving.

Holiday Influences

From 1999 through 2001, the 4th of July, Nevada Day and Veteran's Day were the deadliest holiday periods with 18 fatalities annually for each year. Thanksgiving Day followed with 17 fatalities recorded. New Year's Eve was the third deadliest time in 2001 with 14 persons killed.

Pedestrians

In 1999, there were 71 pedestrian deaths and 1,086 pedestrians injured. The figures dropped in 2000 when a total of 46 pedestrian lives were claimed and 938 injured. In 2001, Nevada experienced a decrease to 45 pedestrian fatalities and an increase to 982 injuries. Pedestrian fatalities in Washoe County increased from 6 in 2000 to 10 in 2001. Clark County had a decrease of 38 in 2000 to 32 in 2001. There were 4 bicycle fatalities in 2001 – 3 occurred in Clark County and 1 in Washoe County.

Effect on Economy

Over a billion dollar loss resulted from highway deaths and injuries in Nevada. The total estimated economic loss (based on national figures) resulting from traffic crashes in Nevada for the year 2001 is \$1,265,734,500.

TRENDS

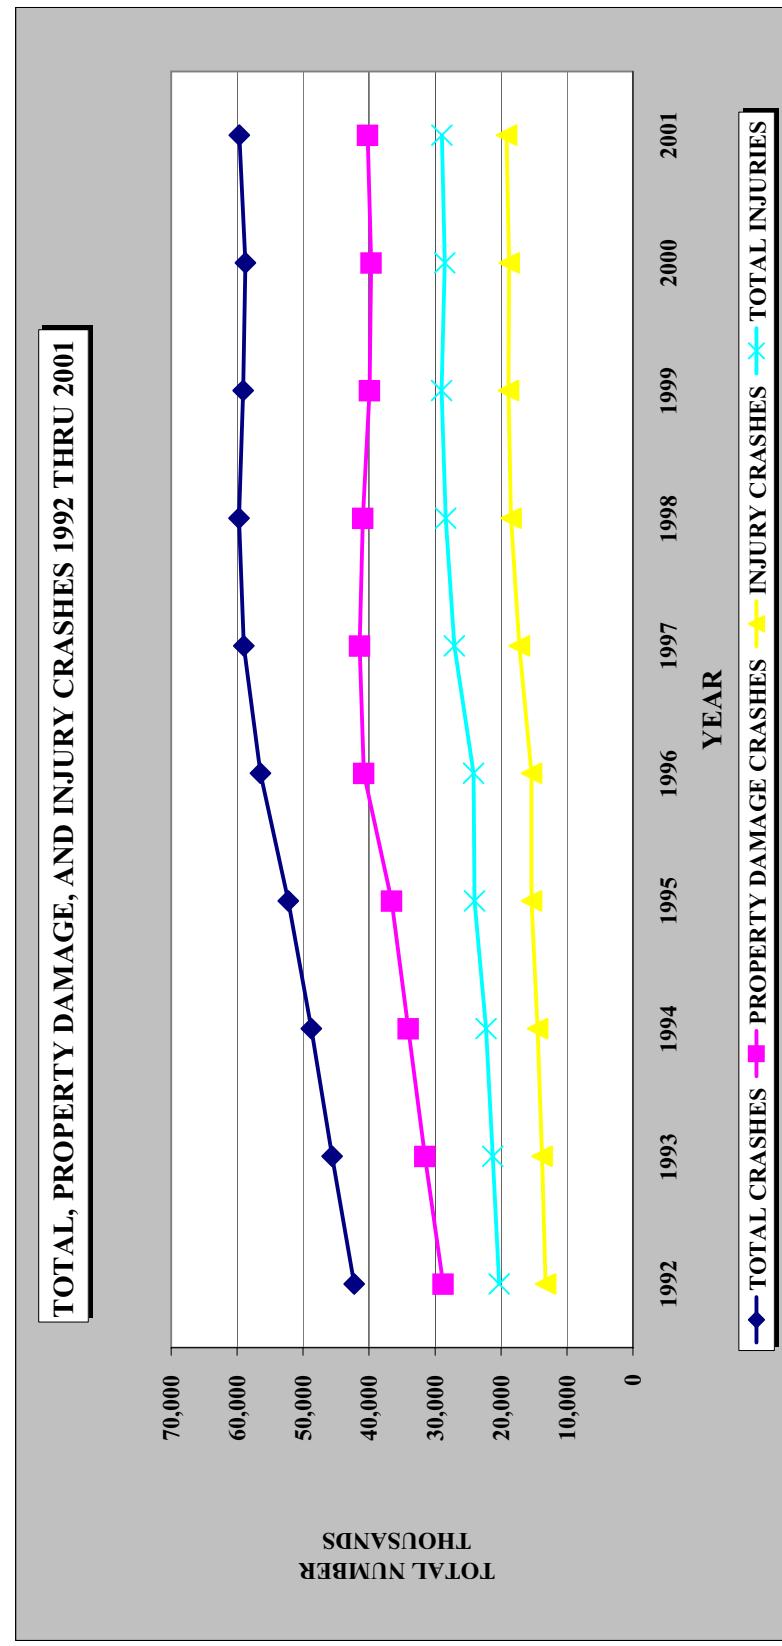

This section presents a series of data displays which identify trends in motor vehicle crashes by using historical data back to 1987. Trends displayed include; crash rates and annual vehicle miles driven, fatal rates for Nevada v. Nation, comparisons of annual crash rates v. population growth, fatal crash rates over the past 10 years, construction zone crash rates for the past 10 years, and crash types over the past 3 years.

2001 SUMMARY ANALYSIS

- ◆ In the past 10 years the total annual vehicle miles in Nevada has increased 68.9% while the fatal crash rate has decreased by 25.5% and the injury crash rate decreased by 14.1%.
- ◆ From 1999 through 2001 the total annual vehicle miles in Nevada have increased by 6.1%, while the fatal crash rate has decreased by 12.9% and the injury crash rate decreased by 3.9%. During the same time period the national fatal crash rate decreased by 4.0% and the injury crash rate decreased by 3.2%.
- ◆ From 1992 to 2001 Nevada's population increased 56.7% while its annual total crashes increased by 41.3% (fatal crashes increased by 25.6%).
- ◆ In the past ten years construction zone crashes have increased from 1053 in 1992 to 2415 in 2001.
- ◆ From 1999 through 2001 rear end collisions accounted for 36.5% of all traffic crashes in Nevada. The next major crash type in the three year period was angle collisions, which accounted for 14.5%.

VEHICLES

This section presents a series of data displays, which identify types of vehicles involved in crashes and specific motorcycle crash information.

2001 SUMMARY ANALYSIS

- ◆ The standard passenger car was involved in more crashes than any other type of vehicle in 2001. Pick-up trucks and small passenger cars ranked number 2 and 3 respectively. Single unit trucks ranked number 4.
- ◆ The number of motorcycle fatal crashes remained unchanged in 2000 and 2001 with 20 crashes each year. There were 17 in 1999, (these numbers do not include "moped" fatal crashes).
- ◆ The counties with motorcycle fatalities in 2001 were Clark with 13, Washoe with 4, Esmeralda with 2, and Storey with 1.
- ◆ Total number of large trucks involved in crashes has decreased from 3,792 in 1999 to 3,454 in 2001. This reflects a 8.9% decrease.

*Small Passenger Car-- Includes very small passenger cars such as the Toyota Corolla, VW Bug, Honda Civic or Del Sol, or any other small two-door vehicle.

GLOSSARY

ALCOHOL INVOLVEMENT

Nevada defines a crash as alcohol-related or alcohol-involved if either a driver or a non-motorist (usually a pedestrian) had a measurable or estimated blood alcohol concentration (Blood Alcohol Content of 0.01 grams per deciliter or above).

Nevada defines a non-fatal crash as alcohol-related or alcohol-involved if police indicate on the police crash report that there is evidence of alcohol present. The code does not necessarily mean that a driver, passenger, or non-occupant was tested for alcohol.

ANNUAL VEHICLE MILES (AVM) - The number of miles driven on a given stretch of road for a 365 day period by all vehicles.

BAC- Blood Alcohol Content

BICYCLE INVOLVED - A traffic collision involving at least one bicycle.

BICYCLIST - Bicyclist victims include the driver (rider) and/or passenger of any device propelled exclusively by human power through a belt, chain or gears and having two or more wheels.

CONTRIBUTING FACTORS -The one element or driving action which, in the Officer's opinion, best describes the main cause of the collision.

CONSTRUCTION ZONE -An area usually marked by signs, barricades, or other devices indicating that highway construction or highway maintenance activities are ongoing.

CRASH – An event that produces fatality, injury and/or property damage, involves a motor vehicle in transport, and occurs on a traffic way or while the vehicle is still in motion after running off the traffic way. (Crash statistics in this book do not include Private Property Crashes)

CRASH SEVERITY

1. Fatal Crash - A police-reported crash involving a motor vehicle in transport on a traffic way in which at least one person dies within 30 days of the crash.

2. Injury Crash - A police-reported crash that involves a motor vehicle in transport on a traffic way in which no one died but at least one person was reported to have: (A) Serious visible injury: Victim requires transport from scene. (B) Minor visible injury: Abrasions, discoloration, swelling, obvious painful movement. (C) Non-visible Injury: Complaint of pain without visible signs of injury.

3. Property Damage Only (P.D.O.) Crash - A police or driver reported crash involving a motor vehicle in transport on a traffic way in which no one involved in the crash suffered any injuries.

GLOSSARY CONTINUED

DRIVER - The person driving or in physical control of a motor vehicle.

DRIVER 1 - The person in physical control of the first vehicle reported on the crash report form. Normally assumed to be the at fault driver.

DRIVER 2 - The person in physical control of the second vehicle reported on the crash report form.

DRUG INVOLVED - Any motor vehicle traffic crash where a driver or pedestrian had used drugs.

DUI - Driving under the influence of alcohol. A DUI is indicated by a blood alcohol content (BAC) of .10 or greater.

EJECTED - Refers to occupants being totally or partially thrown from the vehicle as a result of an impact or rollover.

FIXED OBJECTS - Stationary structures or substantial vegetation attached to the terrain.

GROSS VEHICLE WEIGHT RATING (GVWR) - The maximum rated capacity of a vehicle, including the weight of the base vehicle, all added equipment, driver and passengers, and all cargo loaded into or on the vehicle. Actual weight may be less than or greater than GVWR.

MOTOR VEHICLE - A mechanically or electrically powered device not operated on rails, upon which or by which any person or property may be transported or drawn upon a roadway is a motor vehicle.

GLOSSARY CONTINUED

ROADWAY FUNCTIONAL CLASSIFICATION - The classification describing the character of service the street or highway is intended to provide. Includes the following:

Interstate - Limited access divided facilities of at least four lanes designated by the Federal Highway Administration as part of the Interstate System.

Other Freeways and Expressways - All urban principal arterials with limited control of access not on the Interstate System.

Urban Other Principal Arterial - Major streets or highways, many with multi-lane or freeway design, serving high-volume traffic corridor movements that connect major generators of travel.

Minor Arterial Rural/Urban - Streets and highways linking cities, and larger towns in rural areas, to form an integrated network providing interstate and inter county service.

Major Collector Rural - These roads link nearby larger towns or cities, or with routes of higher classification. Also serve the more important intra county travel corridors.

Minor Collector Rural - These routes collect traffic from local roads and connect to major collectors and arterials. Also provide service to the remaining smaller communities.

Collector Urban - In urban areas, streets providing direct access to neighborhoods as well as direct access to arterials.

Local Urban/Rural - Streets whose primary purpose is feeding higher order systems and providing direct access with little or no through traffic.

RURAL AREA - Rural areas are comprised of all areas outside the city limit boundaries of urbanized area.
